## Abstract

New taxa of the subfamily Cantharinae are described and illustrated: *Taocantharis gen. nov.* (type species: *Islamocantharis businskae* Wittmer, 1997), *Themus (Telephorops) kubani sp. nov.* (N Laos), *T. (Tel.) micheli sp. nov.* (N Laos), *Lycocerus murzini sp. nov.* (China: Sichuan), *L. unguiformis sp. nov.* (China: Sichuan), *L. nigrosericeus sp. nov.* (N Thailand), *L. sipekorum sp. nov.* (India: Arunachal Pradesh), *L. dilatatus sp. nov.* (China: Guizhou), *L. pacholatkoi sp. nov.* (C Laos), *L. costipennis sp. nov.* (S Vietnam), *L. vita sp. nov.* (N Laos), *L. wolfgangi sp. nov.* (China: Sichuan), *L. putzi sp. nov.* (China: Sichuan), *L. rubroniger sp. nov.* (N Laos), *L. marginalis sp. nov.* (China: Yunnan), *L. nakladali sp. nov.* (China: Yunnan), *L. krausi sp. nov.* (N Laos), *L. verticalis sp. nov.* (N Myanmar), *Stenothemus prothemooides sp. nov.* (China: Yunnan), *S. hajeki sp. nov.* (China: Yunnan), *S. dinshuiensis sp. nov.* (China: Sichuan), *S. distortus sp. nov.* (N Laos), *S. kubani sp. nov.* (China: Yunnan), *S. yanmenensis sp. nov.* (China: Yunnan), *S. tamil sp. nov.* (India: Tamil Nadu), *S. honza sp. nov.* (India: Mahārāshtra), *Prothemus kubani sp. nov.* (China: Yunnan) and *P. blankae sp. nov.* (China: Yunnan). *Taiwanocantharis* Wittmer, 1984 stat. nov. is raised to generic rank (from subgenus of *Cantharis* Linnaeus, 1758). New combinations are proposed: *Taiwanocantharis dravuska* (Švihla, 2004) comb. nov. (from *Cordicantharis* Švihla, 1999), *T. chumbiensis* (Champion, 1926) comb. nov., *T. dedicata* (Švihla, 2005) comb. nov., *T. inthanonensis* (Wittmer, 1997) comb. nov., *T. kambaitiensis* (Wittmer, 1989) comb. nov., *T. malaisei* (Wittmer, 1989) comb. nov., *T. metallipennis* (Wittmer, 1997) comb. nov., *T. pallidithorax* (Wittmer, 1984) comb. nov., *T. quinquenotatithorax* (Pic, 1914) comb. nov., *T. seinghokuensis* (Wittmer, 1989) comb. nov., *T. satoi* (Wittmer, 1997) comb. nov., *T. shergaoensis* (Wittmer, 1989) comb. nov., *T. thibetana* (Gorham, 1889) comb. nov., *T. thibetanomima* (Wittmer, 1997) comb. nov., *T. tripunciata* (Wittmer, 1984) comb. nov. (all from *Cantharis*) and *Taocantharis businskae* (Wittmer, 1997) comb. nov. (from *Islamocantharis* Wittmer & Magis, 1987). Key for species similar to *Lycocerus nigrolineatus* Pic, 1914 is provided and new data and/or illustrations are given for *Lycocerus svatopluki* Švihla, 2004, *L. nigrolineatus* Pic, 1914, *Stenothemus jindrai* Švihla, 2004, *S. bourgeoisi* Wittmer, 1974, *S. quadratithorax* (Pic, 1917), *Prothemus opacipennis* (Pic, 1906) and *P. svihlai* Wittmer, 1987.

**Key words:** Taxonomy, Coleoptera, Cantharidae, *Themus*, *Taiwanocantharis*, *Lycocerus*, *Stenothemus*, *Prothemus*, new genus, new species, new combinations, status change, key, new records, Palaearctic region, Oriental region

## Introduction

Since my previous works on the cantharid fauna of south-eastern Asia (Švihla 2004, 2005), I have received additional material including 27 new species, which are described in the current paper. This large amount of new species reveals the extraordinary richness of the local faunas in many areas of south-eastern Asia, making any attempts at comprehensive revisions rapidly obsolete. For this reason, I only differentiate the new species from the already known ones based on previous revisions by Wittmer (1974, 1983, 1987, 1995), Kazantsev (1999), Okushima (2005) and other recent papers on the subject.

## Material and methods

The material is deposited in the following collections:

AKKG = collection of Andreas Kopetz, Kerspleben, Germany;  
APEG = collection of Andreas Pütz, Eisenhüttenstadt, Germany;  
BMNH = Natural History Museum, London, United Kingdom;  
NHMB = Naturhistorisches Museum, Basel, Switzerland;  
NMEG = Naturkundemuseum, Erfurt, Germany;  
NMPC = Národní muzeum, Praha, Czech Republic;  
RCSF = collection of Robert Constantin, Saint Lô, France;  
SMNS = Staatliches Museum für Naturkunde, Stuttgart, Germany.

The names of integument structures follow Harris (1979). They were observed under a 90× magnification. Terminal pubescence is omitted in all aedeagi drawn in dorsal view and the median lobe is not shown in lateral views. Labels of the type material are cited verbatim, separate labels are divided in the text by a slash (/). Names of localities of additional material are written in standard English style.
