Abstract

We consider *Pristimantis achuar* as junior synonym of *P. luscombei*, based on morphological and genetic evidence. Paratype specimens of *P. luscombei* are part of a new species, which lead to taxonomic confusion regarding the identity of *P. luscombei*. We describe and name this new species as *Pristimantis miktos* sp. nov. from Juyintza, Pastaza province, eastern lowlands of Ecuador. Morphological diagnostic characters used to distinguish the new species from other brownish Amazonian *Pristimantis* are: (1) skin of dorsum shagreen with scattered tubercles or pustules; (2) tympanum prominent; (3) a thick X-shaped scapular dermal ridge in males; and (4) an orange iris in life. *Pristimantis miktos* is an inhabitant of the lowlands forests of the Pastaza and Napo drainages in eastern Ecuador and northern Loreto in Peru, reaching elevations of up to 350 m; *P. luscombei* is widely distributed in the upper Amazon Basin of Ecuador, northern Peru and extreme western Brazil, up to 1000 m. Phylogenetic analyses reveals that *P. luscombei* and the new species are not closest relatives, as also deduced from morphological evidence.

Key words: Upper Amazon, Anura, barcoding, Brachycephaloidea, *Pristimantis achuar*, *Pristimantis miktos* sp. nov., phylogeny, terraranas

Introduction

Duellman and Mendelson (1995) described several species of amphibians from northern Departamento Loreto, in Amazonian Peru. Among them, *Pristimantis luscombei* was described based on few adult specimens (3 males, one female), which included a series of subadults and juveniles. *Pristimantis luscombei* was considered a medium sized species (26.1 mm in one female; 17.7–21.3 mm in three males) commonly distinguished from other *Pristimantis* in the region by the presence of a W-shaped dermal ridge on the scapular region, a shagreen dorsum with scattered pustules, and cream or tan spot on top of the head or the snout (Duellman & Lehr 2009). Nonetheless, our examination of the type series revealed that it contains specimens of two species, one that roughly correspond to the original description but that lacks the W-shaped dermal ridge, and another one that possess it and that is identical to frogs now considered part of *Pristimantis achuar* (Elmer & Cannatella 2008). Thus, the original description of *P. luscombei* is misleading, as it lists characteristics of two very distinct species. Here, we solve this problem by providing morphological and molecular evidence to support that *P. achuar* is a junior synonym of *P. luscombei*, while two paratypes of *P. luscombei* and newly collected specimens are part of an unnamed species that we describe herein.

APPENDIX II. Optimal maximum likelihood tree (log likelihood= -14743.2), showing the phylogenetic relationships among 224 species of *Pristimantis* and 5 outgroup taxa, scored for 511 aligned sites of the 16S mtDNA gene. Numbers above nodes correspond to non-parametric bootstraps (values < 0.5 not shown, *= 100). Values below nodes are posterior probabilities resulting from Bayesian phylogenetic analyses (topology not shown; values < 0.9 not shown, * = 1). Red dots represent taxa used in the combined analysis of multiple gene fragments (see Figure 3).

APPENDIX III. Specimens examined.

Pristimantis altannis (10 specimens)

Colombia: Putumayo: Santa Rosa de Sucumbíos, rio San Miguel, N0.29, W76.99, 290 m, collected on 2 October 1971, specimens AMNH 103442, 103445. **Ecuador:** Napo: Cando community, upper Napo river, parroquia Talag, S1.09517, W77.92450, 680 m, collected on 3 May 2003 by KRE and T. Sugahara, specimen QCAZ 25311 (**holotype**). Estación Biológica Jatun Sacha, S1.066, W77.617, 396 m, collected on 25 March 2012, specimens QCAZ 53001, 53031, 53032. Pastaza: Montalvo, S2.07, W76.97, 301 m, specimen AMNH 93334. **Peru:** Loreto: Andoas, S2.35111, W75.81622, 173 m, collected on 1 March 2008, specimens CORBIDI 4930; Capahuari norte, S2.66426, W76.50123, 278 m, collected on 1 March 2008, specimen CORBIDI 4828; Jibarito, S2.73565, W76.03178, 218 m, collected on 14 July 2009, specimen CORBIDI 6485.

Pristimantis delius (23 specimens)

Ecuador: Morona Santiago: Cusuimi, Río Cusuime (=Cusime), S2.54, W77.73, 308 m, collected on 29 May 1971, specimens AMNH 93672, Makuma, Centro Amazonas, S2.13, W77.7, 638 m, specimen FHGO 5061; Napo: 9 km vía Tena–Puyo, S1.07, W77.78, 493 m, specimen QCAZ 30068; Estación Biológica Jatun Sacha, S1.066, W77.617, 396 m, collected on 5 April 2012, specimen QCAZ 53034; 53035. Orellana: 72 km vía Hollin–Loreto, S0.71, W77.34, 401 m, specimen FHGO 902; Parque Nacional Yasuní, S0.67, W76.43, 232 m, specimen FHGO 5263; Pastaza: Bufeo, S2.19, W76.79, 294 m, collected on 5 June 2007, specimen DHMECN 4445; 4446, 4452. Pozo Shionayacu, S2.11, W76.58, 298 m, specimen EPN 281; Not locality associated, specimen FHGO 6548; Sucumbíos: Victor Hugo Ruales (=Cantagal), N0.29, W76.3, 293 m, collected on 3 December 2002, specimen FHGO 3516. **Peru:** Amazonas: Rio Cenipa (=Río Cenepa), tributary of Marañón river, S4.65, -78.13, 494 m, specimens AMNH 43265, Loreto: Andoas, S2.70433, W76.31283, 244 m, specimen CORBIDI 2060; Buncuya 1, S6.58871, W74.61145, 153 m, collected on 10 July 2009, specimen GGU 953; Nanay, Lote 123, S3.20457, W74.71207, 154 m, specimen GGU 814; 816, 817, 817a. Rio Corrientes, S3.065, W75.82639, 230 m, collected on 6 October 2008, specimen CORBIDI 4777; San Jacinto, S2.31, W75.87, 181 m, specimen **MHNURP 100 (Holotype)**; Sierra del Divisor, S6.21361, W73.23917, 162 m, collected on 1 November 2008, specimen CORBIDI 2561.

Pristimantis kichwarum (15 specimens)

Ecuador: Morona Santiago: Ashuara village (Tukupi ?) on Rio Macuma, ca 10 km above Rio Morona [ca 83 km ESE Macas], S2.76, W77.51, 220 m, collected on 17 July 1971, specimens AMNH 94641, 94654. Cusuimi, Río Cusuime (=Cusime), S2.54, W77.73, 308 m, collected on 29 May 1971, specimen AMNH 93570; Napo: Estación Biológica Jatun Sacha, S1.066, W77.617, 396 m, specimens DHMECN 1814, 1815, 1817, **QCAZ 18128 (holotype)**, 53018. Pastaza: Pozo Garza 1, S1.81, W76.72, 297 m, collected on 6 July 1989, specimen QCAZ 12704; Sucumbíos: Limoncocha, S0.40688, W76.62063, 252 m, collected on 14 March 2012, specimen QCAZ 52975; 52976, 52977. **Peru:** Loreto: Iquitos, S3.75, W73.25, 94 m, specimens MZUNAP 966, Jibarito, S2.73565, W76.03178, 218 m, collected on 14 July 2009, specimen CORBIDI 6484; Km 31.5, vía Iquitos–Nauta, collected on 10 August 2003, specimen MZUNAP 264.

Pristimantis librarius (5 specimens)

Ecuador: Napo: Estación Biológica Jatun Sacha, S1.066, W77.617, 396 m, collected on 1 April 2012, specimens QCAZ 53028; S side of Rio Napo, 6.5 km ESE of Puerto Misahualli at La Cruz Blanca on Jatun Sacha Biological Reserve, along Secondary Forest Trail 'A', S1.07, W77.6, 404 m, collected on 29 March 1986, specimen AMNH 129476, 129476, 111147, **MCZ 111147 (holotype)**.

Pristimantis luscombei (295 specimens)

Ecuador: Morona Santiago: Ashuara village (Tukupi ?) on Rio Macuma, ca 10 km above Rio Morona [ca 83 km ESE Macas], S2.76, W77.51, 220 m, collected by B. Malkin on 17 July 1971, specimens AMNH 94635–40, 94642–44, 94646–53, 94655; Cusuimi, Río Cusuime (=Cusime), S2.54, W77.73, 308 m, collected by B. Malkin on 29 May 1971, specimen AMNH 93518–19, 93521–25, 93527–29, 93532–40, 93542–55, 93557, 93559, 93561, 93563, 93566, 93568–69, 93571–72, 93574, 93576, 93580, 93582; Kapawi Jungle Lodge, S2.54, W76.82, 258 m, collected by K. Elmer, I. G. Tapia on 23 June 2003, specimen QCAZ 10070, 25454, 25456–**25463 (holotype)**, 25490–92, 25523–30, 25532, 25534, 25538, 25545, 25547, 9661; Tukupi, S2.796451, W77.484009, 234 m, collected by H. M. Ortega-Andrade on 11 May 2012, specimen QCAZ 53248–50, 53252–54, 53257–59, 53268–69, 53272–73, 53282. **Pastaza:** Balsaura, S1.94, W76.3, 200 m, collected on 9 December 2007, specimen DHMECN 4672; 4673, 4680, 4684, 4687; Conambo, S1.87, W76.9, 337 m, collected on 26 January 2008, specimen DHMECN 4740; 4742. Juyuintza, S2.11, W76.19, 192 m, collected by H. M. Ortega-Andrade and F. Timias on 4 July 2012, specimen QCAZ 53581–82, 53561; Montalvo, S2.07, W76.97, 301 m, specimen EPN 247–49, 251, 253–62; Nuevo Corrientes, S2.02, W76.85, 334 m, collected by FVJ on 14 September 2000, specimen QCAZ 29147, 29149, 29709; Pandenuque, S1.44, W77.65, 799 m, collected by J. Valencia on 30 September 2003, specimen FHGO 3712, 3994; Pozo Garza 1, S1.81, W76.72, 297 m, collected by J. M. Touzet on 6 July 1989, specimen QCAZ 12693, 12706; Pozo Misión, S2.22, W76.52, 314 m, specimen EPN 252, 283–84, 286, 291; Pozo Shionayacu, S2.11, W76.58, 298 m, specimen EPN 250; 282, 285; Rio Corrientes, S2.12, W76.05, 185 m, collected by R. Olalla, specimen CORBIDI 2699; Tigitino, Bataburo Lodge, S1.21, W76.72, 240 m, collected on 1 August 1990, specimen DHMECN 1819; Villano, S1.5, W77.47, 393 m, specimen FHGO 573. **Peru:** Amazonas: Condorcanqui, Rio Santiago, Cucuasa Pachis, Cordillera del Cóndor, specimens MUSM 31014–17, 31021, 31024; Cordillera

del Cóndor, specimen MUSM 21253; 21257–58, 21279, 21284, 21291, 21294, 21311; Distrito Río Santiago, Quebrada Kampankis, S4.04308, W77.54119, 1212 m, collected by A. Catenazzi on 12 August 2011, specimen CORBIDI 11393; mouth of Río Cenipa (=Río Cenepa), S4.65, W78.133, 494 m, collected by H. Bassler, specimen AMNH 43104. Loreto: 3 km NE Pebas on Río Amazonas, S3.13, W71.82, 133 m, collected by C. W. Myers & J. W. Daly on 11 April 1977, specimen AMNH 103068; ACTS, specimen MUSM 21602; Andoas, S2.65164, W76.51369, 276 m, collected by A. Delgado on 1 September 2008, specimen CORBIDI 1088; Andoas, S2.70433, W76.31283, 244 m, collected by M. Medina, specimen CORBIDI 1469–72, 1476, 1482–83, 1485–88, 1492, 1565, 1568, 1574; Andoas, S2.73389, W76.02722, 211 m, collected by G. Chavez on 15 November 2007, specimen CORBIDI 428; Andoas, S2.35111, W75.81622, 182 m, collected by V. Duran on 1 March 2008, specimen CORBIDI 4717–18, 4722–23, 4728, 4730, 4733, 4940, 4949, 4951, 4953, 4966, 4970, 4972, 4973–74, 4984, 5038, 5044; Belen-1, S3.70671, W74.53647, 138 m, collected by C. Z. Landauro on 9 December 2011, specimen CORBIDI 10352; Cabecera Ere, S1.679021, W73.719686, 188 m, collected by G. Gagliardi on 16 October 2010, specimen GGU-IIAP 1513; Campamento Shivyacu, S2.50692, W76.08906, 229 m, collected by J.C. Chaparro, specimen CORBIDI 5050; Campuya, Maynas, S1.51798, W73.81625, 154 m, collected by G. Gagliardi on 27 October 2012, specimen GGU-IIAP 1580; 1590; Capahuari norte, S2.66426, W76.50123, 278 m, collected by G. Chavez on 1 March 2008, specimen CORBIDI 4824, 4826, 4829, 4835–36, 4845; Curaray Paiche, Lote 67, S1.49719, W75.39673, 190 m, collected by G.
