Abstract

Chrysopilus Macquart is the most diverse genus of Rhagionidae (Diptera, Brachycera), widespread in distribution, encompassing all biogeographical regions. A taxonomic revision of the Brazilian *Chrysopilus* is made, with the description of 11 new species – *C. balbii* **sp. n.**, *C. caligatus* **sp. n.**, *C. camargoi* **sp. n.**, *C. capillosus* **sp. n.**, *C. hyalinus* **sp. n.**, *C. microphallus* **sp. n.**, *C. orphnopterus* **sp. n.**, *C. phaeopterus* **sp. n.**, *C. plaumanni* **sp. n.**, *C. semipictus* **sp. n.**, and *C. vitreus* **sp. n.** – and the redescription of *C. fascipennis* Bromley.

Key words: *Chrysopilus*, Rhagionidae, Brachycera, Diptera, Neotropics, taxonomy
