### Abstract

The paramunnid genera *Austrosignum* Hodgson, 1910 (type species *A. glaciale* Hodgson, 1910) and *Munnogonium* George & Strömberg, 1968 (type species *M. waldroneense* George & Strömberg, 1968) are re-diagnosed. Twenty seven species are reviewed. *Austrosignum* is restricted to two described species, *Munnogonium* to five described species. The remaining 20 species are placed in the following eight new genera: *Boreosignum* (type species *Austrosignum maltinii* Schiecke & Fresi, 1972), *Cryosignum* (type species *Paramunna lunata* Hale, 1937), *Meridiosignum* (type species *M. macquariensis* sp. nov.), *Tethygonium* (type species *T. quadricuspis* sp. nov.), *Quetzogonium* (type species *Austrosignum*
