Abstract

A new naucorid species, *Ctenipocoris oscari* Herrera NEW SPECIES, is herein described for Costa Rica. It is the first species to be described in Central America and the sixth American species. Comparative notes are provided to differentiate this species from the others. Type material is deposited at the Zoological Museum of the University of Costa Rica (MZU-CR), San José, Costa Rica. A preliminary key to the American species of the genus is provided.

Key words: Laccocorinae, Nepomorpha, Central America, Costa Rica, Creeping Water Bug

Se describe una nueva especie de naucórido para Costa Rica, *Ctenipocoris oscari* Herrera NUEVA ESPECIE. Es la primera especie del género descrita para Centroamérica y la sexta en el continente americano. Se proveen notas comparativas para diferenciar esta especie de las otras. El material tipo se encuentra depositado en el Museo de Zoología de la Universidad de Costa Rica (MZUCR), San José, Costa Rica. Se provee una clave preliminar para las especies americanas del género.

Palabras clave: Laccocorinae, Nepomorpha, Centroamérica, Costa Rica, chinches acuáticos

Introduction

The genus *Ctenipocoris* Montandon, 1897 currently has eight described species: one in the Democratic Republic of the Congo and Tanzania (Mbogho & Sites 2013); another in Thailand (Sites *et al.* 1997), Malaysia, Indonesia (Java), and Vietnam; one in China (Zettel 2012); and five in South America. Of the South American species, *Ctenipocoris brasiliensis* (De Carlo), 1968a and *C. plaumanni* (De Carlo), 1968b are found in Brazil; *C. spinipes* (Montandon), 1897 in Brazil, Colombia, and Venezuela; *C. schadei* (De Carlo), 1940 in Brazil, Paraguay, and Argentina; and *C. peruvianus* (La Rivers), 1974 in Peru (Polhemus & Polhemus 2008; Andrade 2010). All these species were originally described in the genus *Heleocoris* Stål, 1876. Polhemus (1987) was the first to include an American species in *Ctenipocoris*; other species were later included by López-Ruf (2004) and Polhemus & Polhemus (2008). With the description of this new species the number of American species becomes six, and the range of the genus is extended into the Central American isthmus.

Material and methods

The specimens examined were kept in 70% ethanol after being collected and deposited in the Zoological Museum of the University of Costa Rica (MZUCR). The new species was found during a revision of the material in the Aquatic Entomology Collection at the MZUCR; only one female and one male specimen were found, and the female specimen was in the best condition.

pronotum and hemelytra brownish and a rounded female subgenital plate (the female specimen has not been described yet, but the California Academy of Sciences (CAS), San Francisco, CA possess a female specimen from Santa Teresa, Dept. Huanuco, Peru, that was revised by the author). Finally, *C. plaumanni* is smaller in size and has small rounded scales on its membrane.

Provisional key to the American species of the genus *Ctenipocoris*.

This provisional key is based on the information provided by Montandon (1897), De Carlo (1940, 1968a, 1968b), La Rivers (1974), Andrade (2010), Polhemus (1987), López-Ruf (1987, 2004), Melo & Nieser (2004), Pereira & Melo (2007), Polhemus & Polhemus (2008), and Terneus *et al.* (2012). Illustrations of the HOLOTYPE of *C. schadei* were requested and used. In addition, material deposited at the CAS and MZUCR was examined by the author.

MATERIAL EXAMINED: *C. brasiliensis* ♂, Paraguay, Colonia independ. 1955, J. Foerster (CAS). *C. oscari* ♀, Costa Rica, Heredia, Sarapiquí. 1992. A. Schlagbauer (MZUCR, HOLOTYPE). *C. oscari* ♂, Costa Rica, Limón, Guápiles. 1999. A. Luna (MZUCR, ALLOTYPE). *C. peruvianus* ♀, Peru, Huanuco, Santa Teresa (CAS).

1. Rigid metasternal spine; posterior angles of connexiva acute and slightly produced..... 2
- "Soft" metasternal spine; connexiva smooth not produced. Brazil, Amazonas *C. brasiliensis* De Carlo, 1968a
2. Anterior portion of mesosternum with a small tubercle 3
- Anterior portion of mesosternum without a small tubercle 5
3. Body length ≥ 9.0 mm; hemelytra, scutellum and pronotum with small to medium size punctures on their surface; proportion of maximum width of pronotum on its posterior margin to length of pronotum on its midline, > 2 4
- Body length / width: 8.2 x 4.8 mm; hemelytra, scutellum and pronotum without punctures on their surface; proportion of maximum width of pronotum on its posterior margin to length of pronotum on its midline, 2.0. Brazil, Rio Janeiro, Mato Grosso, Minas Gerais, Amazonas; Ecuador, Pastaza; Venezuela *C. spinipes* Montandon, 1897
4. Proportion of maximum width of pronotum on its posterior margin to length of pronotum on its midline, 2.12; body length / width: 9.0 x 5.5 mm; subgenital plate of female rounded at apex; dorsal coloration of body yellowish brown with scutellum, and eyes black. Peru, Huanuco *C. peruvianus* La Rivers, 1974
- Proportion of maximum width of pronotum on its posterior margin to length of pronotum on its midline, 2.34 (female); 2.54 (male); body length / width of female: 10.59 x 5.94 mm; of male: 9.18 x 5.72 mm; subgenital plate of female with a notch at apex; dorsal coloration black; head, pronotum, embolium and some spots in the connexiva yellowish brown. Costa Rica..... *C. oscari n. sp.* Herrera
5. Membrane with small rounded scales; hemelytra, scutellum and pronotum with small sized punctures; body length / width: 8.5 x 5.0 mm. Brazil, Santa Catarina *C. plaumanni* De Carlo, 1968b
- Membrane without small rounded scales; hemelytra, scutellum and pronotum with medium sized punctures; body length / width of female: 9.45 / 5.38 mm; of male: 8.81 / 5.08 mm; Paraguay, Villa Rica; Argentina, Misiones, Corrientes; Brazil, Paraná *C. schadei* De Carlo, 1940

Acknowledgements

I am indebted to IdeaWild.org and the Research Center for Marine Sciences and Limnology (CIMAR), as well as to Monika Springer, for their support during this study and for the access to the Aquatic Entomology collection at MZUCR; to Norman Penny for the access to the Entomological Collection at the CAS; to Susana Konopko and Arturo Roig of the Museo Argentino de Ciencias Naturales (MACN) for providing the specific pictures of *C. schadei*; to the Spanish Government and its Agencia Española de Cooperación Internacional de Desarrollo, under the funds D/027406/09 for 2010 and D/033858 for 2011 to Universidad de Las Palmas de Gran Canaria and Universidad de Costa Rica for lending photographic equipment; to Julian Schneider for taking and editing the photos and to Paul E. Hanson for reviewing the manuscript. This publication is a contribution to the MZUCR.
