Abstract

A new species of pterosaur, *Maaradactylus kellneri* gen. nov., sp. nov. (Archosauria: Pterosauria) from the Romualdo Formation (Aptian/Albian), is herein described. The specimen (MPSC R 2357) was found at Sítio São Gonçalo, Santana do Cariri city (State of Ceará, northeast Brazil) and consists of the skull, atlas and axis, and represents one of the largest skulls of the Anhangueridae from the Araripe Basin described. The autapomorphies of the new pterosaur include the following characters: a premaxillary sagittal crest that is relatively long and high, beginning at the anterior part of the skull (rostrum) and extending to the 22nd pair of alveoli, not covering the nasoantorbital fenestra or the choanae, and also the presence of 35 pairs of alveoli; smooth palatal ridge, which starts on the 5th pair of alveoli and ends on the 13th pair; palate is convex shaped in the anterior region; choanae not extending laterally; small and convex palatal elevation; the 5th, 6th and 7th alveoli smaller than the 4th and 8th; the alveoli decreasing in size from the 9th to the 12th and increasing from the 13th to 18th, and from the 18th to the 35th they are arranged in triplets. Furthermore, the lateral surface of the premaxillary crest shows grooves and tridimensional structures that may have housed blood vessels.

Key words: Pterosauria, Anhangueridae, Araripe Basin, Romualdo Formation, Brazil

Introduction

Pterosaurs are a group of archosaurs well represented in the fossil record of the Araripe Basin (Kellner and Campos 2002). Since the first description of a pterosaur species from this deposit (Price 1971), several specimens have been collected in this region (e.g. Kellner and Tomida 2000; Kellner 2006; Kellner *et al.* 2013). There are currently 27 formally described species, showing a wide diversity of pterosaurs from this deposit (Campos and Kellner 1985; Witton *et al.* 2009; Eck *et al.* 2011); however, the validity and taxonomic assignment of some taxa is controversial (Fastnacht 2001; Veldmeijer 2003; Rodrigues and Kellner 2008; Martill and Unwin 2012). The major systematic problem within this fauna is the lack of consensus regarding which clades the individual taxa belong to. To date these pterosaurs have been attributed to Ornithocheiridae (de Buissonjé 1980), Anhangueridae (Campos and Kellner 1985), Criorynchidae (Fastnacht 2001), Tapejaridae (Kellner 1989b) and Ctenochasmatoidea (Unwin 1995).

The Anhangueridae clade, though not restricted to Brazil, has its most significant findings recorded in Araripe Basin. This group is defined, according to Kellner (2003), as the immediate common ancestor of *Anhanguera* Campos and Kellner, 1985, and *Tropeognathus* Wellnhofer, 1987, and all its descendants. To date, Anhangueridae is comprised of seven genera: *Anhanguera*, *Tropeognathus*, *Coloborhynchus* Owen, 1874, *Liaoningopterus* Wang and Zhou, 2003, *Siroccoptynx* Mader and Kellner, 1999, *Uktenadactylus* Rodrigues and Kellner, 2008 and *Caulkicephalus* Steel, Martill, Unwin and Winch, 2005 (Kellner and Tomida 2000; Veldmeijer 2003; Rodrigues

relationships shows the importance of proper and thorough preparation of individuals prior to their study, and brings new understanding to the Araripe Basin pterosaurs.

Acknowledgments

We thank CNPq (Conselho Nacional de Desenvolvimento Científico e Tecnológico) for financial support (R.A.M.B. # 140555/2013-7; J.M.S. # 401787/2010-9). We are grateful to Msc. Bruno Vila Nova (FFCL/USP) for critically reading the manuscript and Dave Hone and an anonymous reviewer for comments, which improve the paper. We appreciate the detailed revision of the manuscript by Msc. Rafael Andrade and Msc. Flaviana Lima (UFPE). Thanks to Dr. Scott Thomson (MZUSP) for his detailed revision of the English grammar and Maurílio Oliveira (MN/UFRJ) and Matheus Barbosa for the reconstruction and specimen illustration. We are grateful Dr. Plácido Cidade Nuvens (MPSC) for donating the holotype and encourage him to keep paleontology alive in Cariri region. The Willi Hennig Society is thanked for making TNT freely available.
