Abstract

In a recent paper Johanson, K. A. (Insect Systematics and Evolution Supplement 60: 1-147, 2002) the figures of the holotype of *Helicopsyche peruana* Banks were substituted with those of *Helicopsyche maculisternum* Botosaneanu. *Helicopsyche peruana* is herein redescribed together with the correct figures.

Key words: Trichoptera, Helicopsychidae, *Helicopsyche peruana*, redescription

Introduction

The American species of *Helicopsyche* (Helicopsychidae) are placed in two subgenera: *Feropsyche* Johanson, 1998, and *Cochliopsyche* Müller, 1885, both endemic to the New World. With 73 described species (Johanson 2002, 2003), *Feropsyche* is the largest subgenus, while *Cochliopsyche* presently includes 16 species (Johanson in press). In a recent paper (Johanson 2002), 72 *Feropsyche* species were revised and redescribed. In that paper, the figures of *Helicopsyche maculisternum* Botosaneanu, 1993, were incorrectly also given for *Helicopsyche peruana* Banks, 1920. In this report a redescription of *H. peruana* is presented together with the correct figures.
