Abstract

A new species of *Eotetranychus* (Acari, Prostigmata: Tetranychidae), namely *Eotetranychus cumtiliarium* n. sp., is described and illustrated from specimens collected on *Tilia platyphyllos* (Tiliaceae) in northern France. A key to French species of *Eotetranychus* is provided.

Key words: Tetranychidae, *Eotetranychus cumtiliarium* n. sp., *Tilia platyphyllos*, France

Introduction

Among the 40 species of Tetranychidae recorded from France, eight belong to the genus *Eotetranychus* and two have already been found on *Tilia* sp.: *E. pruni* (Oudemans, 1931) and *E. tiliarium* (Hermann, 1804) (Bolland *et al.*, 1998). In samples of *Tilia platyphyllos* leaves originating from nurseries, we found a few individuals of a new *Eotetranychus* among many individuals of *E. tiliarium*. This paper describes this new species of *Eotetranychus*. The setal nomenclature used in the descriptions follows Lindquist's (1985) system.
