Abstract

New data are presented for Neotropical Phalangopsidae (Orthoptera, Grylloidea). Four new species are described, *Luzara brevipennis* Desutter-Grandcolas, **n. sp.**, *Miogryllodes hebardi* Desutter-Grandcolas, **n. sp.**, *Aclella brevipennis* Desutter-Grandcolas, **n. sp.** and *Aclella nova* Desutter-Grandcolas, **n. sp.**. Nine new recombinations are proposed: *Lerneca digrediens* (Otte, 2006) **n. comb.** (*Amphiacusta*), *Lernecella erinys* (Otte & Perez-Gelabert, 2009) **n. comb.** (*Uvaroviella*), *Lernecella minor* (Otte, 2006) **n. comb.** (*Paracloides*), *Lernecella mirabilis* (Otte & Perez-Gelabert, 2009) **n. comb.** (*Uvaroviella*), *Lernecella simlense* (Otte & Perez-Gelabert, 2009) **n. comb.** (*Uvaroviella*), *Miogryllodes diaphoros* (Otte, 2006) **n. comb.** (*Amphiacusta*), *Niquirana phyxelis* (Otte, 2006) **n. comb.** (*Luzara*), *Aclella troxalis* (Otte, 2006) **n. comb.** (*Selvacla*), and *Neoacla clandestina* (Nischk and Otte, 2000) **n. comb.** (*Hattersleya*). The synonymy of *Acla* Hebard, 1928 with *Aclodes* Hebard, 1928 is confirmed and discussed, and *Hattersleya* Nischk & Otte, 2000 is newly synonymized with *Neoacla* Desutter, 1988. The diagnosis and/or description of several genera and species are completed.

Key words: Taxonomy, Orthoptera, New Species, New combinations, Synonymy, Neotropics

Résumé

Des données nouvelles sur les Phalangopsidae néotropicaux (Orthoptera, Grylloidea) sont présentées. Quatre nouvelles espèces sont décrites: *Luzara brevipennis* Desutter-Grandcolas, **n. sp.**, *Miogryllodes hebardi* Desutter-Grandcolas, **n. sp.**, *Aclella brevipennis* Desutter-Grandcolas, **n. sp.** et *Aclella nova* Desutter-Grandcolas, **n. sp.**. Neuf recombinations nouvelles sont proposées: *Lerneca digrediens* (Otte, 2006) **n. comb.** (*Amphiacusta*), *Lernecella erinys* (Otte & Perez-Gelabert, 2009) **n. comb.** (*Uvaroviella*), *Lernecella minor* (Otte, 2006) **n. comb.** (*Paracloides*), *Lernecella mirabilis* (Otte & Perez-Gelabert, 2009) **n. comb.** (*Uvaroviella*), *Lernecella simlense* (Otte & Perez-Gelabert, 2009) **n. comb.** (*Uvaroviella*), *Miogryllodes diaphoros* (Otte, 2006) **n. comb.** (*Amphiacusta*), *Niquirana phyxelis* (Otte, 2006) **n. comb.** (*Luzara*), *Aclella troxalis* (Otte, 2006) **n. comb.** (*Selvacla*), et *Neoacla clandestina* (Nischk & Otte, 2000) **n. comb.** (*Hattersleya*). La synonymie d'*Acla* Hebard, 1928 avec *Aclodes* Hebard, 1928 est confirmée et discutée, et *Hattersleya* Nischk & Otte, 2000 est mis en synonymie avec *Neoacla* Desutter, 1988. La diagnose et/ou la description de plusieurs genres et espèces sont complétées.

Mots clés: Taxonomie, Orthoptera, Nouvelles espèces, Nouvelles combinaisons, Synonymie, Région néotropicale

Introduction

While assembling data to reconstruct a wide-scale molecular phylogeny of crickets (Orthoptera, Grylloidea), several new species were sequenced, while several species proved to be currently classified in a wrong genus when studied for their morphology (Chintauan-Marquier *et al.* submit.). The present paper gathers part of these new taxonomic data for neotropical Phalangopsidae.

The following taxa are described here from Costa Rica: *Luzara brevipennis* Desutter-Grandcolas, **n. sp.**, *Miogryllodes hebardi* Desutter-Grandcolas, **n. sp.**, *Aclella brevipennis* Desutter-Grandcolas, **n. sp.** and *Aclella nova* Desutter-Grandcolas, **n. sp.**. Male characters of *Amusodes* Hebard, 1928a and male genitalia of *Niquirana* Hebard, 1928a are also described and illustrated for the first time.

(abdomen, FWs) probably lighter. Face brown with yellow as in *A. troxalis*, but brown spot within the longitudinal yellow band of the face elongate and thin. Palpi brown, their dorsal edge ivory. Tibiae with 4 brown rings. Cerci with a light basal ring. Subgenital plate with a with clear longitudinal median band, wider anteriorly.

Male. FWs very short, highly setose; on the thickened right FW, venation hardly distinct, only the stridulatory file clearly visible in a deep depression; stridulatory file with about 51 teeth ; on the left FW, dorsal field soft and thin with a complete stridulum (harp with 5 or 6 parallel veins, mirror triangular). Subgenital plate longer than wide, slightly emarginate distally (Fig. 7 M).

Male genitalia. Pseudepiphallus sclerite as an acute triangle, with a thin, high and not bifid apex (Fig. 6D). Lateral processes of pseudepiphallus sclerotized ventrally; distinctly narrowed at distal half (Fig. 7L). Ectophallic apodemes short and straight, not reaching the anterior margin of endophallic apodeme (Fig. 6D).

Female. Unknown.

Measurements.

Acknowledgements

Field work in Costa Rica was supported by the program ALAS (OTS, NGS, INBio) and I thank Jack Longino for inviting me in 2005 to collect and study crickets at Finca La Selva and at the Finca Murillo field station. I also thank the staff of the ALAS project, and particularly Flor Cascante Gomez, for their great help in working with ALAS insect collections. Photographs of collection specimens have been taken by Guy Lecorvec (MNHN).
