Abstract

Three new species of the *Coleophora salicorniae* group (Coleophoridae) are described: *Coleophora parulis* sp. n., *Coleophora varisequens* sp. n., and *Coleophora innermongoliensis* sp. n. All have very large spiniform setae on the first tergum of abdomen. Photographs of adults and genitalia of the new species are provided. A checklist and a distribution map of all known Chinese species of this group are given.

**Key words:** Lepidoptera, Coleophoridae, *Coleophora*, new species, China

Introduction

Additional specimens collected from Inner Mongolia by Dandan Zhang and Zhiqiang Li were examined recently, among which were the three new species belonging to the *Coleophora salicorniae* group that are described below. A distribution map of all the Chinese species of the *Coleophora salicorniae* group is included (Fig. 28).
