Synonymy in the armoured scale insect genus *Unaspis* MacGillivray (Hemiptera: Coccoomorpha: Diaspididae)

GILLIAN W. WATSON

Plant Pest Diagnostic Center, California Department of Agriculture, 3294 Meadowview Road, Sacramento, CA 95832, U.S.A.

E-mail: gillian.watson@cdfa.ca.gov

In recent years, an undescribed species of *Unaspis* MacGillivray (Hemiptera: Coccoomorpha: Diaspididae) has become a damaging pest on the fruit crop *Lansium domesticum* Corrêa (family Meliaceae) in the Philippines.

A communications failure has resulted in this insect being described almost simultaneously by workers in different parts of the world. Lit and Barbecho (2014) described the pest as *U. mabilis* Lit & Barbecho and provided photographs and a graph to help separate the species from *U. citri* (Comstock). Watson (2015) described the pest as *U. lansivora* Watson and provided a detailed taxonomic illustration of the species and an identification key to all the described species of *Unaspis*.

The purpose of this short note is to formally make the name *Unaspis lansivora* Watson, 2015, a junior synonym of *U. mabilis* Lit & Barbecho, 2014.
