The creation of the *International Fossil Plant Names Index* (IFPNI 2014 onwards, Doweld 2015) with listing of all fossil plant, algal and fungal species reveals the homonymy between fossil-species belonging to genus *Elaeocarpus* Linnaeus (1753: 515). The fossil-species *Elaeocarpus microphyllus* Budantsev & Sveshnikova (1964: 102) was described based on the leaf remains from the Tertiary (Oligocene) sediments near Svetlogorsk, Kaliningrad region, Russian Federation (former East Prussia). However, Elmer (1911) and independently Warburg (1922), proposed the earlier homonyms *Elaeocarpus microphyllus* Elmer (1911: 1189) and *E. microphyllus* Warburg (1922: 328) respectively, which were overlooked. According to Art. 53.1 of the ICN (McNeill *et al.* 2012), a junior fossil homonym, *Elaeocarpus microphyllus* Budants. & Sveshn. is illegitimate and hence a new name is proposed here. A new nomenclatural act was registered through a pilot registration version in the International Fossil Plant Names Index (IFPNI 2014 onwards), with unique persistent registration barcode (LSID) listed under each newly proposed fossil plant taxon.

Systematics

Family *Elaeocarpaceae* Jussieu in Candolle (1816: 87)

Genus *Elaeocarpus* Linnaeus (1753: 515)

Elaeocarpus sveshnikovae Doweld, *nom. nov.*

Replaced synonym: *Elaeocarpus microphyllus* Budantsev & Sveshnikova (1964: 102), *nom. illeg.*, non Elmer (1911: 1189) nec Warburg (1922: 328).

Type:—RUSSIAN FEDERATION: # 317 (holotype, Komarov Botanical Institute, Russian Academy of Sciences, St.-Petersburg, Russian Federation [LE]).

Etymology:—in honor of Irina Nikolaevna Sveshnikova, Russian palaeobotanist and explorer of Tertiary fossil floras.

Stratigraphy:—Oligocene.

Geography:—Svetlogorsk, Kaliningrad region (Russian Federation).

Note:—The IFPNI registration record: “FEE9EDFB-C16F-4455-B556-B1B2B12067E2” (<http://fossilplants.info/names/FEE9EDFB-C16F-4455-B556-B1B2B12067E2>).
