Abstract

A taxonomic revision based on the study of the external morphology and the terminalia of *Phygopoda* Thomson, 1864 and *Pseudophygopoda* Tavakilian & Peñaherrera-Leiva, 2007 is presented. The genera and their species are redescribed. Five synonymies are proposed: *Panamapoda* Clarke, 2014 and *Paraphygopoda* Clarke, 2014 = *Pseudophygopoda* Tavakilian & Peñaherrera-Leiva, 2007; *Paraphygopoda viridimicans* (Fisher, 1952); *Paraphygopoda nappae* Clarke, 2014; and *Paraphygopoda longipennis* (Zajciw, 1963) = *Pseudophygopoda albitarsis* (Klug, 1825). The genus *Phygopoda* is composed of five species: *Phygopoda fugax* Thomson, 1864; *Phygopoda fulvatarsis* Gounelle, 1911; *Phygopoda ingae* Peñaherrera-Leiva & Tavakilian, 2004; *Phygopoda jacobi* Fuchs, 1961; and *Phygopoda nigratarsis* Gounelle, 1911. *Pseudophygopoda* is now composed of three species: *Pseudophygopoda subvestita* (White, 1855), *Pseudophygopoda panamensis* (Giesbert, 1996) **comb. nov.**, and *Pseudophygopoda albitarsis* (Klug, 1825) **comb. nov.** New geographical records are reported for six species. A key to the species of *Phygopoda* and *Pseudophygopoda*, photographs, plates of drawings, and maps of the geographical distribution of the species are provided.

Key words: Rhinotragini, redescrptions, synonymies, new records
