Abstract

The genera *Anoectangium*, *Gymnostomum*, *Hymenostylium*, and *Molendoa*, included in the tribe Pleuroveisieae, are studied in South America. After a thorough revision of both herbarium material and our own recent collections from the area, we recognize eight species among these genera. In *Hymenostylium*, *H. recurvirostrum* and *H. aurantiacum* are accepted, the latter newly reported for the territory. *Hymenostylium contextum* and *H. kunzeanum* are placed in the synonymy of *H. recurvirostrum* and *Weissia stillicidiorum* and *Hydrogonium taylorii* of *H. aurantiacum*. In *Gymnostomum*, only *G. calcareum* is recognized in South America. *Gymnostomum tenerrimum* is considered a synonym of *G. calcareum* and *G. aeruginosum* is tentatively excluded from the area. In *Molendoa*, *M. sendtneriana* and *M. peruviana* comb. nov. are recognized. *Anoectangium calidum*, *Molendoa andina*, *M. subobtusifolia*, and *Trichostomum glaucoviride* are proposed as synonyms of *M. sendtneriana* and *Anoectangium herzogii*, *A. platyphyllum*, *A. lechlerianum* and *Triquetrella cucullata* of *M. peruviana*. *Molendoa fuegiana* and *M. guentheri* are excluded from *Molendoa* and considered synonyms of *Didymodon australasiae*. In *Anoectangium*, *A. aestivum*, *A. euchloron* and *A. stracheyanum* are accepted. *Anoectangium brachiphyllum* and *Zygodon tenellus* are treated as synonyms of *A. euchloron*, *A. pflanzii* of *A. aestivum* and *A. lechlerianum* var. *laetior* and *Zygodon linearis* of *A. stracheyanum*. *Anoectangium herzogii*, *A. calidum*, and *A. lechlerianum* var. *limbatulum* are excluded from *Anoectangium*. The first is considered conspecific with *Molendoa peruviana* and the rest with *M. sendtneriana*. The genus *Tuerckheimia* represented by *T. guatemalensis* is excluded from South America. Lectotypes for twenty two names (*Anoectangium euchloron* f. *elata*, *A. herzogii*, *A. lechlerianum*, *A. lechlerianum* var. *laetior*, *A. lechlerianum* var. *limbatulum*, *A. patagonicum*, *A. pflanzii*, *A. sendtnerianum*, *A. sordidum*, *A. tenerrimum*, *Gymnostomum longirostre*, *G. recurvirostrum*, *Hymenostylium contextum*, *H. longopulvinatum*, *Molendoa fuegiana*, *Trichostomum glaucoviride*, *Triquetrella cucullata*, *Weissia stillicidiorum*, *W. venezuelensis*, *Zygodon excelsus*, *Z. linearis* and *Z. tenellus*) are proposed. A key, descriptions, illustrations and distribution maps are provided for each species.

Key words: *Anoectangium*, *Gymnostomum*, *Hymenostylium*, lectotypes, *Molendoa*, new records, taxonomy, *Tuerckheimia*

Introduction

Pleuroveisieae was proposed as a subfamily of Pottiaceae by Limpricht (1886), and later treated as a tribe within Eucladioideae by Chen (1941). This latter author included three genera in the tribe Pleuroveisieae: *Pleuroweisia* Limpr. ex Schliephacke (1885: 359), *Anoectangium* Schwägrichen (1811: 33) and *Molendoa* Lindberg (1878: 29), and seven in Eucladioideae: *Eucladium* Bruch & Schimper (1846: 93), *Gymnostomum* Nees von Esenbeck & Hornschuch (1823: 112), *Gyroweisia* Schimper (1876: 36), *Hymenostylium* Bridel (1827: 81), *Hymenostyliella* Bartram (1939: 108), *Reimersia* Chen (1941: 62), and *Tridontium* Hooker (1840: pl. 148). Saito (1975), in his monograph of Japanese Pottiaceae, treated Chen's Eucladioideae as tribe Pleuroveisieae in the subfamily Pottioideae, including within it Leptodontieae, Barbuleae and Pottieae. According to Saito (1975), this tribe is characterized by the hardly differentiated basal laminal cells, plane basal leaf margins, the low gemmae-formation, and eperistome or reduced peristome in the capsule.

***Tuerckheimia guatemalensis* Brotherus (1910: 1)**

In South America, this species was reported from a single locality in Brazil (Yano & Barros 2004). After revision of the specimen kept at SP [Brazil, Mato Grosso, Munic. Alto Taquarí, ca 25 km à Sudeste da Cidade, estrada de acesso à Fazendas, córrego da Laje, 21 February 1996, Pietrobom da Silva et al. 3021 (SP)], it must be referred to *Anoectangium euchloron*. Therefore, *T. guatemalensis* must be excluded from the studied area.

Acknowledgments

This research was carried out with financial support from the Spanish "Ministerio de Ciencia e Innovación" (Project CGL2010-15959/BOS co-financed by FEDER and "Ramón y Cajal" subprogram co-financed by the European Social Fund). We thank the staff of the Botanical Museum of Córdoba (Argentina), University of Brasilia (Brasil), National Herbarium of La Paz (Bolivia), Botany Department, University of Concepción (Chile), National University of Loja (Ecuador), University of San Marcos of Lima (Peru) and National Herbarium of Fundación Instituto Botánico de Venezuela Dr. Tobías Lasser in Caracas (Venezuela) for their assistance during our field trips in South America, and A. Schäfer-Verwimp, P. Sollman and the curators of the herbaria cited in the text for assistance during our visit to the herbaria or the loan of specimens. We also thank D. Peralta, G. Suárez and H.J. Zündorf by diverse information about the localization of specimens and M. Price and for assistance with nomenclature matters. We also appreciate the valuable comments and suggestions of R.H. Zander, and other anonymous reviewer.
