Abstract

Six galatheid species are reported for the first time from Chinese waters: Bathymunida brevirostris (Yokoya, 1933), Coralliogalathea humilis (Nobili, 1905), Crosnierita dicata Macpherson, 1998, Enriquea leviantennata (Baba, 1988), Sadayoshia acroporae Baba, 1972 and Sadayoshia edwardsii (Miers, 1884). The four genera, Bathymunida Balss, 1914, Coralliogalathea Baba & Javed, 1974, Enriquea Baba, 2005 and Sadayoshia Baba, 1969, also represent first records for Chinese waters.

Key words: Crustacea, Decapoda, Anomura, Galatheidae, Chinese waters, first records

Introduction

As one of the most diverse families of anomuran decapod crustaceans, galatheids are found over the complete depth range of the oceans and in particular are the numerically dominant organisms collected in many shelf and slope benthic samples (Baba 2005; Baba et al. 2008). With the ongoing taxonomic research on this family, many new genera and new species have been described and some older large genera subdivided into smaller ones during these years (Baba 1969a, 1988, 2005; Baba & de Saint Laurent 1996; Macpherson 1998, 2006; Macpherson & Machordom 2000; Ahyong 2007; Cabezas et al. 2008). Today, the family Galatheidae includes 34 genera worldwide. However, the galatheids of Chinese waters are still poorly known. In the previous studies, a total of 108 galatheid species belong to the following 15 genera have been reported from Chinese waters: Agononida Baba & de Saint Laurent, 1996, Allogalathea Baba, 1969, Cervimunida Benedict, 1902, Crosnierita Macpherson, 1998, Fennerogalathea Baba, 1988, Galacantha A. Milne-Edwards, 1880, Galathea Fabricius, 1793, Heteronida Baba & de Saint Laurent, 1996, Leiogalathea Baba, 1969, Munida Leach, 1820, Munidopsis Whiteaves, 1784, Paramunida Baba, 1988, Phylladiorhynchus Baba, 1969, Raymunida Macpherson & Machordom, 2000, and Shinkaia Baba & Williams, 1998 (Baba 1969a, b, 1978, 1982, 1988, 2005; Miyake & Baba 1964, 1967; Morton & Mladenov 1992; Wang & Li 1986; Wang 1989a, b; Zhong & Wang 1989; Wu et al. 1998; Lin et al. 2004; Osawa et al. 2008; Baba et al. 2008, 2009; Macpherson & Baba 2009).

Recently, we sorted the squat lobster material deposited in the Marine Biological Museum (MBM) in the Institute of Oceanology, Chinese Academy of Sciences, Qingdao (IOCAS), and identified specimens of six species of Galatheidae as new records for Chinese waters: Bathymunida brevirostris (Yokoya, 1933), Coralliogalathea humilis (Nobili, 1905), Crosnierita dicata Macpherson, 1998, Enriquea leviantennata (Baba, 1988), Sadayoshia acroporae Baba, 1972 and Sadayoshia edwardsii (Miers, 1884). Moreover, the four corresponding genera, i.e., Bathymunida Balss, 1914, Coralliogalathea Baba & Javed, 1974, Enriquea Baba, 2005, and Sadayoshia Baba, 1969, are also first records for Chinese waters. The present paper reports these new records. All the specimens were collected by trawling from the coastal waters of mainland China in the East and South China Seas in 1958, 1959, 1978, 1990 and 1994.
