

HLAVÁČ, P. (2012) Contribution to the knowledge of the tribe Mastigerina (Coleoptera: Staphylinidae: Pselaphinae, Clavigeritae), with a description of a new genus from Borneo. Zootaxa, 3070, 51–59.

Page 51: The correct title is the following one:

Contribution to the knowledge of the subtribe Mastigerina (Coleoptera: Staphylinidae: Pselaphinae, Clavigeritae), with a description of a new genus from Borneo.

Page 52: The correct key to genera of the subtribe Mastigerina is the following one:

- | | | |
|---|--|----------------------------|
| 1 | Apex of terminal antennomere rounded, with long dense setae | 3 |
| - | Apex of terminal antennomere truncate, with short setae or setae absent | 2 |
| 2 | Base of elytra with well-defined, oblique trichomes, vertexal foveae absent, antennae 4-segmented..... | |
| | <i>Tasmiger</i> Besuchet | |
| - | Base of elytra lacking trichomes, vertexal foveae well-defined, antennae 3-segmented | |
| | <i>Mastiger</i> Motschulsky | |
| 3 | Temples very long, head octagonal, humeri prominent | <i>Longacerus</i> g. nov. |
| - | Temples short, usually covered by facets connecting dorsal and ventral parts of eyes, humeri carinate, not prominent | <i>Pseudacerus</i> Raffray |

Page 56: The correct Figure captions is the following one:

FIGURES 1–9. Habitus (1–3), mesofemora and mesotibia (8–9), and aedeagus (dorsal (4, 6) and lateral (5, 7) aspects) of *Pseudacerus furcatus* (1, 6–7, 9), *P. sabahensis* (2, 4–5, 8) and *Longacerus giraffa* (3). Scale bar (4–9) 1 mm.
