Table of contents

Abstract	7
Introduction	7
The 100 New Species	9
<i>Acarospora flavisparsa</i> V.J.Rico & Candan, sp. nov. (Fig. 2A–B) Mycobank MB 518279	9
<i>Acarospora janae</i> K.Knudsen, sp. nov. (Fig. 2C) Mycobank MB 516796	11
<i>Aderkomycetes thailandicus</i> Papong, Boonpragob & Lücking, sp. nov. (Fig. 2D) Mycobank MB 517730	11
<i>Amandinea maritima</i> Giralt, van den Boom & Elix, sp. nov. (Fig. 2E–F) Mycobank MB 517731	13
<i>Ampliotrema cocosense</i> Lücking & Chaves, sp. nov. (Fig. 3A) Mycobank MB 517732	14
<i>Anomomorpha lecanorina</i> Sipman, sp. nov. (Fig. 3B–C) Mycobank MB 517733	15
<i>Anomomorpha tuberculata</i> Lücking, Umaña & Will-Wolf, sp. nov. (Fig. 3D) Mycobank MB 517734	17
<i>Aspicilia mansouri</i> Sohrabi, sp. nov. (Fig. 3E–F) Mycobank MB 518502	17
<i>Bacidina sorediata</i> Seaward & Lücking, sp. nov. (Fig. 4A) Mycobank MB 517735	19
<i>Badimia multiseptata</i> Papong & Lücking, sp. nov. (Fig. 4B) Mycobank MB 517736	19
<i>Badimia vezdana</i> Lücking, Farkas & Wirth, sp. nov. (Fig. 4C–D) Mycobank MB 517737	20
<i>Biatora epirotica</i> Printzen & T.Sprib., sp. nov. (Fig. 4E–F) Mycobank MB 519464	22
<i>Buellia sulphurica</i> Bungartz & Aptroot, sp. nov. (Fig. 5A–B) Mycobank MB 517738	24
<i>Bunodophoron pinnatum</i> Wedin, sp. nov. (Fig. 5C) Mycobank MB 517739	25
<i>Byssoloma spinulosum</i> Sérus., sp. nov. (Fig. 5D) Mycobank MB 517740	25
<i>Calopadia cinereopruinosa</i> Bungartz & Lücking, sp. nov. (Fig. 5E–F) Mycobank MB 517741	27
<i>Calopadia editae</i> Vězda ex Chaves & Lücking, sp. nov. (Fig. 6A) Mycobank MB 517742	27
<i>Caloplaca brownlieae</i> S.Y.Kondr., Elix & Kärnefelt, sp. nov. (Fig. 6B) Mycobank MB 517743	28
<i>Caloplaca decipiooides</i> Arup, sp. nov. (Fig. 6C) Mycobank MB 517744	29
<i>Caloplaca digitaurea</i> Søgaard, Søchting & Sancho, sp. nov. (Fig. 6D–E) Mycobank MB 517745	31
<i>Caloplaca magnussoniana</i> S.Y.Kondr., Kärnefelt & A.Thell, sp. nov. (Fig. 6F) Mycobank MB 517746	32
<i>Caloplaca mereschkowskiana</i> S.Y.Kondr. & Kärnefelt, sp. nov. (Fig. 7A) Mycobank MB 517747	33
<i>Caloplaca yorkensis</i> S.Y.Kondr. & Kärnefelt, sp. nov. (Fig. 7B) Mycobank MB 517748	34
<i>Calvitimela uniseptata</i> G.Thor, sp. nov. (Fig. 7C) Mycobank MB 517749	36
<i>Chapsa microspora</i> Kalb, sp. nov. (Fig. 7D) Mycobank MB 517750	36
<i>Chapsa psoromica</i> M.Cáceres, Santos de Jesus & Santos Vieira, sp. nov. (Fig. 7E) Mycobank MB 517751	37
<i>Chapsa rubropulveracea</i> Hale ex Mangold, Lücking & Lumbsch, sp. nov. (Fig. 7F) Mycobank MB 517753	38
<i>Chapsa thallotrema</i> Lücking & N.Salazar, sp. nov. (Fig. 8A–B) Mycobank MB 517753	40
<i>Chiodecton pustuliferum</i> Aptroot, sp. nov. (Fig. 8C–D) Mycobank MB 517754	40
<i>Cladonia mongkolsukii</i> Parnmen & Ahti, sp. nov. (Fig. 8E–F) Mycobank MB 517755	42
<i>Clypeopyrenis porinoides</i> Komposch, J.E.Hern. & Rosabal, sp. nov. (Fig. 9A) Mycobank MB 517756	43
<i>Coccocarpia delicatula</i> Bungartz, Ziemmeck & Lücking, sp. nov. (Fig. 9B) Mycobank MB 517757	45
<i>Coenogonium flammeum</i> L.I.Ferraro, Michlig & Lücking, sp. nov. (Fig. 9C–D) Mycobank MB 517758	45
<i>Cresponea ancistrosporelloides</i> Sparrius & Sipman, sp. nov. (Fig. 9E–F) Mycobank MB 517759	46
<i>Crocynia micropyllina</i> Aptroot, sp. nov. (Fig. 10A–B) Mycobank MB 517760	47
<i>Dictyonema hernandezii</i> Lücking, Lawrey & Dal-Forno, sp. nov. (Fig. 10C) Mycobank MB 517761	47
<i>Dictyonema hirsutum</i> Moncada & Lücking, sp. nov. (Fig. 10D) Mycobank MB 517762	49
<i>Diorygma microsporum</i> M.Cáceres & Lücking, sp. nov. (Fig. 10E) Mycobank MB 517763 5	0
<i>Diorygma sticticum</i> Sutjaritturakan, Kalb & Lücking, sp. nov. (Fig. 10F) Mycobank MB 517764	50
<i>Echinoplaca pernambucensis</i> Øvstedral & Elix, sp. nov. (Fig. 11A) Mycobank MB 517765	51
<i>Echinoplaca schizidiifera</i> J.E.Hern. & Lücking, sp. nov. (Fig. 11B–C) Mycobank MB 517766	52
<i>Eremithallus marusae</i> R.Miranda, Gaya & Lücking, sp. nov. (Fig. 11D) Mycobank MB 517767	52
<i>Everniastrum constictovexans</i> Sipman, sp. nov. (Fig. 11E) Mycobank MB 517768	54

<i>Fellhanera borbonica</i> Sérus., van den Boom & Brand, sp. nov. (Fig. 11F) Mycobank MB 517769	55
<i>Fibrillithecis sprucei</i> Mangold, Lücking & Lumbsch, sp. nov. (Fig. 12A) Mycobank MB 517770	56
<i>Fissurina astroisidiata</i> Herrera-Campos & Lücking, sp. nov. (Fig. 12B–C) Mycobank MB 517771	57
<i>Fissurina nigrolabiata</i> Rivas Plata, Bawingan & Lücking, sp. nov. (Fig. 12D) Mycobank MB 517772	58
<i>Fissurina subcomparimuralis</i> Common & Lücking, sp. nov. (Fig. 12E) Mycobank MB 517773	59
<i>Graphis caribica</i> Lücking, sp. nov. (Fig. 12F) Mycobank MB 517774	60
<i>Graphis cerradensis</i> Marcelli, Benatti & Lücking, sp. nov. (Fig. 13A–B) Mycobank MB 517775	60
<i>Graphis itatiaiensis</i> Nelsen, Lücking & Spielmann, sp. nov. (Fig. 13C) Mycobank MB 517776	62
<i>Graphis marusae</i> B.Peña & Lücking, sp. nov. (Fig. 13D) Mycobank MB 517777	63
<i>Gyalideopsis chicaque</i> Moncada & Lücking, sp. nov. (Fig. 13E) Mycobank MB 517778	64
<i>Gyrotrema papillatum</i> Lücking, sp. nov. (Fig. 13F) Mycobank MB 517779	64
<i>Harpidium gavilaniae</i> Amo, Pérez-Ortega & A. Crespo, sp. nov. (Fig. 14A–B) Mycobank MB 517780	65
<i>Hypogymnia amplexa</i> Goward, Björk & Wheeler, sp. nov. (Fig. 14C) Mycobank MB 517781	65
<i>Hypotrichyna guatemalensis</i> Elix & van den Boom, sp. nov. (Fig. 14D) Mycobank MB 517782	68
<i>Hypotrichyna indica</i> Divakar, Lumbsch, Upreti & A.Crespo, sp. nov. (Fig. 14E–F) Mycobank MB 518238	68
<i>Hypotrichyna lueckingii</i> Sipman, sp. nov. (Fig. 15A) Mycobank MB 517783	69
<i>Hypotrichyna paracitrella</i> Sipman & Palice, sp. nov. (Fig. 15B) Mycobank MB 517784	71
<i>Hypotrichyna paraphyscioides</i> Sipman, sp. nov. (Fig. 15C) Mycobank MB 517785	72
<i>Hypotrichyna parasinuosa</i> Sipman & Palice, sp. nov. (Fig. 15D) Mycobank MB 517786	73
<i>Icmadophila eucalypti</i> Kantvilas, sp. nov. (Fig. 15E–F) Mycobank MB 517787	73
<i>Krogia microphylla</i> Timdal, sp. nov. (Fig. 16A–B) Mycobank MB 517788	74
<i>Lecanora mugambii</i> Kirika, I.Schmitt, Fankhauser & Lumbsch, sp. nov. (Fig. 16C–D) Mycobank MB 517789	76
<i>Lecanora printzenii</i> Pérez-Ortega, Vivas & Hafellner, sp. nov. (Fig. 16E) Mycobank MB 517790	77
<i>Lecanora xanthoplumosella</i> Lumbsch & Elix, sp. nov. (Fig. 16F) Mycobank MB 517791	78
<i>Lecidea lygommella</i> Elix, sp. nov. (Fig. 17A) Mycobank MB 517792	79

Abstract

The number of undescribed species of lichenized fungi has been estimated at roughly 10,000. Describing and cataloging these would take the existing number of taxonomists several decades; however, the support for taxonomy is in decline worldwide. In this paper we emphasize the dire need for taxonomic expertise in lichenology. We bring together 103 colleagues from institutions worldwide to describe a total of 100 new species of lichenized fungi, representing a wide taxonomic and geographic range. The newly described species are: *Acarospora flavisparsa*, *A. janae*, *Aderkomycetes thailandicus*, *Amandinea maritima*, *Ampliotrema cocosense*, *Anomomorpha lecanorina*, *A. tuberculata*, *Aspicilia mansouri*, *Bacidina sorediata*, *Badimia multiseptata*, *B. vezdana*, *Biatora epirotica*, *Buellia sulphurica*, *Bunodophoron pinnatum*, *Byssoloma spinulosum*, *Calopadia cinereopruinosa*, *C. editae*, *Caloplaca brownlieae*, *C. decipioides*, *C. digitaurea*, *C. magnussoniana*, *C. mereschkowskiana*, *C. yorkensis*, *Calvitimela uniseptata*, *Chapsa microspora*, *C. psoromica*, *C. rubropulveracea*, *C. thallotrema*, *Chiadecton pustuliferum*, *Cladonia mongkolsukii*, *Clypeopyrenis porinoides*, *Coccocarpia delicatula*, *Coenogonium flammeum*, *Cresponea ancistrosporelloides*, *Crocynia microphyllina*, *Dictyonema hernandezii*, *D. hirsutum*, *Diorygma microsporum*, *D. sticticum*, *Echinoplaca pernambucensis*, *E. schizidiifera*, *Eremithallus marusae*, *Everniastrum constictovexans*, *Fellhanera borbonica*, *Fibrillithecis sprucei*, *Fissurina astroisidiata*, *F. nigrolabiata*, *F. subcomparimuralis*, *Graphis caribica*, *G. cerradensis*, *G. itatiaiensis*, *G. marusa*, *Gyalideopsis chicaque*, *Gyrotrema papillatum*, *Harpidium gavilaniae*, *Hypogymnia amplexa*, *Hypotrachyna guatemalensis*, *H. indica*, *H. lueckingii*, *H. paracitrella*, *H. paraphyscioides*, *H. parasinuosa*, *Icmadophila eucalypti*, *Krogia microphylla*, *Lecanora mugambii*, *L. printzenii*, *L. xanthoplumosella*, *Lecidea lygommella*, *Lecidella greenii*, *Lempholemma corticola*, *Lepraria sekikaica*, *Lobariella sipmanii*, *Megalospora austropacifica*, *M. galapagoensis*, *Menegazzia endocrocea*, *Myriotrema endoflavescens*, *Ocellularia albobullata*, *O. vizcayensis*, *Ochrolechia insularis*, *Opegrapha viridipruinosa*, *Pannaria phyllidiata*, *Parmelia asiatica*, *Pertusaria conspersa*, *Phlyctis psoromica*, *Placopsis imshaugii*, *Platismatia wheeleri*, *Porina huainamduagensis*, *Ramalina hyrcana*, *R. stoffersii*, *Relicina colombiana*, *Rhizocarpon diploschistidina*, *Sticta venosa*, *Sagenidiopsis isidiata*, *Tapellaria albomarginata*, *Thelotrema fijiense*, *Tricharia nigriuncinata*, *Usnea galapagona*, *U. pallidocarpa*, *Verrucaria rhizicola*, and *Xanthomendoza rosmarieae*. In addition, three new combinations are proposed: *Fibrillithecis dehiscens*, *Lobariella botryoides*, and *Lobariella pallida*.

Introduction

The number of species inhabiting our planet is estimated to be between 2–10 and 30–100 million (May 1988, Curtis *et al.* 2002, Rosenzweig *et al.* 2003). About 2.2 million are recorded, including 400,000 plants, 100,000 fungi (including 17,500 lichens), 1.5 million animals, 200,000 protists, and 10,000 bacteria (Prance *et al.* 2000, Govaerts 2001, Pitman & Jørgensen 2002, Scotland & Wortley 2003, Schloss *et al.* 2004, Williamson & Day 2007, Feuerer & Hawksworth 2007, Kirk *et al.* 2008). The total number of fungi is estimated at 700,000 to 1.5 million species (Hawksworth 1991, 2001, Mueller & Schmit 2007). The majority of the undescribed fungal species are expected in poorly studied areas, such as tropical forests or in under-explored habitats, for example living on or in insects, plants or lichens (Hawksworth & Rossman 1997, Frohlich & Hyde 1999, Taylor *et al.* 2000a, Sipman & Aptroot 2001, Lawrey & Diederich 2003, Arnold & Lutzoni 2007). There is also a growing body of evidence suggesting that the approach to current species recognition, which is based largely on morphology and chemistry, significantly underestimates the number of species. Phylogenetic studies indicate that numerous distinct lineages may be hidden under a single species name (Roy *et al.* 1998, Grube & Kroken 2000, Kroken & Taylor 2001, Koufopanou *et al.* 2001, Peterson *et al.* 2001, Cruse *et al.* 2002, Molina *et al.* 2004, Douhan & Rizzo 2005, Pringle *et al.* 2005, Geml *et al.* 2006, Kauserud *et al.* 2006, Matute *et al.* 2006, Arguello *et al.* 2007b, Giraud *et al.* 2008, Wirtz *et al.* 2008, Baloch & Grube 2009).

Even with a conservative estimate of ten million existing species, including perhaps around one million fungi, the number of eight million remaining undiscovered species, including 900,000 fungi, is mind-boggling. Assuming that modern taxonomic revisions were produced mainly in the past 50 years, it would
