Abstract

Six new species and two new genera of feather mites are described from the hoatzin *Opisthocomus hoazin* (Müller) (Opisthocomiformes: Opisthocomidae) in Brazil: *Gymnalichus lacrimosus* sp. n., *G. latihumeralis* sp. n. (Xolalgidae), *Temnalges hoazin* sp. n., *T. atelodiscus* sp. n. (Psoroptoididae), *Cigalichus boasfilhoi* gen. n., sp. n., and *Hoazinacarus anisasetus* gen. n., sp. n. (Pterolichidae). Illustrations of two previously known species, *Opisthocomacarus umbellifer* (Trouessart, 1899) and *Stakyonemus hystrix* (Trouessart, 1899) are provided. We show that the hoatzin bears a much richer
