### Abstract

Eleven new species of the genus *Caladomyia* Sæwedal, 1981, from lotic and lentic systems of the state of São Paulo are described and figured: *Caladomyia angelae* sp. n., *Caladomyia carolae* sp. n., *Caladomyia canine* sp. n., *Caladomyia jaragua* sp. n., *Caladomyia yara* sp. n., *Caladomyia capaopreto* sp. n., *Caladomyia curumim* sp. n., *Caladomyia bruneola* sp. n., *Caladomyia comunis* sp. n., *Caladomyia carolensis* sp. n., *Caladomyia kapilei* sp. n. Additionally the male of *C. humboldti* Sæwedal is redescribed and its immatures and the female are described. Keys to males, pupae and larvae of known species of the genus *Caladomyia* are provided.

**Key words:** Diptera, Chironomidae, Tanytarsini, taxonomy, new species, Brazil
