### Abstract

The raphignathoid mites in the collection of H. Habeeb are revised and keyed. Five species are redescribed and illustrated on the bases of the types and cotypes. A new combination is proposed: *Cheylostigmaeus powersi* (Habeeb, 1961), **comb. n.** (from *Eustigmaeus*). *Ledermuelleriopsis taylori* Habeeb, 1961, is considered a junior synonym of *Eustigmaeus reticulatellus* (Habeeb, 1961) (= *Ledermuelleria reticulatella* Habeeb, 1961).

**Key words:** Acari, Homocaligidae, Stigmaeidae, Habeebs collection, revision
