Abstract

Two new species of *Euscorpius* Thorell, 1876 (subgenus *Euscorpius* s.str.) (Scorpiones: Euscorpiidae) are described based on morphology and the COI DNA barcoding marker: *E. deltshevi* sp. n. from northern Bulgaria and neighbouring Serbia (formerly reported as *E. carpathicus*) and *E. solegladi* sp. n. from southwestern Bulgaria and neighbouring Greece (formerly reported as *E. hadzii*).

Key words: Scorpions, Balkans, DNA barcoding

Introduction

A recent review of Bulgarian scorpions of the genus *Euscorpius* Thorell, 1876 (Fet & Soleglad 2007) outlined issues and problems involved with delineation and understanding of species in these enigmatic arachnids. In the first thorough molecular study of Greek *Euscorpius* taxa, Parmakelis *et al.* (2013a) demonstrated that cryptic speciation among these scorpions appears to be dramatically underestimated. Here, we apply DNA barcoding, or sequencing of the mitochondrial gene coding for cytochrome c oxidase subunit I (COI), to clarify the phylogenetic position and taxonomic identity of two new, but common, species of *Euscorpius* inhabiting Bulgaria, and provide descriptions of each.

Material and Methods

Material Studied. Thanks to the courtesy of Dr. Petar Beron, who loaned the entire *Euscorpius* collection of the National Museum of Natural History, Sofia (NMNHS) to V.F., we studied as many as 190 specimens of *E. deltshevi* sp. n. and 62 specimens of *E. solegladi* sp. n., which allowed us to gain a better understanding of morphological variation as well as broaden our geographic perspective. A detailed list of material with label data is provided below.

Specimens used for DNA barcoding. Of 25 sequences of *Euscorpius* used for our phylogeny, 18 are reported here for the first time (listed below with GenBank accession numbers). *Euscorpius* (*E.*) *tergestinus* (C.L. Koch, 1837), SLOVENIA: under Nanos Mt., Vipava, 45°50'48"N, 13°57'47"E, 15.06.2001 (Univ. of Ljubljana), VF-0777 (AMSCO047-10, KM111249); CROATIA: Majorija, Senj, 44°59'25"N, 14°54'05"E, 550 m, 7.08.2000 (B. Sket), VF-0823 (AMSCO081-10, HM418305). *Euscorpius* (*E.*) *hadzii* Di Caporiacco, 1950, BOSNIA & HERZEGOVINA: Herzegovina, 15 km S Trebinje, 42°42'N, 18°20'E, 3.08.2000 (P. Trontelj), VF-0795 (AMSCO056-10, HM418290); Herzegovina, Čemerno, 43°14'14"N, 18°36'4"E, 8.09.2006 (D. Pavicevic), VF-0796 (AMSCO057-10, HM418291); Republika Srpska, Lukavac, 44°46'13"N, 18°53'31"E, 8.09.2006 (D.

Exchange of Scholars), Washington, DC, USA, which allowed Victor and Galina Fet to travel and live in Bulgaria in January–May 2005. Help, hospitality, and friendship of many Bulgarian colleagues, especially Petar Beron, Gergin Blagoev, Christo Deltshev, Dobrin Dobrev, Ivan Pandourski, Lyubomir Penev, Alexi Popov, Vladimir Sakalian, and Milen Vassilev, made the 1999 and 2005 visits productive and enjoyable. We thank Yuri Marusik and three anonymous reviewers for their kind and detailed comments on this manuscript.
