Abstract

Caloapenesia Terayama is characterized by having the costal cell very long, the stigma of forewing absent, and the paramere deeply divided into two arms. Three species of this genus were known from Oriental Region. Sixteen new species from Indonesia, Thailand and Vietnam: *C. ana* sp. nov., *C. arbeni* sp. nov., *C. diba* sp. nov., *C. edas* sp. nov., *C. heira* sp. nov., *C. inyara* sp. nov., *C. jailuna* sp. nov., *C. lani* sp. nov., *C. launeci* sp. nov., *C. leptata* sp. nov., *C. mugra* sp. nov., *C. nadaili* sp. nov., *C. paruwa* sp. nov., *C. rikawa* sp. nov., *C. sabeli* sp. nov. and *C. supra* sp. nov. are described and illustrated. A character list for delimiting species and comments about generic male characters as a key to males are given.

Key words: Oriental region, parasitoid wasp, Pristocerinae, systematics
