Abstract

Five new species of _Myrsidea_ parasitic on members of the avian family Thamnophilidae are described herein. They and their type hosts are _Myrsidea klickai_ ex the Northern Slaty Antshrike, _Thamnophilus punctatus_ (Shaw, 1809), _M. dacostai_ ex the Barred Antshrike, _Thamnophilus doliatus_ (Linnaeus, 1764), _M. spellmani_ ex the Spotted Antbird, _Hylophylax naevioides_ (Lafresnaye, 1847), _M. milleri_ ex the Rufous-throated Antbird, _Gymnophylyx rufigula_ (Boddart, 1783), and _M. mayermae_ ex the White-faced Antbird, _Pithys albifrons_ (Linnaeus, 1766). A portion of the mitochondrial COI gene for some of these and other species of _Myrsidea_ was sequenced to compare genetic divergences.

Key words: chewing lice, sequence, mitochondrial COI

Introduction

At present, _Myrsidea mcleannani_ Sychra, 2006, is the only species of _Myrsidea_ recognized from hosts in the passerine family Thamnophilidae as delimited by Dickinson (2003). Herein we describe and illustrate five new species of _Myrsidea_ from thamnophilid hosts from Panama, Peru, and Venezuela.

In the following descriptions, all measurements are in millimeters. Abbreviations are TW, temple width; HL, head length; PW, prothorax width; MW, metathorax width; AWIV, abdomen width at segment IV; ANW, female anus width; GL, male genitalia length; and TL, total length. Host classification below that of order follows Dickinson (2003). The parenthetical number following each female and male heading is for the number of specimens quantified.

Holotypes for three of the new species, as indicated by "(USNM)", are in the collection of the National Museum of Natural History, Smithsonian Institution, Washington, D.C.; those of the other two new species, as indicated by "(INHS)", are in the collection of the Illinois Natural History Survey, Champaign. Paratypes are distributed between these two collections.

Sequences of a portion of the mitochondrial COI gene were obtained for two of the species described herein. These were compared to sequences of other _Myrsidea_ to evaluate the genetic distinctiveness of these species and their possible phylogenetic relationships.
