Abstract

Two Neotropical subgenera of *Coelioxys* Latreille are revised. The monotypic *C.* (*Platycoelioxys*) Mitchell and *C.* (*Rhinocoelioxys*) Mitchell has seven valid species; six of them (*C. agilis* Smith, *C. barbata* Schwarz & Michener, *C. clypearis* Friese, *C. nasidens* Friese, *C. paraguayensis* Schrottky and *C. zapoteca* Cresson) previously described, and one, *C. platygynatha* Rocha-Filho & Packer n. sp. is new from Amazonas State, Brazil. *Coelioxys nasidens*, previously considered a junior synonym of *C. clypeata* Smith, is resurrected. *Coelioxys crassiceps* Friese and *C. excisa* Friese are synonymized under *C. agilis*, and *C. rostrata* Friese is synonymized under *C. paraguayensis*. Nine names (*C. clypeata*, *C. leucochrysea* Cockerell, *C. angustivalva* Holmberg, *C. doelloi* Holmberg, *C. blabera* Holmberg, *C. mesopotamica* Holmberg, *C. bilobata* Friese, *C. bilobata schenki* Friese and *C. bullaticeps* Friese) are synonymized with *C. zapoteca*. In the latter species the shape of the apical margin of the clypeus of the female varies widely and, though intermediates occur among all forms, the DNA barcode sequences for the different forms are very similar. One species formerly considered as *incertae sedis*, *C. clypearis*, and one belonging to the subgenus *C.* (*Cyrtocoelioxys*) Mitchell, *C. barbata*, are both assigned to the subgenus *C.* (*Rhinocoelioxys*). Keys for both sexes of *C.* (*Rhinocoelioxys*), distribution maps, host and floral records, redescriptions of species and the description of a new species are provided. In the subgenus *C.* (*Platycoelioxys*), only one species, *C. alatiformis* Friese, is recognized with two junior synonyms: *C. crassiceps* Friese syn. nov. and *C. spatuliventer* Cockerell.

Acknowledgements

The authors are grateful to David Notton (BMNH), Frank Koch (ZMB), and Jason Weintraub (ANSP) who allowed access to the holotypes; to Arturo Roig-Alsina (MACN) who provided photos of the holotype of *C. doelloi* and the specimen identified by Holmberg as *C. mesopotamica*; to Maximilian Schwarz (Ansfelden) who allowed access to his personal collection in Austria and to Carlos A. Garófalo (CAVS), Eduardo A.B. Almeida (RPSP), Carlos R.F. Brandão and Kelli S. Ramos (MZUSP), Fernando A. Silveira (DZMG), Sophie Cardinal (CNCIAN), Brian V. Brown (LACM), Peter T. Oboyski (EMEC), Terry L. Griswold (BBSL), Michael S. Engel (SEMC), Philip D. Perkins (MCZ), Seán G. Brady and Brian Harris (USNM), Jason Weintraub (ANSP), Frank L. Carle (RUAC) and Eli Wyman and Jerome G. Rozen (AMNH) who loaned the specimens used in this study. We also would like to thank Sophie Cardinal and Teresa Martin for providing the barcoding sequences from three specimens used at this article and the two anonymous reviewers for comments and suggestions that helped to improve this article. The first author thanks "Coordenação de Aperfeiçoamento de Pessoal de Nível Superior" (CAPES-CsF; grant no. 2502-13-5) for providing a scholarship and also the Canadian Foundation for Innovation (CFI) and the Ontario Research Fund (ORF) through Canadensys for providing funds used to purchase all the equipment used to take the images.
