Abstract

A widely accessible list of known plant species is a fundamental requirement for plant conservation and has vast applications. An index of published names of liverworts and hornworts between 2009 and 2010 is provided as part of a continued effort in working toward producing a world checklist of this group. Included in the list are also names overlooked by earlier indices. The list includes 30 higher taxa, 250 species, 52 infraspecific taxa, 31 autonyms, and two fossils for 2009 and 2010. A number of taxa not covered by the earlier indices for 2000–2008 are also included.

Key words: Liverworts, hornworts, index, nomenclature

Introduction

Under the auspices of the Early Land Plants Today project, there has been a strong community-driven effort attempting to address the critical need to synthesize the vast nomenclatural, taxonomic and global distributional data for liverworts (*Marchantiophyta*) and hornworts (*Anthocerotophyta*) (von Konrat *et al.* 2010a). These endeavours are critical in providing the foundation to develop a working checklist of liverworts and hornworts worldwide; the first version is projected to be published in 2012. This effort is fundamental toward the development of a working list of all known plant species under the auspices of the *Convention on Biological Diversity* (CBD) and the *Global Strategy for Plant Conservation* (GSPC). The significance of this target was underscored again by the Conference of the Parties to the Convention on Biological Diversity who have further developed the GSPC into its second phase (2011–2020), taking into account current and emerging environmental challenges on plant diversity (Blackmore *et al.* 2011). The critical need for this target to be achieved and the implications for conservation, taxonomy, and botanical science were recently outlined by Paton *et al.* (2008). Progress towards the Targets of the *Global Strategy of Plant Conservation* (GSPC) have recently been reviewed by Paton & Lughadha (2011).

This index follows on from the resourceful indices of recent years: Index of Hepatics (Crosby & Engel 2006), the series Index of Bryophytes 2001–2004 (Crosby & Magill 2005) and Index of Bryophytes 2005 (Crosby & Magill 2006), as well as the most recently published Index of Liverworts and Hornworts 2006–2008 (von Konrat *et al.* 2010b). In the current index we attempt to list citations for names published for liverworts and hornworts during the period January 1, 2009 through December 31, 2010. Valid, illegitimate and invalid names that were overlooked by earlier indices (2000–2008) are also included. A bibliography contains complete citations for the places of publication of the names, their basionyms and blocking names. The format generally follows that of previous indices, especially von Konrat *et al.* (2010b). One significant departure is that full type details of new species and infraspecies are as they appear in the protologue,

including the formatting used. This will aid those researchers who do not always have access to all journals and publications where novel taxa are described. Unlike previous indices basionyms published before 2009 do not have their own entries here. Instead they follow the names of taxa built on them. For fossils we state the geological period. The type taxon is also provided for new higher taxa. All names are arranged alphabetically. As a matter of reference autonyms are included only if created during the period that this index covers, providing a useful resource indicating the publication date on which the autonym was first created. Although names that we judge to be invalidly published under the Vienna Code of Botanical Nomenclature (McNeill *et al.* 2006) are included in the list, nomenclaturally they are not accepted by the authors of this index, and therefore not published under the Vienna Code of Botanical Nomenclature (McNeill *et al.* 2006). As in previous indices, no disposition is provided to an accepted name or to the taxonomy.

The number of names validly published during 2009 and 2010 includes 29 higher taxa, 237 species, 45 infraspecific taxa, and two fossils. In addition, 31 autonyms were also created.

Format

Authorities and citation abbreviations follow the on-line version of Authors of Plant Names at the Royal Botanic Gardens, Kew, Website (www.ipni.org), which is an updated version of Brummitt & Powell (1992). For nomenclatural elements we follow the Vienna Code of Botanical Nomenclature (McNeill *et al.* 2006).

The following outlines the format for the different categories of names published during the period. At the end of each name, referral to the full citation for the journal/book article in which the name appeared is in the form: (Renner *et al.* 2009). Entries may have an annotation in the form of a NOTE near the end. Common reasons for the note are superfluous combinations, blocking names, etc., and era for fossils.

The name of a *new taxon* published during the period takes the form:

Cheilolejeunea fischeri Malombe, *Acta Bot. Hung.* 51: 319, 2009. TYPE: “Kenya, Kakamega Forest; Salazar II fragment, along the path towards Buzambuli A, W. Salazar Circuit, 14 September 2005, Malombe, I. and Chituyi, B. B. 5006/SII2bS1x. Holotype: EA, isotype: EGR” (Malombe 2009).

Its article from the Bibliography:

Malombe I (2009) Studies on African *Cheilolejeunea* (Lejeuneaceae) I: New species and new combinations. *Acta Botanica Hungarica* 51: 315–328.

A *new combination* published during the period takes the form:

Cololejeunea thiersiae (Pócs) Pócs, *Polish Bot. J.* 54: 9, 2009 (Pócs & Bernecker 2009). BASIONYM: *Aphanolejeunea thiersiae* Pócs, *Hikobia* 11: 459, 1994 (Pócs 1994).

Its articles from the Bibliography:

Pócs, T. (1994) New or little known epiphyllous liverworts, V. *Aphanolejeunea* collected by Barbara M. Thiers in Australia and Papua New Guinea. *Hikobia* 11: 457–462.

Pócs T, Bernecker A (2009) Knowledge of *Aphanolejeunea* (Jungermanniopsida) after 25 years. *Polish Botanical Journal* 54: 1–11.

One or two asterisks preceding an entry indicate that the name has been interpreted by us as contrary to McNeill *et al.* (2006) being either illegitimate (a single asterisk) or invalid (two asterisks). We give both the article that we base our interpretation on, and a short statement about what we think is wrong. For example:

* *Chiloscyphus himalayensis* (A.Srivast. et S.C.Srivast.) J.J.Engel, *Fieldiana, Bot. n.s.* 48: 20, 2010, *nom. illeg.* Art. 53.1; hom. illeg. [non Steph. 1907] (Engel 2010). BASIONYM: *Lophocolea himalayensis* A.Srivast. et S.C.Srivast., *Indian Geocalyc.*: 182, 2002 (Srivastava & Srivastava 2002). NOTE: Blocking name is *Chiloscyphus himalayensis* Steph., *Bull. Herb. Boissier ser. 2, 7: 837 (Spec. Hep. 3: 209)*, 1907 (Stephani 1907).

A dagger, †, preceding an entry indicates a name for a fossil. For example,

† *Frullania cretacea* Hentschel, A.R.Schmidt et Heinrichs, *Cryptog. Bryol.* 30: 326, 2009. TYPE: “amber inclusion in sample AMNH B-011 from Myanmar”. NOTE: Upper Albion (mid Cretaceous, 100 my) amber from Burma. (Hentschel *et al.* 2009).

The index

Acrobolbineae Hässel (subord.), *Beih. Nova Hedwigia* 134: 475, 2009 (Hässel & Rubies 2009). BASED ON: Acrobolbaceae E.A.Hodgs. (fam.), *Rec. Domin. Mus.* 4: 117, 1962 (Hodgson 1962).

** ***Acromastigum furcatifolium*** (Steph.) E.A.Br., *Cunninghamia* 10: 241, 2007, *nom. inval.* Art. 33.4; basionym not cited, “*furcatifolia*” (Downing *et al.* 2007). BASIONYM: *Lepidozia furcatifolia* Steph., *J. & Proc. Roy. Soc. New South Wales* 48: 112, 1914 (Stephani & Watts 1914).

Acknowledgements

Data were compiled and edited by Anders Hagborg, Lars Söderström, and Matt von Konrat as part of the “Early Land Plants Today Project”. We thank support provided by GBIF (Award No. 2007/41) and the NSF funded project “Bringing Schuster, Standley and Co. Into the Third Millennium: The Field Museum’s 180K Bryophyte and Lichen Conversion & Digitization Project” (Award # 0749762). Funding from the Biodiversity Synthesis Center of the Encyclopedia of Life (EoL) has also greatly helped ELPT towards its overall goals and ambitions of growing into a community wide effort. We also acknowledge the useful resources TROPICOS and the Recent Literature series of The Bryologist compiled by William R. Buck, Bruce Allen, and Ronald A. Pursell. We have also got help with references from Nadya Konstantinova, Sushil K. Srivastava and Rui-Liang Zhu. Jirí Váňa and Pekka Isoviita gave us many valuable comments on the manuscript. Finally, the authors graciously acknowledge John J. Engel for access to his personal bryological library.
