### Abstract

**Riegeriana gen. nov.** is described to accommodate *Physopelta apicalis* Walker, 1873. A lectotype of *Ph. apicalis* is designated. *Iphita fasciata* Stehlík & Jindra, 2008, *syn. nov.*, is recognized as a new junior subjective synonym of *Riegeriana apicalis*. In addition, *Iphita lata* sp. nov. is described from southern India and a check-list of the species of the genus *Iphita* Stål, 1873 is provided. The etymology of *Iphita nigris* Ahmad & Abbas, 1992 and the lectotype designation of *Dindymellus coimbatorensis* Distant, 1919 are discussed. The following new or confirmed country records are provided: *Iphita coimbatorensis* (Distant, 1919) from India (Karnataka, Orissa); *I. dubia* (Breddin, 1901) from Indonesia (Papua); *I. limbata* Stål, 1870 from Cambodia, China (Hainan), India (Arunachal Pradesh), Indonesia (Sumatra, Kalimantan), Malaysia (Pahang: Tioman Island), and Vietnam; *I. lycooides* (Walker, 1873) from the Philippines (Panay Island).

**Key words:** Hemiptera, Heteroptera, Largidae, new genus, new species, new synonym, lectotype designation, taxonomy, key, Cambodia, China, India, Indonesia, Malaysia, New Guinea, Philippines, Vietnam, Australian Region, Oriental Region

### Introduction

Stehlík & Jindra (2008) described a new species of the genus *Iphita* Stål, 1870, *I. fasciata* Stehlík & Jindra, 2008 from India: Maharashtra, having a combination of characters which distinguished it without doubts from all other species of *Iphita*, especially the colouration of corium consisting of a black transverse stripe on red background. However, in connection with the recent revision of the genus *Physopelta* Amyot & Serville, 1843 (Stehlík 2013) the first author examined the syntype series of *Ph. apicalis* Walker, 1873 and discovered that this species is a senior synonym of *I. fasciata*. Further examination of the species led to the conclusion that it should be accommodated in a new genus of its own. It is described in the present paper as ***Riegeriana* gen. nov.**; a lectotype is also designated for *Ph. apicalis* Walker, 1873.

### Material and methods

A slash ( / ) is used to indicate data in different rows of a single label, double slash ( // ) is used to divide different labels; data on the labels are given in verbatim, the following abbreviations are used: hw = handwritten, p = printed; authors' comments are given in square brackets [ ].

The measurements are presented as mean, with minimum and maximum values in parentheses. Non-coated specimens were examined by Hitachi S-3700N environmental electron microscope at the Department of Palaeontology, National Museum in Prague. Habitus photographs were taken using a Canon MP-E 65 mm macro lens attached to a Canon EOS 550D camera and stacked from multiple layers using the Helicon Focus 5.1 Pro software.

The material examined is deposited in the following collections:

BMNH Natural History Museum, London, United Kingdom;

## ***Iphita varians rubra* Stehlík & Jindra, 2008**

*Iphita varians rubra* Stehlík & Jindra, 2008: 618, 624. Holotype: ♀ (brachypterous), Indonesia: Mentawai Islands: Nias: ‘Lawalo, 16.iii.1980, E. Diehl lgt.’ (EHIA).

**Distribution.** Indonesia (Mentawai Islands: Nias) (Stehlík & Jindra 2008).

### **Acknowledgements**

We would like to say thanks to Mick Webb (BMNH) for the loan of the syntypes of *Ph. apicalis*, Denise Wyniger for information on type specimens deposited in the NHMB, Cuiqing Gao (Nanjing Forestry University, Nanjing, China) for information about distribution of *I. limbata* in China, Dávid Rédei (NKUM) for critical comments on the manuscript, and to Jitka Aldhoun (BMNH) for correcting English. This work was supported by the Ministry of Culture of the Czech Republic to the National Museum (DKRVO 2013/12 and 2014/13, National Museum, 00023272).
