Abstract

The genus *Susuacanga* Martins, 1997 is redescribed. A new combination, *S. blancaneaui* (Bates, 1880) **comb. nov.** and a new synonymy, *Eburia unicolor* Bates, 1870 = *S. octoguttata* (Germar, 1821) are proposed. The genus is now composed of 12 species. The geographical distribution of *S. opaca* is expanded to include Belize. Photographs of *Susuacanga* species are included and a key to differentiate them is provided.

Key words: Eburiini, key, redescription, synonym

Resumo

O gênero *Susuacanga* Martins, 1997 é redescrito. Uma nova combinação *S. blancaneaui* (Bates, 1880) **comb. nov.**, e uma nova sinonímia, *Eburia unicolor* Bates, 1870 = *S. octoguttata* (Germar, 1821), são propostas. Dessa maneira, o gênero fica composto por 12 espécies. A distribuição geográfica de *S. opaca* é ampliada para Belize. Uma chave para as espécies, assim como fotografias, são fornecidas.

Palavras-chave: Eburiini, chave, redscrição, sinônimos

Introduction

The genus *Susuacanga* was described by Martins (1997) for three South American species of *Eburia* Lacordaire, 1830, and characterised by the presence of a tubercle between the upper ocular lobes, by having three transverse gular sulcus and by the dense pronotal punctuation. Martins mentioned the possibility that some other *Eburia* species, from North and Central America, could be also *Susuacanga*. Noguera (2002) revised the *Eburia* species from North and Central America but did not recognize *Susuacanga* as well as other genera described by Martins (1997) as valid. Noguera (2002) mentioned that if the validity of *Susuacanga* was confirmed, some species should be transferred from *Eburia*: *E. falli* Linsley, 1940; *E. hatsueae* Chemsak & Giesbert, 1986; *E. opaca* Chemsak & Linsley, 1973; *E. patruelis* Bates, 1884; *E. poricollis* Chemsak & Linsley, 1973; *E. rotundipennis* Bates, 1884; *E. stigmatica* Chevrolat, 1834; *E. ulkei* Bland, 1862; and *E. wappesi* Noguera, 2002. Recently (Tavakilian, 2013), these species were formally transferred to the genus *Susuacanga*.

In this work, *Susuacanga* is redescribed, a new combination and new synonymy are proposed, and a key to species is provided. All described species are illustrated.

***Susuacanga wappesi* (Noguera, 2002)**

(Fig. 16)

Eburia wappesi Noguera, 2002: 123, fig. 172; Monné, 2005: 154; Hovore, 2006: 371 (distr.).
Susuacanga wappesi; Tavakilian, 2013: 109.

Geographical distribution. Guatemala, Honduras.

Specimens examined. GUATEMALA, Zacapa (12–14 m S Sn Lorenzo), male, 3–6.VI.1989, J.E. Wappes. (Paratipo) (USNM).

Acknowledgments

The author is grateful to the graduate program in Zoology (PPGZoo-MNRJ), to the USNM for the grant to visit the USNM collection, to Eugenio Nearns (USNM) for the picture of the syntype of *Eburia unicolor* and for reviewing the English text, to Helena Marathetis (BMNH) for the picture of the holotype of *Eburia blancaneauai*, to James Wappes (ACMT) for the loan of many specimens, to Joachim Willers (ZMHB) for the picture of the *Cerambyx octoguttata* syntype, and to Marcela L. Monné and Miguel A. Monné (MNRJ) for providing helpful comments on the manuscript.
