Abstract

A classification of the entire Phylum Nematoda is presented, based on current molecular, developmental and morphological evidence. The classification reflects the evolutionary relationships within the phylum, as well as significant areas of uncertainty, particularly related to the early evolution of nematodes. It includes 3 classes, 8 subclasses, 12 superorders, 32 orders, 53 suborders, 101 superfamilies, 276 families, 511 subfamilies, 3030 genera, and 28537 species. All valid species named from the time of publication of the previous classification and census (2010) to the end of 2019 are listed, along with the number of valid species in each genus. Taxonomic authorities are provided for taxon names of all ranks. The habitats where the species in each genus are found are listed, and an alphabetic index of genus names is provided. The systematics of nematodes is reviewed, along with a history of nematode classification; evolutionary affinities and origins of nematodes; and the current diagnosis of the group. Short overviews of the general biology, ecology, scientific and economic importance of the group are presented.

Key words: nematodes, systematics, taxonomy, biodiversity

Introduction

Nematodes are important ecologically and economically (Barker *et al.* 1994, Hodda & Khudhir 2022, Hodda *et al.* 2009, Lamshead 1993, 2004, Yeates *et al.* 2009). They interact in many ways with many different organisms in many food webs, influence physical processes such as decomposition, carbon and nutrient cycling, and are used for biomonitoring or indicating broader ecosystem properties like resilience, evolutionary hotspots, energy or nutrient transfers (Hodda 2021, 2022b). The economic value of nematode parasitism of plants and animals is large (Barker *et al.* 1994, Hodda 2009a, b, Sasser & Freckman 1986, Yeates *et al.* 1993). Furthermore, the economic value can be positive (when it involves control of pests or weeds) or negative (when it decreases crop or livestock production or human health) (Hodda 2009a, b). Identifying nematode species is therefore very important.

One of the reasons for nematodes' large range of interactions with the physical and biological worlds is that nematodes are very diverse: there are a lot of species and they differ substantially from each other so that there are many higher taxonomic groups as well as many species. Exactly how many nematode species there are is not definitively known. The smallest estimate of total number of nematode species is half a million, while the largest is 20 times that—10 million species (Grassle 1989, Grassle & Maciolek 1992, Hodda 2022a, Hodda & Khudhir 2022, Hugot *et al.* 2001, Lamshead 1993, Lamshead & Boucher 2003, May 1988, Stork 1993). The extreme variance in these estimates shows how little is definitively known about nematode species.

We are not even sure of how much we know about nematode species. Estimates of the proportion of nematode species known vary from much less than 1% to around 5%, making them among the least described taxa, and certainly the least described of the mega-diverse animal phyla (Andrassy 1999, 2007, Hodda 2022a). Progress in describing nematode species has been slow, but the rate of descriptions is increasing slowly to the current rate of about 400 species per year (Hodda 2022a). This is less than 0.1% of the estimated total number of species, but 1.5% of the number of known, described species (Hodda 2022a). What it means is that around 13% or an eighth of described species have been described in the last 10 years (Hodda 2022a).

Updates and reconsiderations of nematode classification have not kept up with this rate of new descriptions. A complete history of nematode classifications was presented in 2007, with additions to 2011 published subsequently (Hodda 2007, 2011). The last comprehensive, phylogenetic classification of nematodes was published in 2011 as an update of a classification from 2007 (Hodda 2007, 2011). The 2011 classification included the results of several large-scale sequencing studies of nematodes and did alter the classification somewhat, although many nodes remained unresolved in the molecular phylogenies (Holterman *et al.* 2006, Meldal *et al.* 2007, Nadler *et al.* 2007, Smythe *et al.* 2006, Van Megen *et al.* 2009). (A list compiled for the Catalogue of Life (COL) in 2016 directly involved no nematode specialists and represented a consensus of previous classifications rather than an update including currently understood phylogeny (Ruggiero *et al.* 2015)). Otherwise, despite the substantial numbers of new species described and accumulation of genetic information, there has been no update of nematode classification for the last 10 years.

This paper presents a comprehensive classification of the entire Phylum Nematoda, based on all available evidence (see below). It includes fossil species, and lists all valid genera, with the number of known species in each. Known species numbers are also tallied for all taxonomic ranks. Also provided is an alphabetic list of all genera, the authors of the name, the family, order, and the habitat(s) in which they are found.

Evidence used

The classification is based on morphological, molecular and developmental evidence. Much of this came from previous classifications of all or part of Nematoda (Adamson 1987, Andrassy 1976, 1984, Chitwood 1937, 1950, Chitwood & Chitwood 1933, De Coninck 1965, Drozdovsy 1981, Filipjev 1934, Filipjev & Schuurmans Stekhoven 1941, T. Goodey 1951, J.B. Goodey 1963, Heip *et al.* 1982, Inglis 1983, Lorenzen 1994, Maggenti 1963, 1982, 1991, Malakhov 1986, 1994, Malakhov & Hope 1994, Malakhov *et al.* 1982, Siddiqi 2000). Most of these sources make assumptions about certain characteristics being shared among all representatives of particular taxonomic groups: that is, the classifications are divisive not agglomerative. It may be true that all the members of a group under these classifications all share particular characteristics, but in most cases this is an extrapolation from a subset of the included species. In some cases, data from all known species was not assembled. In other cases data on the particular characteristics was not available for all species and only started being routinely collected as a result of being proposed as a phylogenetically important attribute. In still other cases, characteristics supposedly shared among all of a taxonomic group are known to be absent in some members but assumed primarily present and secondarily lost or modified.

A notable exception to the above is the classification proposed by Lorenzen (1984, 1991). This classification, covering primarily Chromadoria, was quite explicit in exactly what characteristics had been observed in what species, and the extrapolations made in assuming all members of particular groups shared these characteristics. There were quite a few such extrapolations, even though there was an explicit effort to view and record the characteristics of at least one representative of every major taxonomic group.

The present classification is based on similar assumptions and does not claim to have verified that every member of every taxonomic group proposed shares all the diagnostic characteristics of the group, be that group a genus, family, order, class or intermediate taxonomic rank. However, assumptions that particular characteristics are shared by all members of a taxonomic group (genus, subtribe, tribe, subfamily, family, superfamily, suborder, order, superorder, subclass, or class) were checked by using specimens or published information from members of the group (that is, species, genus, subtribe, tribe, subfamily, family, superfamily, suborder, order, superorder, or subclass, respectively) where they were available. The net result is that most of the taxa at most taxonomic ranks were at least sampled to ensure that the members of the taxon do share the same diagnostic characteristics, and that they are the diagnostic characteristics of the taxon.

Molecular phylogenies covering substantial portions of Nematoda also provided substantial evidence for relationships (Aleshin *et al.* 1998, Blaxter *et al.* 2000, De Ley & Blaxter 2002, 2004, Holterman *et al.* 2006, Litvaitis *et al.* 2000, Meldal *et al.* 2007, Nadler *et al.* 2007, Smythe *et al.* 2006, Van Megen *et al.* 2009). However, like morphology (above) and development (below), the availability of molecular characteristics that can be used to infer evolutionary relationships is far from universal among nematode species and larger taxonomic groups. Furthermore, where genomic information was available, it was not always the same part of the genome in all species, and therefore informative for comparing species. Even when comparable information was available, it was not necessarily phylogenetically informative: some nematode species and genera have very similar sequences for the gene regions most frequently sequenced. The net result of all these considerations is that composition and support

for the various taxonomic groups remained dependent on the particular gene region and the nematodes included in an analysis, as well as the methods of alignment and phylogenetic reconstruction used. Although many of the phylogenies produced using molecular data are broadly similar, there are significant differences, and consequently the classifications implied are only broadly similar. More importantly, there are substantial differences in the support for many groups and support for many branches is low, meaning that other phylogenies have a similar likelihood. This means that alternative classifications may be very nearly equally likely to represent the real evolutionary history.

Irrespective of the taxa included or the methods of analysis, a phylogenetic tree for nematodes based purely on molecular criteria may be unresolvable due to closely spaced cladogenesis or availability of data for very few genes across many taxa (Rokas & Carroll 2005, Rokas *et al.* 2005). Differing rates of evolution in the different lineages may further complicate resolution of the phylogeny, due to incorrect interpretation of substitutions (Baurain *et al.* 2007). Of course, rapid diversification makes an order of branching difficult to resolve using evidence of any type—molecular, morphological or fossil (Conway Morris 1993).

See below for how the above characteristics of molecular data and the phylogenies inferred from them were used in the current classification.

Data on development was also used (Aleshin 2004, Baccetti *et al.* 1983, Justine 2002, Malakhov 1994, Schierenberg 2005, Schierenberg & Lahl 2004, Voronov *et al.* 1998, Yushin 2003a,b, Yushin *et al.* 2002, Yushin & Malakhov 2004). Developmental pathways are assumed a very basic attribute of multicellular organisms like nematodes, with a limited number of potentially different ways of producing viable organisms possible. Hence developmental pathways are likely to be conserved among large phylogenetic groups, and have been used frequently in classifications of many different types of organisms, particularly for higher taxa, such as phyla or classes. They have been suggested as providing good evidence for diagnosing classes of nematodes (Voronov *et al.* 1998). However, data on development is painstaking to obtain, and hence available for very few species. The species for which developmental data are available are mostly “model” species which are not representative of any particular taxonomic group; rather they are chosen because of characteristics which make them amenable to study or of particular scientific interest. The value of developmental characteristics for classifying nematodes is therefore limited by the assumptions above.

Data on eggs has been collected for more species of nematodes than has detailed data on developmental pathways (Christenson 1950). Furthermore, data on egg structure has been collected for a wider range of species than developmental pathways (Christenson 1950). However, the proportion of nematode species on which there is data on eggs is still very small, and analyses of its significance for phylogeny and classification are very limited. Therefore, eggs offer limited data for constructing classifications. They are, for example, used for diagnosing, genera and families of Metastrongylidae on the basis of egg shell thickness and sculpturing (Anderson 1978).

Even with all this data, including a lot on morphology, genetics and development from individual species and genera, and a lot more inferred from a consensus on the distribution of characteristics among the nematodes for which data is not available, significant unresolved differences remain in the phylogeny of nematodes. The many areas of nematode phylogeny remaining unresolved has resulted in considerable volatility in the compositions of many higher taxa as well as their ranks. Above the level of the genus nematode classification has been—and continues to be—unstable. In the current classification, the branch points in nematode phylogeny that are ambiguous, unsupported or differ between studies are regarded as polytomies. This continues the convention of many previous classifications (T. Goodey 1951, J.B. Goodey 1963, Hodda 2007, Lorenzen 1981, 1994).

It has been argued that nematode classification will always remain incomplete, but that an incomplete system nevertheless has attractions, provided its incompleteness is recognized (Lorenzen 1994). Incomplete systematic studies provide a closer approximation of the underlying system and a new starting point for further study (Lorenzen 1994).

The present classification, like all others before it, and those that will come after, is acknowledged imperfect and incomplete. However, it is presented here because it fills an important gap in our knowledge of nematode systematics by suggesting a comprehensive classification of the entire phylum using a uniform set of criteria—including marine, freshwater, and terrestrial taxa, along with free-living taxa and parasites of plants, invertebrates and vertebrates. And, as suggested, it provides the basis for studies of trends in nematode systematics and trophic groups (Hodda 2021a, b).

Conventions

Nominotypical subfamilies, tribes and subtribes have been inserted in the classification to facilitate electronic indexing, so that each genus or subgenus is allocated to all taxonomic ranks above, even where not strictly necessary.

Current names follow the Pearse (1936) system of endings for higher taxa, as advocated by several authors (Chitwood 1958, Pearse 1936), and in wide use in nematode taxonomy. Earlier authors, and those from the former USSR, used a different system of endings, and have been cited as authorities if clearly indicating the use of the name at the particular rank, irrespective of the ending applied to the stem name. In many cases the lower-level taxa included in a group now differs substantially from those when the name was proposed.

In previous versions of this classification, the authorities cited for taxa above the genus level were the first to use a name at a particular level, irrespective of the concept represented by the name, and irrespective of uses at other levels. This convention was followed to provide the maximum information. It allowed readers to apply the principle of coordination to these names (International Commission on Zoological Nomenclature 2000), while simultaneously providing information on the use of family-group names to indicate more and less inclusive groups. In nematodes, the concepts and taxa included within families may vary substantially; compare, for example, Andrassy (1976), Lorenzen (1994) and Sudhaus (2011). In many cases those first using the names of higher taxa do not clearly specify all or any of the characteristics of included taxa, and the concepts represented by some family names have changed considerably since they were first proposed. The first user of a name may not have provided sufficient diagnostic characteristics to ascertain how a family-group name should be used. In terms of the species included, many of the original designations of family names include groups no longer considered monophyletic, especially in the light of the recent molecular evidence, and so again the original user of a name may or may not be the one defining the group as currently constituted. For these reasons, the author specifying the diagnostic or apomorphic features, or listing a monophyletic group of species included in a family are often not the original authorities.

The current classification has applied the principle of coordination so that the original authority for a name from the family-group down is determined by priority and the type concept (International Commission on Zoological Nomenclature 2000). Because applying the principle of coordination provides less information than the previous alternative, uses of names at different ranks in the family group are now indicated in parentheses to enable tracing of use of names in the family group.

The names of species described from calendar years 2011 to 2019 (inclusive) are listed explicitly under their genus. The names of species described prior to 2011 are not listed unless subject to some taxonomic act, such as synonymization, reinstatement or assignment to a new combination from 2011 to 2019.

Numbers of species include all those accepted as valid and published before 2020, including fossils and species described from 2011 to 2019 as specified in the preceding paragraph.

The habitat for each genus is listed in the alphabetic compendium below the taxonomic listing. Trophic relationships and groups are discussed and presented in a separate paper (Hodda 2022b).

References are included for citations in the text or footnotes only. Taxonomic authorities for taxa in the classification are listed in the references only for the Family level and above, except for recent species names listed explicitly other than in the taxonomic section. Where there are multiple authors of names, all are listed. Compound names are hyphenated and fully capitalized in the classification and alphabetic list, and accented characters in non-english alphabets are anglicized.

An aim of the classification has been to minimise the changes in taxonomic rank of well-established groups (such as Suborder Tylenchina), in keeping with a general desire to minimise instability in classifications (International Commission on Zoological Nomenclature 2000). In practice, names at high taxonomic ranks like Class or Order are probably used less frequently than those at lower ranks like family or genus. Therefore, additional higher-level names are preferred to a large number of lower-level ranks. For this reason, superorders are defined (following Maggenti 1991) and the use of infraorders is eschewed (Blaxter *et al.* 2000, De Ley & Blaxter 2002, 2004). It may be that further study will result in some of these higher categories being unambiguously placed within others, but considerably more evidence will be required for this to occur given current, often contradictory, evidence.

Classification

Phylum **Nematoda** Cobb, 1932¹ (3 classes, 8 subclasses, 12 superorders, 32 orders, 53 suborders, 101 superfamilies, 275 families, 510 subfamilies, 3030 genera, 284537 species)^{2 3 4}

Class **Enoplea** Inglis, 1983 (3 subclasses, 4 superorders, 9 orders, 12 suborders, 19 superfamilies, 35 families, 63 subfamilies, 243 genera, 2297 species)⁵

Subclass **Enoplia** Pearse, 1942 (2 superorders, 6 orders, 8 suborders, 12 superfamilies, 21 families, 39 subfamilies, 145 genera, 1268 species)

Superorder **Enoplica** Hodda, 2007 (5 orders, 7 suborders, 11 superfamily, 20 families, 38 subfamilies, 143 genera, 1256 species)⁶

Order **Enoplida** Filipjev, 1929 (1 suborder, 3 superfamilies, 6 families, 10 subfamilies, 41 genera, 478 species)⁷

Suborder **Enoploina** Chitwood & Chitwood, 1937 (3 superfamilies, 6 families, 10 subfamilies, 41 genera, 478 species)

Superfamily **Enoploidea** Baird, 1853 (Schuurmans-Stekhoven & De-Coninck, 1933) (3 families, 5 subfamilies, 23 genera, 286 species)

1 Rudolphi (1808) is often cited as the author of the accepted name of the phylum, which is Nematoda. The first holophyletic diagnosis at Phylum rank used the name "Nemates" (Cobb 1932). The latter name has never been in wide use, and the competing claims of the two names have been discussed extensively (Chitwood 1957, 1958, Dougherty 1958a, 1958b). The International Code of Zoological Nomenclature does not insist on citing authorities for taxa above the Family group (ICZN 2000). Following the principle outlined in previous versions of the classification (Hodda 2007, 2011), Cobb (1932) is cited as authority because his use is the first holophyletic use, and also the first specifically as a phylum.

The taxonomic rank of the Nematoda has been very controversial in recent times. Some have ranked the nematodes as a phylum (eg Potts 1932, Pearse 1936, Chitwood 1940, Pearse 1942, Chitwood 1950, Inglis 1983, Maggenti 1991, Goodey 1963), and some as a class (eg Baylis & Daubney 1926, Filipjev 1929, Rauther 1930, Chitwood & Chitwood 1933, De Coninck & Shuurmans Stekhoven 1933, Andrassy 1976, Malakhov *et al.* 1982, Malakhov 1986). Most recently there has been some consensus that nematodes are a sufficiently distinct and well-defined group as to rank as Phylum Nematoda (Blaxter *et al.* 2000, De Ley & Blaxter 2002, 2004, Hodda 2007, 2011). There is much closer agreement on the orders of nematodes.

2 The evolutionary affinities of Nematoda have long been controversial (see discussion in Hodda 2007). The most recent molecular evidence has favoured affinities first with Nematomorpha, then with decreasing relationships to Kinorhyncha, Priapulida and Loricifera within a superphylum Ecdysozoa (Aguinaldo *et al.* 1997, Dunn *et al.* 2008). However, significant unresolved differences between phylogenies hypothesised using different taxa, assumptions, methods and lines of evidence remain.

3 The described species of Nematoda highly underestimates the estimated total number of species by a factor generally estimated at between 10 and 50, but which may be up to 3000, giving an estimated total number of species at between 500 000 and 10 000 000 (Brandt *et al.* 2007, Grassle 1989, Grassle & Maciolek 1992, Hammond 1992, Hodda & Khudhir 2022, Hugot *et al.* 2001, Lambshead 1993, May 1988).

4 Ecologically, the phylum has species occurring in every geographic region on earth, probably has parasitic species in every other animal phylum where the body is significantly larger than the nematodes, has species parasitizing all terrestrial or aquatic and a few marine plants (mostly externally and below ground, but also internally and in stems and seeds), and has free-living species in every habitat on earth where liquid water is ever present (including Antarctica and the Arctic sea ice). Trophically, free-living species consume most other types of small-bodied organisms. Generally, only live organisms are consumed; that is, nematodes are not saprobes.

Broad trophic categories and types of hosts are defined and listed for each genus in a separate publication (Hodda 2022a). The broad types of environments in which each genus is found are provided in the alphabetic list of genera.

5 Enoplea have unique characters of the sperm nuclear envelope being retained in mature spermatozoa (absent in all other nematodes studied), no asymmetry in the dividing germ line (present in other nematodes), and no bilateral symmetry during early embryogenesis (present in other nematodes) (Baccetti *et al.* 1983, Justine 2002, Malakhov 1994, Schierenberg 2005, Voronov *et al.* 1998, Yushin 2003a,b). However, these character states are common in animals outside nematodes, and so they may represent plesiomorphies uninformative for phylogenetic analysis (Aleshin 2004). Oncholaimida have a nuclear envelope present (Yushin *et al.* 2002) as an apomorphy, but have affinities with Enoplia from molecular evidence (Van Megen *et al.* 2009). Spermatogenesis and development also provide evidence for the separation of Enoplea from Dorylaimea and Chromadorea (Yushin & Malakhov 2004, Schierenberg & Lahl 2004).

6 Classification generally follows Lorenzen (1994).

7 Originally created as Order Enopleta.

 Subtribe **Phanodermatinii** Filipjev, 1927 *

 Genus *Phanoderma* Bastian, 1865 (36 species)

 Subgenus *Alyncoides* Wieser, 1953 (5 species)

 Subgenus *Phanoderma* Bastian, 1865 (30 species)

 Species *koreense* Lee & Rho, 2019

 Subgenus *Inglisinema* Platonova, 1984 (1 species)

 Subfamily **Crenopharynginae** Platonova, 1976 (8 genera, 60 species)

 Tribe **Crenopharyngini** Platonova, 1976 *

 Subtribe **Crenopharynginii** Platonova, 1976 *

12 Fossil, cretaceous, Lebanon.

13 Regarded as a superfamily on the basis of molecular evidence (Van Megen *et al.* 2009), as well as morphological differences (Lorenzen 1994) indicating that the clade is on the same level as the Enoploidea.

14 Some molecular analysis suggests a close affinity to Enoplidae (Pegova *et al.* 2004). On this basis, only a single superfamily Enoploidea has been proposed (Smol & Coomans 2006). However, morphological evidence suggests a separate superfamily: the spacious, toothless buccal cavity surrounded by pharyngeal tissue only in the posterior section, the cephalic capsule lacking muscular insertions, and the constant position of the gonads to the left of the intestine are all apomorphic (Lorenzen 1994). Molecular analyses in broader contexts also suggest Enoplidae and Thoracostomopsidae are a separate clade from Anoplostomatidae (Van Megen *et al.* 2009) or the relationships are unresolved (Meldal *et al.* 2007). Hence a separate superfamily is justified.

15 Chaetonematinae originally placed in Enoplidae (Gerlach & Riemann 1974), but subsequently placed in Anoplostomatidae on the basis of a constant position of the gonads on the left of the intestine (Lorenzen 1994) and accepted by Smol & Coomans (2006).

20 Fossil, devonian chert, Scotland.

21 Originally placed in order Alaimida on the basis of superficial morphological similarity, mainly in the buccal cavity and head region, but here regarded as a suborder of Ironida on the basis of molecular evidence, plus morphological similarity of the amphid and reproductive system. Regarded as a suborder because this is a distinct group within Ironida.

22 Placed in Leptosomatidae by most authors (De Coninck 1965, Platonova 1970, 1976, Gerlach & Riemann 1974 and Lorenzen 1994). Gerlach & Riemann (1974) did not regard the subfamily as valid.

23 Deontostomatinae not mentioned in Lorenzen (1994).

24 Genus dubium for Lorenzen (1994).

30 Dubious placement according to Lorenzen (1994).

31 Excluding a nomen nudum (Bussau 1993).

32 Shares a number of morphological characteristics with Rhabdolaimidae (Tchesunov & Gagarin 1999). Other characters are in an unusual combination. Molecular data is lacking. The family may warrant a separate suborder. More investigation is warranted (Smythe 2015).

Suborder **Campydorina** Jairajpuri, 1983 (1 superfamily, 2 families, 3 subfamilies, 7 genera, 8 species)³³
 Superfamily **Campydoroidea** Thorne, 1935 (Jairajpuri Ahmad & Bajaj, 1976) (2 families, 3 subfamilies, 7 genera, 8 species)³⁴
 Family **Campydoridae** Thorne, 1935 (Clark, 1961) (1 subfamily, 2 genera, 2 species)
 Subfamily **Campydorinae** Thorne, 1935 (2 genera, 2 species)

 Genus *Arenasoma* Yeates, 1967 (1 species)

33 Originally affinities were uncertain (Jairajpuri *et al.* 1976), but later proposed under order Dorylaimida (Jairajpuri 1983), but very soon afterwards proposed independently in the order Enoplida (Siddiqi 1983). Hodda (2007) placed Campydorida as an order under Enoplica, on the basis of molecular evidence (Mullin *et al.* 2003). More recent molecular analyses suggest affinities with Ironina (Van Megen *et al.* 2009), so the group is now placed as a suborder within Ironida. Morphological characters can be interpreted in many ways, so do not provide unambiguous evidence for phylogeny.

Molecular evidence suggests affinities between the genera *Campydora*, *Rhabdolaimus* and *Syringolaimus* (Bik *et al.* 2010, Leduc *et al.* 2018, Meldal *et al.* 2007, Shokoohi *et al.* 2013, Smythe 2015, van Megen *et al.* 2009). These genera all have a well-developed basal bulb, and *Syringolaimus* also has a monorchic male reproductive system similar to that in *Campydora* and *Rogerius* (Hoepli & Chu 1932, Tchesunov 2017, Winiszewska 2001), while it is diorchic in other genera of Ironina (Chen & Guo 2015, Shokoohi *et al.* 2013).

34 Following Holovachov (2019).

35 Placed in Leptolaimoidea (Plectida) by De Ley & Blaxter (2004). Some molecular evidence suggests affinities with some Enoplida, Oncholaimida, and Tripylida (Holterman *et al.* 2006). The position of the genus *Syringolaimus* needs clarification, but if included in the Rhabdolaimidae, then the Rhabdolaimidae fits with Enoplica on molecular evidence (Meldal *et al.* 2007). The Rhabdolaimidae can be placed in Enoplida on the morphological characters of non-spiral and pocket shaped amphids (Lorenzen 1994). Curiously, Lorenzen (1994) excluded *Syringolaimus* from Rhabdolaimidae, placing it instead in Ironidae. Maggenti (1963) included the genus in Rhabdolaimidae. Placed as a suborder of Ironida in the current classification on the basis of the similarity of three anteriorly-placed teeth in an elongate buccal cavity, and an unequivocal placement within Ironida on molecular evidence (Van Megen *et al.* 2009).

 Subfamily **Cristamphidelinae** Andrassy, 2002 (1 genus, 8 species)

36 Genus dubium according to Lorenzen (1994).

37 The family Tobrilidae has included the genus *Trischistoma* (Holterman & Holovachov 2007, Zullini 2006), but more recently it was classified as a superfamily within Tripyloidina on the basis of molecular and morphological evidence (Zhao 2011).

38 Alaimidae have been placed in Dorylaimea on the basis of the positions and orifices of the oesophageal glands and the amphidial apertures of some genera, and Enoplea on the basis of other characters. Molecular analyses consistently point to an affinity with Enoplea.

Tribe **Cristamphidelinii** Andrassy, 2002 *

 Subtribe **Cristamphidelinii** Andrassy, 2002 *

 Genus *Cristamphidelus* Siddiqi & Vinciguerra, 1991 (8 species)

Order **Trefusiida** Lorenzen, 1981 (1 suborder, 1 superfamily, 4 families, 4 subfamilies, 13 genera, 65 species)³⁹

 Suborder **Trefusiina** Siddiqi, 1983 (1 superfamily, 4 families, 4 subfamilies, 13 genera, 65 species)

 Superfamily **Trefusioidea** Gerlach, 1966 (Hodda, 2007) (4 families, 4 subfamilies, 13 genera, 65 species)

 Family **Lauratonematidae** Gerlach, 1953 (1 subfamily, 3 genera, 16 species)

 Subfamily **Lauratonematinae** Gerlach, 1953 * (3 genera, 16 species)

 Tribe **Lauratonematini** Gerlach, 1953 *

 Subtribe **Lauratonematini** Gerlach, 1953 *

 Genus *Lauratonema* Gerlach, 1953 (13 species)

 Species *dongshanense* Chen & Guo, 2015

 Species *macrostoma* Chen & Guo, 2015

 Genus *Lauratonemella* Tchesunov, 1984 (1 species)

 Genus *Lauratonemoides* De-Coninck, 1965 (2 species)

 Family **Simpliconematidae** Blome & Schrage, 1985 (1 subfamily, 1 genus, 3 species)

 Subfamily **Simpliconematinae** Blome & Schrage, 1985 * (1 genus, 3 species)

 Tribe **Simpliconematini** Blome & Schrage, 1985 *

 Subtribe **Simpliconematini** Blome & Schrage, 1985 *

 Genus *Simpliconema* Blome & Schrage, 1985 (3 species)

 Family **Trefusiidae** Gerlach, 1966 (1 subfamily, 7 genera, 41 species)

 Subfamily **Trefusiinae** Gerlach, 1966 (7 genera, 41 species)

 Tribe **Trefusiini** Gerlach, 1966 *

 Subtribe **Trefusiinii** Gerlach, 1966 *

 Genus *Africanema* Vincx & Furstenberg, 1988 (3 species)⁴⁰

 Species *multipapillatum* Shi & Xu, 2018

 Genus *Cytolaimium* Cobb, 1920 (2 species)

 Genus *Halanonchus* Cobb, 1920 (9 species)

 Genus *Rhabdocoma* Cobb, 1920 (4 species)

 Genus *Trefusia* De-Man, 1893 (21 species)

 Genus *Trefusialaimus* Riemann, 1974 (1 species)

 Genus *Trichenoplus* Mawson, 1956 (1 species)

 Family **Xenellidae** De-Coninck, 1965 (1 subfamily, 2 genera, 5 species)

 Subfamily **Xenellinae** De-Coninck, 1965 * (2 genera, 5 species)

 Tribe **Xenellini** De-Coninck, 1965 *

 Subtribe **Xenellini** De-Coninck, 1965 *

 Genus *Porocoma* Cobb, 1920 (1 species)

 Genus *Xenella* Cobb, 1920 (4 species)

Superorder **Rhaptothyreica** n. rank (1 order, 1 suborder, 1 superfamily, 1 family, 1 subfamily, 2 genera, 12 species)⁴¹

Order **Rhaptothyreida** Tchesunov, 1997 (1 suborder, 1 superfamily, 1 family, 1 subfamily, 2 genera, 12 species)

Suborder **Rhaptothyreina** Hodda, 2007 (1 superfamily, 1 family, 1 subfamily, 2 genera, 12 species)

Superfamily **Rhaptothyreoiidea** Hope & Murphy, 1969 (Hodda, 2007) (1 family, 1 subfamily, 2 genera, 12 species)

Family **Rhaptothyreidae** Hope & Murphy, 1969 (1 subfamily, 2 genera, 12 species)

Subfamily **Rhaptothyreinae** Hope & Murphy, 1969 * (2 genera, 12 species)

Tribe **Rhaptothyreini** Hope & Murphy, 1969 *

³⁹ A very diverse group, paraphyletic on both molecular and morphological evidence (Holterman *et al.* 2006, Lorenzen 1994, Rusin *et al.* 2001), with part in Enoplea and part in Tripylea. Placed provisionally in Enoplica because this is assumed basal. Revision required.

⁴⁰ Placed in Trefusiidae by Vincx & Furstenberg (1988) on morphological evidence and Shi & Xu (2018) on molecular evidence, but in Tripyloididae by Andrassy (2007) on morphology.

⁴¹ Unplaced in Hodda (2007). Placed as a superorder because affinities within Enoplia are still uncertain, but it falls within a broadened definition of the subclass.

Subtribe **Rhaptothyreinii** Hope & Murphy, 1969 *

- Genus *Agamospirura* Henry & Sisoff, 1913 (10 species)
- Genus *Rhaptothyreius* Hope & Murphy, 1969 (2 species)

Subclass **Oncholaimia** Hodda, 2007 (1 superorder, 1 order, 1 suborder, 1 superfamily, 3 families, 9 subfamilies, 56 genera, 534 species)

Superorder **Oncholaimica** Hodda, 2007 (1 order, 1 suborder, 1 superfamily, 3 families, 9 subfamilies, 56 genera, 534 species)

Order **Oncholaimida** Siddiqi, 1983 (1 suborder, 1 superfamily, 3 families, 9 subfamilies, 56 genera, 534 species)⁴²

Suborder **Oncholaimina** De-Coninck, 1965 (1 superfamily, 3 families, 9 subfamilies, 56 genera, 534 species)

Superfamily **Oncholaimoidea** Filipjev, 1916 (De-Coninck, 1965) (3 families, 9 subfamilies, 56 genera, 534 species)

Family **Oncholaimidae** Filipjev, 1916 (7 subfamilies, 36 genera, 338 species)

Subfamily **Adoncholaiminae** Gerlach & Riemann, 1974 (5 genera, 39 species)

Tribe **Adoncholaimini** Gerlach & Riemann, 1974 *

Subtribe **Adoncholaiminii** Gerlach & Riemann, 1974 *

- Genus *Admirandus* Belogurov & Belagurova, 1979 (3 species)
- Species *multicavus* Mordukhovich, Atopkin, Fadeeva, Yagodina & Zograf, 2015
- Genus *Adoncholaimus* Filipjev, 1918 (27 species)

 Genus *Symplocostoma* Bastian, 1865 (23 species)
 Species *brasiliensis* Nares, Fonseca-Genevois & Esteves, 2013
 Genus *Symplocostomella* Micoletzky & Kreis, 1930 (4 species)
 Genus *Thoonchus* Cobb, 1920 (4 species)
 Family **Thalassogeneridae** Loof & Zullini, 2000 (1 subfamily, 1 genus, 5 species)

46 Subfamily Symplocostomatinae Filipjev 1918 was rejected by Lorenzen (1994) because the otherwise apomorphic features of a pharyngeal bulb, sexual dimorphism in the structure of the buccal cavity, and dorsally spiral amphids are shared between the subfamilies. Likewise Belbolinae Andrassy 1976, Thoonchinae Gerlach & Riemann 1974, Pareurystomininae Andrassy 1976 and Aronematinae Fadeeva & Belogurov 1988 lack diagnostic characters (Lorenzen 1994, Smol & Coomans 2006).

47 Genus dubium in Gerlach & Riemann (1974).

48 Inadequately described, genus dubium and incertae sedis: unplaced by Lorenzen (1994).

Subfamily **Thalassogenerinae** Loof & Zullini, 2000 * (1 genus, 5 species)
 Tribe **Thalassogenerini** Loof & Zullini, 2000 *

 -Rius, 2019

49 Placed in Pelagonematinae Oncholaimidae Oncholaimoidea Oncholaimina Oncholaimida by Andrassy (1973), but transferred to Mononchidae by Jensen (1976) and Lorenzen (1994).

50 Triplonchia was placed as the only subclass in Class Tripylea in previous classifications (Hodda 2007), on the basis of ambiguous morphological evidence, and weak (55–66%) or low molecular support for the dichotomous division of Nematoda into Enoplea and Chromadorea (Holterman *et al.* 2006, Meldal *et al.* 2006, Smythe *et al.* 2006), making a polytomy of Enoplea, Chromadorea, Tripylea, and Dorylaimea the only justified assumption. One species—*Tobrilus diversipapillatus*—has a gastrulation pattern highly common in animal kingdom, but uncommon in nematodes (Schierenberg 2005). Information on the patterns of gastrulation in other Triplonchia, Enoplea and Dorylaimea could potentially provide resolution for the early phylogeny of nematodes. In the absence of morphological or developmental evidence, recent molecular analyses show some affinities between the former Tripylea and the former Enoplea (Van Megen *et al.* 2009), so Tripylea is now placed as a subclass with the sole subclass of the former Enoplea in an enlarged class Enoplea.

51 Cobb (1920) used the name Triplonchia as an order, but this pre-dates the adoption of uniform endings for the names of higher taxa, so is credited as the authority here. Siddiqi (1983) was the first to propose the name at order level in its current form.

52 Originally proposed as subgenus of *Paratrichodorus*, but raised to genus by Siddiqi (1980). Synonym of *Paratrichodorus* by Decraemer & de Waele (1981).

53 Originally proposed as subgenus of *Paratrichodorus*, but raised to genus by Siddiqi (1980). Synonym of *Paratrichodorus* by Decraemer & de Waele (1981).

54 According to Decraemer *et al.* (2019).

Species *quitoensis* Cid-Del-Prado-Vera, Ferris & Nadler, 2016

Species *subintermedia* Zhao, Xi & Xu, 2014

Superfamily **Tobriloidea** De-Coninck, 1965 (4 families, 6 subfamilies, 13 genera, 201 species)

Family **Pandolaimidae** Belogurov, 1980 (1 subfamily, 1 genus, 5 species)

Subfamily **Pandolaiminae** Belogurov, 1980 * (1 genus, 5 species)

Tribe **Pandolaimini** Belogurov, 1980 *

Subtribe **Pandolaiminii** Belogurov, 1980 *

Genus *Pandolaimus* Allgen, 1929 (5 species)

Family **Rhabdodemaniidae** Filipjev, 1934 (1 subfamily, 1 genus, 17 species)

Subfamily **Rhabdodemaniinae** Filipjev, 1934 * (1 genus, 17 species)

Tribe **Rhabdodemaniini** Filipjev, 1934 *

Subtribe **Rhabdodemaniinii** Filipjev, 1934 *

Genus *Rhabdodemania* Baylis & Daubney, 1926 (17 species)

Family **Tobrilidae** De-Coninck, 1965 (3 subfamilies, 10 genera, 178 species)⁵⁹

55 The genus name *Trichodora* has page priority in Cobb 1913 (p434 vs p441), but the name *Trichodorus* is in wide use (by at least 10 different authors in the last 50 years) and *Trichodora* has not been used, so *Trichodorus* is used.

56 Synonymized by Pedram *et al.* (2015) on the basis of morphology and molecular (28S).

57 Division of Tripylina into two clades is supported by molecular evidence (Meldal *et al.* 2006).

58 Genus dubium incertae sedis.

59 The family Tobrilidae should include the genus *Trischistoma* (Holterman & Holovachov 2007, Zullini 2006), but more recently it was classified as a superfamily within Tripyloidina on the basis of molecular and morphological evidence (Zhao 2011).

Subfamily **Asperotobrilinae** De-Coninck, 1965 (Andrassy, 2007) (1 genus, 3 species)

Tribe **Asperotobrilini** De-Coninck, 1965 *

Subtribe **Asperotobrilinii** De-Coninck, 1965 *

Genus *Asperotobrilus* Shoshin, 1991 (3 species)

Subfamily **Neotobrilinae** Tsalolikhin, 2001 (4 genera, 25 species)

Tribe **Neotobrilini** Tsalolikhin, 2001 *

Subtribe **Neotobrilinii** Tsalolikhin, 2001 *

Genus *Macrotobrilus* Tsalolikhin, 1981 (1 species)

Genus *Neotobrilus* Tsalolikhin, 1981 (17 species)

Genus *Quasibrilus* Tsalolikhin, 1976 (3 species)

Genus *Semitobrilus* Tsalolikhin, 1981 (4 species)

Subfamily **Tobrilinae** Filipjev, 1918 (5 genera, 150 species)⁶⁰

Tribe **Tobrilini** Filipjev, 1918 *

Subtribe **Tobrilinii** Filipjev, 1918 *

Genus *Epitobrilus* Tsalolikhin, 1981 (25 species)

Species *interstitialis* Naumova & Gagarin, 2017

Genus *Eutobrilus* Tsalolikhin, 1981 (40 species)

Species *ayaensis* Gagarin & Naumova, 2018

Species *peregrinator* Tsalolikhin, 1983

syn *Epitobrilus medius* G. Schneider, 1916 apud Tsalolikhin, 1980 (Naumova & Gagarin, 2019)

Species *stefanskii* Gagarin & Naumova, 2018

Genus *Kurikania* Tsalolikhin, 1976 (2 species)

Genus *Paratrilobus* Micoletzky, 1922 (7 species)

Genus *Tobrilus* Andrassy, 1959 (76 species)

Species *elginus* Naumova & Gagarin, 2019

Species *juliae* Naumova & Gagarin, 2019

Species *methanus* Gagarin & Naumova, 2016

Species *saprophanus* Naumova & Gagarin, 2017

Family **Triodontolaimidae** De-Coninck, 1965 (Lorenzen, 1978) (1 subfamily, 1 genus, 1 species)⁶¹

Subfamily **Triodontolaiminae** De-Coninck, 1965 (1 genus, 1 species)

Tribe **Triodontolaimini** De-Coninck, 1965 *

Subtribe **Triodontolaiminii** De-Coninck, 1965 *

Genus *Triodontolaimus* De-Man, 1893 (1 species)

Suborder **Prismatolaimina** Hodda, 2010 (2 superfamilies, 4 families, 5 subfamilies, 15 genera, 74 species)⁶²

Superfamily **Prismatolaimoidea** Micoletzky, 1918 (Hodda, 2007) (3 families, 3 subfamilies, 5 genera, 52 species)

Family **Prismatolaimidae** Micoletzky, 1918 (1 subfamily, 2 genera, 38 species)⁶³

Subfamily **Prismatolaiminae** Micoletzky, 1918 * (2 genera, 38 species)

Tribe **Prismatolaimini** Micoletzky, 1918 *

Subtribe **Prismatolaiminii** Gerlach & Riemann, 1974 *

Genus *Prismatolaimus* De-Man, 1880 (37 species)

60 Filipjev (1918) named the subfamily Trilobini, but the genus name *Trilobus* on which it was based is a homonym, so changed to *Tobrilus*.

61 Subfamily created by De Coninck (1965).

62 Placed with Tobriloidea by De Ley & Blaxter (2002). Some molecular analyses place the families Prismatolaimidae and Bastianiiidae in a separate clade (Holterman *et al.* 2006, Van Megen *et al.* 2009), while others did not resolve their relationships (Meldal *et al.* 2006). None of the molecular analyses resolve the relationship of the families with Tobrilidae or Tripylidae. Morphological evidence has been interpreted as suggesting affinities with Bastianiiidae, Onchulidae or Tripylidae or even Monhystridae (Coomans & Raski 1988, De Coninck 1935, Goodey 1963, Hodda *et al.* 2004). Recent analyses have suggested inclusion in Tripylida on the basis of the structure of the buccal cavity and cephalic sensillae (Hodda *et al.* 2004, Hodda 2007, Holovachov *et al.* 2008).

63 Subfamily created by Micoletzky (1922).

Genus *Takakia* Yeates, 1967 (1 species)

Family **Bastianiidae** De-Coninck, 1935 (1 subfamily, 2 genera, 10 species)⁶⁴

- Subfamily **Bastianiinae** De-Coninck, 1935 * (2 genera, 10 species)
- Tribe **Bastianiini** De-Coninck, 1935 *
- Subtribe **Bastianiinii** De-Coninck, 1935 *
- Genus *Bastiania* De-Man, 1876 (9 species)
- Genus *Dintheria* De-Man, 1921 (1 species)

Family **Odontolaimidae** Gerlach & Riemann, 1974 (Lorenzen, 1981) (1 subfamily, 1 genus, 4 species)

- Subfamily **Odontolaiminae** Gerlach & Riemann, 1974 (1 genus, 4 species)
- Tribe **Odontolaimini** Gerlach & Riemann, 1974 *
- Subtribe **Odontolaiminii** Gerlach & Riemann, 1974 *
- Genus *Odontolaimus* Lorenzen, 1981 (4 species)

Superfamily **Onchuloidea** Andrassy, 1964 (Hodda, 2010) (1 family, 2 subfamilies, 10 genera, 22 species)⁶⁵

Family **Onchulidae** Andrassy, 1964 (2 subfamilies, 10 genera, 22 species)⁶⁶

- Subfamily **Onchulinae** Andrassy, 1964 (5 genera, 16 species)
- Tribe **Onchulini** Andrassy, 1964 *
- Subtribe **Onchulinii** Andrassy, 1964 *
- Genus *Cyathonchus* Cobb, 1933 (1 species)
- Genus *Kinonchulus* Riemann, 1972 (1 species)
- Genus *Limonchulus* Andrassy, 1963 (4 species)
- Genus *Onchulus* Cobb, 1920 (9 species)
- Genus *Stenonchulus* Schneider, 1940 (1 species)

Subfamily **Pseudonchulinae** Hodda, Bloemers & Wanless, 2005 (5 genera, 6 species)

- Tribe **Pseudonchulini** Hodda, Bloemers & Wanless, 2005 *
- Subtribe **Pseudonchulinii** Hodda, Bloemers & Wanless, 2005 *
- Genus *Caprionchulus* Swart & Heyns, 1993 (1 species)
- Genus *Cupostomella* Siddiqi, 2013 (1 species)
- Species *nobbsae* Siddiqi, 2013
- Genus *Pseudonchulus* Altherr, 1972 (1 species)
- Genus *Tobriloides* Loof, 1973 (2 species)
- Genus *Tobrilonchulus* Holovachov, Winiszewska, Sturhan, Esquivel & Wu, 2008 (1 species)

64 Bastianiidae was family *incertae sedis* in the classifications of De Ley *et al.* (2006) and Hodda (2007). It has been included in Enoplida: Oxystominidae (Andrassy 1976), Tripylida:Prismatolaimidae (De Coninck 1935), Araeolaimida (Goodey 1963), and Chromadorida:Leptolaimina (Lorenzen 1994, Ryss 1988). The family was not included in some molecular analyses (Meldal *et al.* 2006, Smythe *et al.* 2006), but was resolved as a clade with Prismatolaimidae when it was included (Holterman *et al.* 2006, Van Megen *et al.* 2009). There are morphological similarities with Prismatolaimidae in the structure of the sensilla, amphid, cardia, supplements, spicules, spicular musculature, gubernaculum and organellum ovale (Coomans & Raski 1988, Holovachov 2006, Tchesunov & Sturhan 2002). The molecular and morphological evidence seems enough to place the family despite some evidence of other affinities.

65 There is a unique structure of the oesophagus with gland cells interspersed with muscle, which defines the superfamily. Morphological similarities in the orifices of the oesophageal glands, cephalic sensillae, amphids and cardia support affinities with Prismatolaimidae (Hodda *et al.* 2004, Hodda 2007, Holovachov *et al.* 2008). Other interpretations include the family being totally unrelated to, closely related to, or a subset of, the Prismatolaimidae, and variously as belonging to the orders Trefusiida, Enoplida, Tripylida and Triplonchida (Goodey 1963, Andrassy 1964, De Coninck 1965, Riemann 1972, Andrassy 1976, Maggenti 1982, Siddiqi 1983, Maggenti 1991, Lorenzen 1994, Andrassy 2001a,b, De Ley & Blaxter 2002). Some authors have considered the evidence for higher systematics in this group inconclusive (Coomans & Raski 1988).

66 Hodda (2007) placed Onchulidae with Prismatolaimidae in Prismatolaimoidea, but with the inclusion of Bastianiidae with Prismatolaimidae in Prismatolaimoidea, continued inclusion of Onchulidae is no longer justified, so Onchulidae is placed in a new superfamily but with Prismatolaimoidea in a new suborder Prismatolaimina.

Class **Dorylaimea** Hodda, 2007 (3 subclasses, 3 superorders, 8 orders, 10 suborders, 17 superfamilies, 41 families, 90 subfamilies, 499 genera, 4917 species)⁶⁷

Subclass **Dorylaimia** Inglis, 1983 (1 superorder, 1 order, 2 suborders, 6 superfamilies, 18 families, 52 subfamilies, 269 genera, 3126 species)

Superorder **Dorylaimica** Hodda, 2007 (1 order, 2 suborders, 6 superfamilies, 18 families, 52 subfamilies, 269 genera, 3126 species)⁶⁸

Order **Dorylaimida** Pearse, 1942 (2 suborders, 6 superfamilies, 18 families, 52 subfamilies, 269 genera, 3126 species)⁶⁹

Suborder **Dorylaimina** Chitwood, 1933 (5 superfamilies, 14 families, 46 subfamilies, 254 genera, 2995 species)⁶⁹

Superfamily **Dorylaimoidea** De-Man, 1876 (Thorne, 1934) (4 families, 19 subfamilies, 121 genera, 1488 species)

Family **Dorylaimidae** De-Man, 1876 (4 subfamilies, 35 genera, 520 species)

Subfamily **Arctidorylaiminae** Mulvey & Anderson, 1979 (2 genera, 5 species)

Tribe **Arctidorylaimini** Mulvey & Anderson, 1979 *

Subtribe **Arctidorylaiminii** Mulvey & Anderson, 1979 *

Genus *Arctidorylaimus* Mulvey & Anderson, 1979 (4 species)

Genus *Kittidorylaimus* Andrassy, 1999 (1 species)

Subfamily **Dorylaiminae** De-Man, 1876 (7 genera, 47 species)

Tribe **Dorylaimini** De-Man, 1876 *

Subtribe **Dorylaiminii** De-Man, 1876 *

Genus *Anadorella* Siddiqi, 2005 (1 species)

Genus *Baladorylaimus* Andrassy, 2001 (1 species)

Genus *Dorylaimus* Dujardin, 1845 (28 species)

Species *elegans* Vinciguerra, Eskandari, Clausi, Asghari & Rapazzo, 2016

Genus *Ischiodorylaimus* Andrassy, 1969 (13 species)

Species *paracognatus* Gagarin & Gusakov, 2016

Genus *Kunjudorylaimus* Dhanam & Jairajpuri, 2000 (2 species)

Genus *Namaquanema* Heyns & Swart, 1993 (1 species)

Genus *Salimella* Siddiqi, 2005 (1 species)

Subfamily **Laimydorinae** Andrassy, 1969 (14 genera, 375 species)

Tribe **Laimydorini** Andrassy, 1969 *

Subtribe **Laimydorinii** Andrassy, 1969 *

Genus *Afrodorylaimus* Andrassy, 1964 (7 species)

Genus *Amphidorylaimus* Andrassy, 1960 (3 species)

Genus *Calcaridorylaimus* Andrassy, 1986 (10 species)

67 Regarded as a subset of Enoplia by Lorenzen (1981) on the basis of the presence of primarily non-spiral amphids, the group is unresolved in most molecular phylogenies (Meldal *et al.* 2006, Litvaitis *et al.* 2000, Smythe *et al.* 2006). However, Dorylaimea is clearly a separate branch in the latest molecular analysis (Van Megen *et al.* 2009). This position is compatible with morphological analysis (Lorenzen 1981) if the assumed character polarity is reversed, and non-spiral amphids become plesiomorphic rather than apomorphic. All Orders within Dorylaimea have the morphological apomorphy of oesophageal glands opening behind the nerve ring. The clade has been advanced before on other morphological evidence (Maggenti 1991). Using morphological evidence requiring some assumptions regarding homology, but considering the vertebrate-parasitic Trichocephalida, Dioctophymatida, Muspiceida and Mermithida rather than the free-living members of the groups, Spratt (2011) regarded these groups as having shared characters of onchiostyles with Triplochida within Enoplia, and thus supporting Dorylaimia as a subclass within an expanded Enoplia. He also pointed out the presence of a Demanian system appears limited to Muspiceidae (both species of the genus *Maseria*) and 11 genera of Oncholaimida, suggesting further links between Trichocephalia and Enoplia. The clade of Dorylaimia is also supported by other molecular evidence, although it has been equivocally included within Enoplia (De Ley & Blaxter 2004) or Chromadorea (Holterman *et al.* 2006). Spermatogenesis and development provide further evidence for the separation of Dorylaimea from Enoplia and Chromadorea (Yushin & Malakhov 2004, Schierenberg & Lahl 2004). Herein the relation with Enoplia and Chromadorea is regarded as a polytomy (Aleshin *et al.* 1998, Hodda 2007).

68 Classification generally follows Jairajpuri & Ahmad (1992). See Pena-Santiago (2014) for alternative classification.

69 Created as suborder Dorylaimata by Chitwood (1933), which pre-dates the adoption of uniform endings for higher taxa, hence the authority is Chitwood 1933, although the first to use the name Dorylaimina was Pearse (1936).

Species *castaneae* Nedelchev, Elshishka, Lazarova, Radoslavov, Hristov & Peneva, 2014

Genus *Crocodorylaimus* Andrassy, 1988 (10 species)

- Species *borchuk* Tsalolikhin, 2014

 Species *falcicaudatus* Nguyen, Abolafia, Bonkowski & Pena-Santiago, 2016
 Species *floridensis* Alvarez-Ortega, Subbotin & Pena-Santiago, 2018
 Species *itecrii* Pena-Santiago & Varela-Benavides, 2019
 Species *mesoamericanus* Pena-Santiago & Varela-Benavides, 2019
 Species *menzeli* (Bally & Reydon, 1931) Pena-Santiago & Abolafia, 2016
 syn *Dorylainus menzeli* Bally & Reydon, 1931 (Pena-Santiago & Abolafia, 2016)
 Species *micrurus* (Daday, 1905) Pena-Santiago & Abolafia, 2016
 syn *Dorylainus micrurus* Daday, 1905 (Pena-Santiago & Abolafia, 2016)
 Species *neogranuliferus* Pena-Santiago & Abolafia, 2016
 Species *paolae* Alvarez-Ortega, Subbotin & Pena-Santiago, 2018
 Species *paramamillatus* Nguyen, Abolafia, Bonkowski & Pena-Santiago, 2016

71 Originally described as a species of *Eudorylaimus* and placed in Qudsianematinae by Loof 1975 then separated as a separate monotypic genus and placed in Qudsianematinae on morphological evidence by Andrassy (1998), but Aporcelaimidae on molecular evidence (Elshisika *et al.* 2015)

72 Originally described in Dorylaiminae (Yeates 1967) on the basis of an oral aperture circular in cross section, but also regarded as Qudsianematinae (Vinciguerra 2006), Aporcelaiminae (Jairajpuri & Ahmad 1992), and as a synonym of Aporcelaimellus in the subfamily Aporcelaiminae on the basis of the stylet and lip characteristics (Pena Santiago & Ciobanu 2007). Vinciguerra (2006) recognized 31 valid species.

73 Proposed as a subfamily by Andrassy (2009) and supported by Alvarez Ortega *et al.* (2018).

- Species *paraseychellensis* Nguyen, Abolafia, Bonkowski & Pena-Santiago, 2016
 Species *reyesi* Vinciguerra Orselli & Clausi, 2014

 Genus *Afractinca* Vinciguerra & Clausi, 2000 (5 species)
 Genus *Brasilaimus* Lordello & Zamith, 1957 (7 species)
 Genus *Brittonema* Thorne, 1967 (3 species)
 Genus *Practinocephalus* Andrassy, 1973 (1 species)
 Genus *Parastomachoglossa* Coomans & Loof, 1986 (3 species)

78 Following the revision and synoymies proposed by Alvarez-Ortega & Pena-Santiago (2014). Jairajpuri & Ahmad (1992) recognsed 41 species.

79 Following Pena-Santiago *et al.* (2015).

80 Created as a subfamily by Thorne (1939).

81 Brittonematinae Thorne 1967 has been suggested as an inappropriate subfamily name because the genus *Brittonema* Thorne 1967 has been synonymised with 3 different genera: *Brasilaimus* Lordello & Zamith 1957 by several authors (Andrassy 2009, Vinciguerra *et al.* 2000, Zullini & Vinciguerra 2000), and *Actinca* Andrassy 1964 by several other authors (Coomans & Loof 1986, Jairajpuri & Ahmad 1992). Both synomymies were based on the evaluation that the diagnostic feature of a filiform extension of the male tail in *Brittonema* was an anomaly rather than a sound character. If, on the other hand, the character is phylogenetically informative, the genera *Brittonema* and *Practinocephalus* are synonymous because *P. brzeskii* and *P. bizarrius* have similar tails (Vinciguerra & Clausi 2003). Andrassy (2010) suggested the genera should be diagnosed by *Brittonema* having 3 species (*B. sulcatum*, *B. secundum* and *B. brzeskii*) with head not greatly swollen and less than 40 longitudinal cuticular ridges, while *Practinocephalus* contains a single species with greatly swollen head (*P. bizarrius*) and around 100 cuticular ridges). Therefore Brittonematinae is retained.

⁸² Placed as a subfamily of Qudsianematidae by Andrassy (1991), but separated as a family in Actinolaimoidea by Jairajpuri & Ahmad (1992). Here placed in Actinolaimoidea because extensive sclerotization, thickening and elaboration of the cheilostome is apomorphic to the superfamily.

⁸³ Subfamily created by Thorne (1935). Molecular analysis by He *et al.* (2005).

85 Currently the consensus is that there are species groups within the genus based on diagnostic features of limited systematic value. The species within each species group are mostly agreed because the groups are based in diagnostic features, although as more species are described in this very speciose genus, the distinctions between the groups are blurring. Historically, there have been many subgenera defined on slightly different criteria: 8 were recognized by Cohn & Sher (1972), but these were rejected by Luc & Dalmasso (1975), and 9 were recognized by Roy & Gupta (1974). Many species—over 100—have been described since, and it would be difficult to assign many of the new species to subgenera, so they are not recognized.

Subfamily **Athernematinae** Thorne, 1935 (Ahmad & Jairajpuri, 1978) (2 genera, 2 species)⁹⁶

88 A highly heterogeneous genus, with no current classification entirely satisfactory, and the distinct possibility that some of the many proposed subgenera should be afforded generic status. Subgenera are diagnosed by body size, shape of lip region, oesophagus length, vulval shape and orientation, number of genital branches, spicule shape, number and arrangement of ventromedian supplements and gross shape of the tail. Originally, 9 subgenera were proposed (Jairajpuri & Ahmad 1980), 6 of which were subsequently raised to genus with the remaining 3 synonymized and 6 new genera proposed (Siddiqi 1983). Subsequent authors have followed various combinations or subsets of these two schema, and even proposed additional genera (Ahmad & Naz 2012, Andrassy 2009, Jairajpuri & Ahmad 1992, Jordaan & Heyns 1984). A classification including all proposed groups as subgenera is used here on the basis that there are many similarities shared by all subgenera, but also that each subgenus is diagnosable on other, generally reliable characters such as those listed above.

89 Originally created as a genus by Siddiqi (1983).

102 According to Ahmad *et al.* (2018).

103 Subfamily created by Filipjev (1934).

104 Sub-fossil, Colombian copal.

105 Affinities uncertain according to Poinar (2011). Classified here tentatively on the basis of the apparently short oesophagus, rounded tail, body size, and that a member of the family is known to occur in tree bark.

¹⁰⁷ Type genus is *Yungeius* Thorne 1964. Diagnostic feature is a very thin muscular sheath around the oesophageal bulb (thicker in other subfamilies). The family may be paraphyletic, and consists of genera which do not fall into the other subfamilies. Otherwise with the features of the family.

¹⁰⁸ Original designation of suborder Nygolaimina was in a conference proceedings (but proceedings available and more than 10 copies printed). First published in peer-reviewed journal by Ahmad & Jairajpuri (1980).

 Subclass **Bathyodontia** Hodda, 2007 (1 superorder, 3 orders, 4 suborders, 7 superfamilies, 12 families, 25 subfamilies, 174 genera, 1137 species)
 Superorder **Mononchica** Hodda, 2007 (3 orders, 4 suborders, 7 superfamilies, 12 families, 25 subfamilies, 174 genera, 1137 species)
 Order **Bathyodontida** Siddiqi, 1983 (1 suborder, 2 superfamilies, 3 families, 3 subfamilies, 5 genera, 12 species)¹¹⁰
 Suborder **Bathyodontina** Coomans & Loof, 1970 (2 superfamilies, 3 families, 3 subfamilies, 5 genera, 12 species)
 Superfamily **Cryptonchoidea** Chitwood, 1937 (2 families, 2 subfamilies, 2 genera, 7 species)
 Family **Bathyodontidae** Clark, 1961 (1 subfamily, 1 genus, 3 species)
 Subfamily **Bathyodontinae** Clark, 1961 * (1 genus, 3 species)
 Tribe **Bathyodontini** Clark, 1961 *
 Subtribe **Bathyodontinii** Clark, 1961 *
 Genus *Bathyodontus* Fielding, 1950 (3 species)
 Family **Cryptonchidae** Chitwood, 1937 (1 subfamily, 1 genus, 4 species)
 Subfamily **Cryptonchinae** Chitwood, 1937 * (1 genus, 4 species)
 Tribe **Cryptonchini** Chitwood, 1937 *
 Subtribe **Cryptonchinii** Chitwood, 1937 *
 Genus *Cryptonchus* Cobb, 1913 (4 species)
 Superfamily **Mononchuloidea** De-Coninck, 1965 (Coomans & Loof, 1970) (1 family, 1 subfamily, 3 genera, 5 species)

109 Created as a subfamily by Jairajpuri (1965b).

110 Bathyodontida are equal in rank with Mononchida on the morphological grounds of the structure of the head and oesophagus (Coomans & Loof 1970). Molecular evidence also separates Bathyodontida from Mononchida (Holterman *et al.* 2006, Van Megen *et al.* 2009).

- Family **Mononchulidae** De-Coninck, 1965 (Coomans & Loof, 1970) (1 subfamily, 3 genera, 5 species)¹¹¹
- Subfamily **Mononchulinae** De-Coninck, 1965 (3 genera, 5 species)
 - Tribe **Mononchulini** De-Coninck, 1965 *
 - Subtribe **Mononchulini** De-Coninck, 1965 *
 - Genus *Mononchulus* Cobb, 1918 (2 species)
 - Genus *Oionchus* Cobb, 1913 (2 species)
 - Genus *Rahmium* Andrassy, 1973 (1 species)
- Order **Mononchida** Jairajpuri, 1969 (1 suborder, 2 superfamilies, 5 families, 9 subfamilies, 47 genera, 432 species)
- Suborder **Mononchina** Kirjanova & Krall, 1969 (2 superfamilies, 5 families, 9 subfamilies, 47 genera, 432 species)
 - Superfamily **Anatonchoidea** Jairajpuri, 1969 (Jairajpuri, 1971) (2 families, 4 subfamilies, 21 genera, 174 species)
 - Family **Anatonchidae** Jairajpuri, 1969 (2 subfamilies, 10 genera, 47 species)
 - Subfamily **Anatonchinae** Jairajpuri, 1969 (4 genera, 24 species)
 - Tribe **Anatonchini** Jairajpuri, 1969 *
 - Subtribe **Anatonchinii** Jairajpuri, 1969 *
 - Genus *Anatonchus* Cobb, 1916 (13 species)
 - Species *siddiqii* Susulovsky & Winiszewska, 2017
 - Genus *Micatonchus* Jairajpuri, Tahseen & Choi, 2001 (3 species)
 - Genus *Tigronchoides* Ivanova & Dzuraeva, 1971 (9 species)
 - Species *andrassyi* Winiszewska, Susulovsky & Kornobis, 2013
 - Genus *Truxonchus* Siddiqi, 1984 (8 species)
 - Subfamily **Miconchinae** Andrassy, 1976 (6 genera, 23 species)
 - Tribe **Miconchini** Andrassy, 1976 *
 - Subtribe **Miconchinii** Andrassy, 1976 *
 - Genus *Crassibucca* Mulvey & Jensen, 1967 (4 species)
 - Genus *Crassonchus* Siddiqi, 2015 (12 species)
 - Species *dissimilis* Siddiqi, 2015
 - Species *basalis* Siddiqi, 2015
 - Species *colombicus* Siddiqi, 2015
 - Species *pengius* Siddiqi, 2015
 - Species *fijicus* Siddiqi, 2015
 - Species *porosus* Siddiqi, 2015
 - Genus *Doronchus* Andrassy, 1993 (2 species)
 - Genus *Miconchus* Andrassy, 1958 (1 species)
 - syn *Comiconchus* Jairajpuri & Khan, 1982 (Siddiqi, Handoo & Chitwood, 2015)
 - Species *zduni* (Susulovsky, 2019) n. comb.
 - syn *Comiconchus zduni* Susulovsky, 2019
 - Genus *Paracrassibucca* Baqri & Jairajpuri, 1974 (1 species)
 - Genus *Promiconchus* Jairajpuri & Khan, 1982 (3 species)
- Family **Iotonchidae** Jairajpuri, 1969 (2 subfamilies, 11 genera, 127 species)
- Subfamily **Iotonchinae** Jairajpuri, 1969 (6 genera, 109 species)
 - Tribe **Iotonchini** Jairajpuri, 1969 *
 - Subtribe **Iotonchinii** Jairajpuri, 1969 *
 - Genus *Caputonchus* Siddiqi, 1984 (1 species)
 - Genus *Iotonchus* Cobb, 1916 (89 species)
 - Genus *Iotonchulus* Andrassy, 1993 (4 species)
 - Genus *Jensenonchus* Jairajpuri & Khan, 1982 (6 species)
 - Genus *Mulveyellus* Siddiqi, 1984 (5 species)
 - Genus *Nullonchus* Siddiqi, 1984 (4 species)
 - Subfamily **Hadronchinae** Khan & Jairajpuri, 1980 (5 genera, 18 species)
 - Tribe **Hadronchini** Khan & Jairajpuri, 1980 *

111 Subfamily created by De Coninck (1965).

- Subtribe **Hadronchinii** Khan & Jairajpuri, 1980 *
- Genus *Hadronchoides* Jairajpuri & Rahman, 1984 (2 species)
 - Genus *Hadronchulus* Ray & Das, 1983 (3 species)
 - Genus *Hadronchus* Mulvey & Jensen, 1967 (2 species)
 - Genus *Parahadronchus* Mulvey, 1978 (10 species)
 - Genus *Prionchulellus* Mulvey & Jensen, 1967 (1 species)
- Superfamily **Mononchoidea** Filipjev, 1934 (Clark, 1961) (3 families, 5 subfamilies, 26 genera, 258 species)
- Family **Mononchidae** Filipjev, 1934 (Chitwood, 1937) (2 subfamilies, 9 genera, 116 species)
- Subfamily **Mononchinae** Filipjev, 1934 (5 genera, 42 species)
 - Tribe **Mononchini** Filipjev, 1934 *
 - Subtribe **Mononchinii** Filipjev, 1934 *
 - Genus *Mononchus* Bastian, 1865 (33 species)
 - Species *amplus* Gagarin & Naumaova, 2017
 - Species *caudatus* Shah & Hussain, 2016
 - Species *caudatus* Gagarin & Naumaova, 2017 (junior homonym unresolved at time of press)
 - Species *labiatus* Shah & Hussain, 2016
 - Species *prodentatus* Shah & Hussain, 2016
 - Genus *Montonchus* Siddiqi, Handoo & Chitwood, 2015 (1 species)
 - Species *montanus* (Thorne, 1924) Siddiqi, Handoo & Chitwood, 2015
 - syn *Mononchus montanus* Thorne, 1924

- Tribe **Cobbonchini** Jairajpuri, 1969 *
- Subtribe **Cobbonchinii** Jairajpuri, 1969 *
- Genus *Cobbonchulus* Andrassy, 2009 (1 species)
- Genus *Cobbonchus* Andrassy, 1958 (32 species)
- Genus *Tricaenonchus* Andrassy, 1996 (1 species)
- Order **Mermithida** Hyman, 1951 (2 suborders, 3 superfamilies, 4 families, 13 subfamilies, 122 genera, 693 species)
- Suborder **Mermithina** Andrassy, 1971 (1 superfamily, 2 families, 11 subfamilies, 118 genera, 654 species)
- Superfamily **Mermithoidea** Braun, 1883 (Wulker, 1927) (2 families, 11 subfamilies, 118 genera, 654 species)
- Family **Mermithidae** Braun, 1883 (10 subfamilies, 103 genera, 631 species)¹¹²
- Subfamily **Amphidomermithinae** Rubtsov, 1978 (2 genera, 2 species)
- Tribe **Amphidomermithini** Rubtsov, 1978 *
- Subtribe **Amphidomermithinii** Rubtsov, 1978 *
- Genus *Amphidomermis* Filipjev, 1934 (1 species)
- Genus *Schmassmannimermis* Rubtsov, 1978 (1 species)
- Subfamily **Amphimermuthinae** Rubtsov, 1978 (3 genera, 30 species)
- Tribe **Amphimermuthini** Rubtsov, 1978 *
- Subtribe **Amphimermuthinii** Rubtsov, 1978 *
- Genus *Amphimermis* Kaburaki & Imamura, 1932 (23 species)
- Genus *Arachnomermis* Rubtsov, 1978 (4 species)
- Genus *Linstowimermis* Rubtsov, 1978 (3 species)
- Subfamily **Eumermuthinae** Rubtsov, 1978 (3 genera, 9 species)
- Tribe **Eumermuthini** Rubtsov, 1978 *
- Subtribe **Eumermuthinii** Rubtsov, 1978 *
- Genus *Bathymermis* Daday, 1911 (5 species)
- Genus *Eumermis* Daday, 1911 (2 species)
- Genus *Lugamermis* Rubtsov, 1978 (2 species)
- Subfamily **Euryermuthinae** Rubtsov, 1978 (2 genera, 9 species)
- Tribe **Euryermuthini** Rubtsov, 1978 *
- Subtribe **Euryermuthinii** Rubtsov, 1978 *
- Genus *Ceratomermis* Rubtsov, 1978 (1 species)
- Genus *Euryermis* Mueller, 1931 (8 species)
- Subfamily **Hexamermuthinae** Rubtsov, 1978 (2 genera, 37 species)
- Tribe **Hexamermuthini** Rubtsov, 1978 *
- Subtribe **Hexamermuthinii** Rubtsov, 1978 *
- Genus *Decamermis* Rubtsov, 1978 (1 species)
- Genus *Hexamermis* Steiner, 1924 (36 species)
- Species *bonarerensis* Robredo & Camino, 2019

¹¹² The number of species in this family will vary enormously depending on the concepts of species, and standard of description required (Curran & Hominick 1981). The figure cited here is a maximum (Rubtsov 1978). The actual number of species described may be only one third this estimate, omitting many synonyms or descriptions that are inadequate to ever re-diagnose the species.

Species *popiliae* Mazza Paoli Strangi Torrini Marianelli Peverieri Binazzi Bosio
Sacchi Benvenuti Venanzio Giacometto Roversi & Poinar, 2017

Subfamily **Mermithinae** Braun, 1883 (86 genera, 476 species)

Genus *Aulolaimus* De-Man, 1880 (26 species)

Species *agricola* Abolafia & Pena-Santiago, 2018a

Species *cribatus* Abolafia & Pena-Santiago, 2018a

Species *distortus* Abolafia & Pena-Santiago, 2018a

Species *forestalis* Abolafia & Pena-Santiago, 2018a

Species *labiostellatus* Abolafia & Pena-Santiago, 2018a

Species *mubarakvilli* Salma, Nasira, Saima & Shahina, 2017

Species *quercophilus* Abolafia & Pena-Santiago, 2018a

Genus *Mehdilaimus* Prabha, 1974 (1 species)

Genus *Pseudoaulolaimus* Imamura, 1931 (1 species)

Superfamily **Isolaimioidea** Timm, 1969 (1 family, 1 subfamily, 1 genus, 11 species)¹¹⁸

Family **Isolaimiidae** Timm, 1969 (1 subfamily, 1 genus, 11 species)

Subfamily **Isolaimiinae** Timm, 1969 * (1 genus, 11 species)

Tribe **Isolaimiini** Timm, 1969 *

Subtribe **Isolaimiinii** Timm, 1969 *

Genus *Isolaimium* Timm, 1969 (11 species)

Subclass **Trichocephalia** Hodda, 2007 (1 superorder, 4 orders, 4 suborders, 4 superfamilies, 10 families, 12 subfamilies, 56 genera, 654 species)

Superorder **Trichocephalica** Hodda, 2007 (4 orders, 4 suborders, 4 superfamilies, 10 families, 12 subfamilies, 56 genera, 654 species)

Order **Trichocephalida** Spasski, 1954 (1 suborder, 1 superfamily, 5 families, 7 subfamilies, 37 genera, 597 species)

Suborder **Trichinellina** Hodda, 2007 (1 superfamily, 5 families, 7 subfamilies, 37 genera, 597 species)

Superfamily **Trichinelloidea** Ward, 1907 (Hall, 1916) (5 families, 7 subfamilies, 37 genera, 597 species)

Family **Capillariidae** Railliet, 1915 (1 subfamily, 20 genera, 416 species)

Subfamily **Capillariinae** Railliet, 1915 * (20 genera, 416 species)

Tribe **Capillariini** Railliet, 1915 *

Subtribe **Capillariinii** Railliet, 1915 *

Genus *Aonchotheca* Lopez-Neyra, 1947 (60 species)

regarded as a separate family but with no apomorphy to justify any other placements within higher taxonomic ranks (Lorenzen 1981, 1994). Considering all evidence the family has been placed in Plectida Haliplectoidea and Plectia (De Ley & Blaxter 2004, Hodda 2007, respectively). Others considered the evidence inconclusive (Holovachov *et al.* 2007). With strong molecular support for affinities of Isolaimiidae and Aulolaimidae, the similarities in the head structure of Isolaimiidae and Mermithidae have added weight and justify placing Isolaimiidae and Aulolaimidae as a suborder within Mermithida.

116 Aulolaimidae has been placed with either Monhysterida or Plectida (Haliplectoidea) on molecular evidence (De Ley & Blaxter 2004, Holterman *et al.* 2006), was unresolved in later molecular analyses (Van Meegen *et al.* 2009), or most closely related to *Cylindrolaimus* (Arealaimina) (Abolafia & Pena-Santiago 2018a). The family was placed within Enoplida (Ironoidea) or Plectida (Leptolaimina) on morphological grounds (Andrassy 1976, Lorenzen 1994). A polychotomy with Monhysterida and Plectida was therefore proposed, with consequent rank as a separate Order within the subclass Plectia (Hodda 2007).

117 Created as a subfamily by Jairajpuri & Hooper (1968).

118 Molecular evidence points to unresolved similarities of Isolaimoidea to Bathyodontia, Dorylaimida and Araeolaimida (De Ley & Blaxter 2004, Meldal *et al.* 2007, Holterman *et al.* 2006). Morphological evidence has been viewed as similarly inconclusive within the same group of phyla (Timm 1961, Theodorides 1965, De Coninck 1965). Isolaimina contains few, poorly-known species. It was regarded as a separate Order (Cobb 1919, Hodda 2007, Timm 1961), based on the apomorphy of 6 tubules around the head. As constituted in the present classification, Aulolaimina and Mermithida can accommodate the family on the basis of similarities in head structure and general body size. However, this placement is provisional and more investigation will be necessary to place the family with any certainty.

Subgenus *Aonchotheca* Lopez-Neyra, 1947 (56 species)

Order **Muspiceida** Spratt & Nicholas, 2002 (1 suborder, 1 superfamily, 2 families, 2 subfamilies, 9 genera, 14 species)¹²⁰

Suborder **Muspiceina** Spratt & Nicholas, 2002 (1 superfamily, 2 families, 2 subfamilies, 9 genera, 14 species)

Superfamily **Muspicioidea** Brumpt, 1930 (Bain & Chabaud, 1968) (2 families, 2 subfamilies, 9 genera, 14 species)

119 Created as suborder Dioctophymata (Chitwood 1933), but this pre-dates adoption of current uniform endings for names of higher ranks. First to use in current form was Clark (1961).

120 Placed in this superorder on morphological evidence (Anderson & Bain 1982, Spratt & Nicholas 2002). Authority often cited as Bain & Chabaud 1959, but such a publication has been unable to be located, and Odile Bain did not join the MHN to work with Alain Chabaud until 1964 (Martin 2012). The earliest verifiable source by these authors on the group (Bain & Chabaud 1968) refers to the group as a Family. The affinities and taxonomic position of the group has long been uncertain (Spratt & Nicholas 2002), but the unique features generating this uncertainty (often through reduction or loss of morphological structures) also mean that a separate order is (at least provisionally) justified (Spratt 2014). The earliest use of the name as an order that was located in an extensive search was Spratt & Nicholas (2002), although a formal description and diagnosis as an order was first published by Spratt (2014).

 Genus *Macrochromadora* Kreis, 1929 (1 species)¹²⁹
 Genus *Prochromadora* Filipjev, 1922 (10 species)¹³⁰

121 The authority is often cited as Roman (1965), who fully characterized the family, but the earliest use of the name and diagnosis was by Brumpt (1930).

122 Originally described as a sub-family by Brumpt (1930).

123 Spermatogenesis and development provide evidence for the separation of Chromadorea from Dorylaimea and Enoplea (Yushin & Malakhov 2004, Schierenberg & Lahl 2004).

124 Classification and number of species follows Venekey *et al.* (2019).

125 Genus dubium according to Venekey *et al.* (2019), who did not accept the differentiating feature proposed by Heyns & Furstenberg (1987) of lateral differentiation of the cuticle. As lateral differentiation of cuticle is a commonly used differentiating feature in Chromadoroidea, the genus is regarded as valid herein.

126 Including species inquirenda generally described before 1960.

127 Excluding 2 species inquirenda according to Venekey *et al.* (2019).

128 Excluding 5 species inquirenda according to Venekey *et al.* (2019).

129 Not mentioned by Venekey *et al.* (2019) or other recent revisers, so included until reviewed, but probably a genus dubium.

130 According to Venekey *et al.* (2019).

- Genus *Endeolophos* Boucher, 1976 (5 species)¹³⁸
 Genus *Euchromadora* De-Man, 1886 (26 species)¹³⁹
 Genus *Euchromanema* Kulikov & Dashchenko, 1991 (2 species)¹⁴⁰
 Genus *Graphonema* Cobb, 1898 (10 species)¹⁴¹
 Genus *Nygmatonchus* Cobb, 1933 (1 species)¹⁴²
 Genus *Parapinnanema* Inglis, 1969 (1 species)¹⁴³
 syn *Austranema* Inglis, 1969 (Warwick & Coles, 1975)
 Species *hawaiiensis* Semprucci & Sorensen, 2014
 Genus *Portmacquaria* Blome, 2005 (1 species)
 Genus *Rhips* Cobb, 1920 (9 species)¹⁴⁴

131 Excluding 6 species inquirenda according to Venekey *et al.* (2019).

132 According to Venekey *et al.* (2019).

133 Genus dubium

134 According to Venekey *et al.* (2019).

135 According to Venekey *et al.* (2019).

136 *Dicriconema* Steiner & Hoepli 1926 has been regarded as genus dubium by the majority of studies over the last 50 years (Inglis 1969, Kulikov & Dashchenko 1991, Wieser 1954) although it has also been considered invalid (Venekey *et al.* 2019) and omitted without comment (Tchesunov 2014) and considered valid without comment (Gerlach & Riemann 1973, Lorenzen 1994). Given the agreed close relationship with the genus *Euchromadora*, and small, inconsistent differences in the cuticle meaning that these genera cannot be unequivocably diagnosed, it is regarded as a synonym of *Euchromadora*.

137 According to Venekey *et al.* (2019), but excluding 1 species inquirendum and 2 species described by Gagarin (2015).

138 According to Venekey *et al.* (2019).

139 Species number according to Venekey *et al.* (2019), but including 4 species incerta sedis and 12 species inquirenda all described before 1959. There are 2 subgenera (the nominotypical one plus *Odontocricus* Steiner 1918), with the single species of the latter mostly considered species dubium (Inglis 1969, Lorenzen 1994, Wieser 1954), but considered valid by others (Cobb 1933 (who considered *Odontocricus* a genus), Coles 1965).

140 Genus dubium according to Venekey *et al.* (2019), but here regarded as valid, differing from *Endeolophos* by the developed posterior pharyngeal bulb (absent in *Endeolophos*; Holovachov *et al.* 2011, Tchesunov 2014 and Venekey *et al.* 2019), and differing from *Actinonema* by the cuticular ornamentation (simple vs complex).

141 According to Venekey *et al.* (2019), but including 1 species inquirendum described in 1954 and excluding 2 nomina nuda.

142 According to Venekey *et al.* (2019).

143 According to Venekey *et al.* (2019).

144 According to Venekey *et al.* (2019), but including 1 species inquirendum described in 1961.

 Subtribe **Harpagonchinii** Platonova & Potin, 1972 *
 Genus *Harpagonchoides* Platonova & Potin, 1972 (1 species)
 Genus *Harpagonchus* Platonova & Potin, 1972 (2 species)
 Subfamily **Hypodontolaiminae** De-Coninck, 1965 (16 genera, 169 species)
 Tribe **Hypodontolaimini** De-Coninck, 1965 *
 Subtribe **Hypodontolaiminii** De-Coninck, 1965 *
 Genus *Chromadorissa* Filipjev, 1918 (3 species)¹⁴⁷
 Genus *Chromadorita* Filipjev, 1922 (38 species)¹⁴⁸
 Species *fennica* Jensen, 1979
 syn *arctica* Gagarin, 1999 (Tsalolikhin, 2019)
 Species *orientalis* Gagarin & Thanh, 2017
 Species *regabi* Baldrighi, Vanreusel, Zeppilli, Sandulli & Segonzac, 2018
 Genus *Dasylaimus* Cobb, 1933 (1 species)¹⁴⁹
 Genus *Deltanema* Kreis, 1929 (1 species)¹⁵⁰
 Genus *Denticulella* Cobb, 1933 (4 species)¹⁵¹
 Genus *Dichromadora* Kreis, 1929 (2 species)¹⁵²
 syn *Protochromadora* Inglis, 1969 (Warwick & Coles, 1975)
 Species *antarcticum* Shimada, Tsujimoto & Watanabe, 2019
 Species *rigida* Nguyen, Nguyen & Gagarin, 2016
 Genus *Hypodontolaimus* De-Man, 1886 (30 species)¹⁵³
 Species *ventrapophyses* Huang & Gao, 2016
 Genus *Innocuonema* Inglis, 1969 (10 species)¹⁵⁴
 Genus *Karkinochromadora* Blome, 1982 (1 species)¹⁵⁵
 Genus *Megadontolaimus* Timm, 1969 (2 species)
 Genus *Neochromadora* Micoletzky, 1924 (32 species)¹⁵⁶
 Genus *Panduripharynx* Timm, 1961 (3 species)
 Genus *Parachromadorita* Blome, 1974 (1 species)

145 According to Venekey *et al.* (2019), but including 1 species inquirendum described in 1969.

146 According to Venekey *et al.* (2019), but excluding 1 nomen nudum.

147 According to Venekey *et al.* (2019).

148 According to Venekey *et al.* (2019), but including 2 species inquirenda described before 1916 and including 3 nomina nuda, which, according to Venekey *et al.* (2019) are well characterized and divergent from others in the genus, but lack a valid name.

149 Mostly regarded as genus dubium, based on limited specimens and information in the description (Hope & Murphy 1972, Kulikov & Dashchenko 1991, Lorenzen 1994, Venekey *et al.* 2019), but included in the subfamily by Wieser (1954).

150 Mostly regarded as genus dubium, based on limited specimens and information in the description (Smol & Decraemer 2006, Tchesunov 2014, Venekey *et al.* 2019), but recognized as valid by Lorenzen (1994). The genus is close to *Chromadorina* and *Chromadorita* but distinguished from these genera by the well-developed teeth (Kreis 1929).

151 According to Venekey *et al.* (2019).

152 According to Venekey *et al.* (2019), but including 1 species which, according to Venekey *et al.* (2019) is well characterized and divergent from others in the genus, but lacks a valid name, and so is a *nomen nudum*.

153 According to Venekey *et al.* (2019), but including 2 species inquirenda described before 1951, and hence difficult to verify by modern criteria.

154 According to Venekey *et al.* (2019), but including 5 species inquirenda all described by Allgen (1932, 1947), and hence difficult to verify by modern criteria.

155 Regarded as valid by Tchesunov (2014) and Venekey *et al.* (2019).

156 According to Venekey *et al.* (2019), but including 1 species inquirendum described in 1943, and hence difficult to verify by modern criteria.

Genus *Paradichromadora* Dashchenko, 1991 (1 species)¹⁵⁷
 Genus *Ptycholaimellus* Cobb, 1920 (26 species)¹⁵⁸
 Species *longibulbus* Wang, An & Huang, 2015
 Species *pirus* Huang & Gao, 2016
 Genus *Spilophorella* Filipjev, 1918 (14 species)¹⁵⁹
 Subfamily **Spilipherinae** Filipjev, 1918 (4 genera, 69 species)
 Tribe **Spilipherini** Filipjev, 1918 *
 Subtribe **Spilipherinii** Filipjev, 1918 *
 Genus *Acantholaimus* Allgen, 1951 (57 species)¹⁶⁰
 Species *formosus* Miljutina, Miljutin & Tchesunov, 2013
 Species *marliae* Manoel, Da-Silva & Esteves, 2017
 Species *skukinae* Miljutina, Miljutin & Tchesunov, 2013
 Genus *Spiliphera* Bastian, 1865 (9 species)¹⁶¹
 Genus *Trichromadorita* Timm, 1961 (2 species)¹⁶²
 Genus *Tridentellia* Gerlach & Riemann, 1973 (1 species)¹⁶³
 Family **Ethmolaimidae** Lorenzen, 1981 (1 subfamily, 4 genera, 27 species)
 Subfamily **Ethmolaiminae** Lorenzen, 1981 * (4 genera, 27 species)
 Tribe **Ethmolaimini** Lorenzen, 1981 *
 Subtribe **Ethmolaiminii** Lorenzen, 1981 *
 Genus *Ethmodora* Khera, 1975 (1 species)
 Genus *Ethmolaimus* De-Man, 1880 (17 species)
 Species *riparius* Gagarin & Naumova, 2016
 Genus *Filitonchoides* Jensen, 1985 (1 species)
 Genus *Paraethmolaimus* Jensen, 1994 (8 species)
 Species *appendixocaudatus* Jensen, 1994
 Species *dahli* (Gerlach, 1953) Jensen, 1994
 Species *minor* Nguyen & Gagarin, 2018
 Family **Nemavermidae** Poinar, 2011 (1 subfamily, 1 genus, 2 species)
 Subfamily **Nemaverminae** Poinar, 2011 * (1 genus, 2 species)
 Tribe **Nemavermini** Poinar, 2011 * (1 genus)
 Subtribe **Nemaverminii** Poinar, 2011 *
 Genus *Nemavermes* Schram, 1973 (2 species)
 Species *mackeei* Schram, 1973
 Family **Neotonchidae** Lorenzen, 1981 (1 subfamily, 5 genera, 25 species)
 Subfamily **Neotonchinae** Lorenzen, 1981 * (5 genera, 25 species)
 Tribe **Neotonchini** Lorenzen, 1981 *
 Subtribe **Neotonchinii** Lorenzen, 1981 *
 Genus *Comesa* Gerlach, 1956 (11 species)
 Genus *Filitonchus* Platt, 1982 (3 species)

157 Possibly a synonym of *Chromadorita* (Venekey *et al.* 2019), but status remains uncertain.

158 According to Venekey *et al.* (2019).

159 According to Venekey *et al.* (2019), but including 1 nomen nudum described by Wieser (1959), and hence difficult to verify by modern criteria.

160 According to Venekey *et al.* (2019), but including 13 species as *nomina nuda* which, according to Venekey *et al.* (2019) are well characterized and divergent from others in the genus, but lack valid names because described in theses (Bussau 1993, Soetaert 1989). The nomenclatural availability of the nomina proposed by Bussau (1993) in a thesis have been controversial and not always accepted, but were considered to fulfil all requirements of the ICZN by Holovachov (2020).

161 According to Venekey *et al.* (2019), but including 7 species inquirenda described before 1959, mostly by Allgen (1959), and hence difficult to verify by modern criteria.

162 Considered valid by Lorenzen (1994) but genus dubium by Venekey *et al.* (2019).

163 Considered invalid by Venekey *et al.* (2019), but with affinities to the genus *Acantholaimus* by Gerlach & Riemann (1973) and Lorenzen (1994). Status and affinities unclear because of limitations in specimens and description.

¹⁶⁴ Leduc & Zhao (2018) suggest *Praeacanthonchus* may be better placed in Paracanthonchinae, based on molecular evidence, but the level of support for this conclusion was low and the taxon sampling sparse. This conclusion may have support from cuticular characteristics, but is contrary to the alternative placement of the genus in Cyatholaiminae based on gubernaculum structure.

Genus *Acanthonchus* Cobb, 1920 (3 species)

 Genus *Trogolaimus* Cobb, 1920 (5 species)

165 Following revision by Miljutina & Miljutin (2015).

166 In molecular phylogenies, this group is either not represented (Meldal *et al.* 2007), unresolved (Holterman *et al.* 2006, Van Megen *et al.* 2009) or placed within Chromadorina (De Ley & Blaxter 2004). In morphological phylogenies, the group is either within the Chromadorina (Filipjev 1934, Lorenzen 1994), a sister group to Chromadorina within an expanded Chromadorida (Maggenti 1991), or within the Desmodorida (Chitwood & Chitwood 1950, De Coninck 1965, Gerlach & Riemann 1973, 1974). There are a number of seemingly unique morphological features in the group, such as the structure of the buccal cavity, the staining characteristics of the cuticle, the jointed structure of cephalic setae, and large intestinal cells (Filipjev 1934, Gerlach 1964, Lorenzen 1994). These morphological features, combined with the unresolved position in molecular analyses (Holterman *et al.* 2006, Van Megen *et al.* 2009), imply that the relationships with Chromadorida and Desmodorida must be viewed currently as a polytomy. Hence the group is afforded Order status equivalent to Chromadorida and Desmodorida.

167 A separate, valid family with affinities to Selachinematidae, based on molecular evidence, according to Leduc *et al.* (2018).

168 Although the families Selachinematidae, Richtersiidae, Choniolaimidae and Choanolaimidae have been synonymized (Gerlach 1964, Lorenzen 1981), there remain many significant differences (Gerlach 1964). Given the possible nature of the Selachinematida as a distinct clade, these differences seem to justify regarding the differences as justifying family status. A revision of the entire Selachinematida is needed.

Family **Richtersiidae** Kreis, 1929 (De-Coninck, 1965) (1 subfamily, 2 genera, 21 species)¹⁶⁹
 Subfamily **Richtersiinae** Kreis, 1929 (2 genera, 21 species)¹⁷⁰

 Order **Desmodorida** De-Coninck, 1965 (1 suborder, 2 superfamilies, 7 families, 13 subfamilies, 98 genera, 926 species)¹⁷⁵

169 Although the families Selachinematidae, Richtersiidae, Choniolaimidae and Choanolaimidae have been synonymized (Gerlach 1964, Lorenzen 1981), there remain many significant differences (Gerlach 1964). Given the possible nature of the Selachinematida as a distinct clade, these differences seem to justify regarding the differences as justifying family status. A revision of the entire Selachinematida is needed.

170 Originally named "Richtersiaceae". Placed in Desmodorida by Gerlach & Riemann (1973).

171 Genus and species dubia.

172 Although the families Selachinematidae, Richtersiidae, Choniolaimidae and Choanolaimidae have been synonymized (Gerlach 1964, Lorenzen 1981), there remain many significant differences (Gerlach 1964). Given the possible nature of the Selachinematida as a distinct clade, these differences seem to justify regarding the differences as justifying family status. A revision of the entire Selachinematida is needed.

173 Although the families Selachinematidae, Richtersiidae, Choniolaimidae and Choanolaimidae have been synonymized (Gerlach 1964, Lorenzen 1981), there remain many significant differences (Gerlach 1964). Given the possible nature of the Selachinematida as a distinct clade, these differences seem to justify regarding the differences as justifying family status. A revision of the entire Selachinematida is needed.

174 Genus and species dubia.

175 On all available evidence, regarded as a separate order (DeLey & Blaxter 2004, De Ley *et al.* 2006, Decraemer & Smol 2006, Hodda

Suborder **Desmodorina** De-Coninck, 1965 (2 superfamilies, 7 families, 13 subfamilies, 98 genera, 926 species)

Superfamily **Desmodoroidea** Filipjev, 1922 (Chitwood, 1936) (3 families, 9 subfamilies, 76 genera, 707 species)

Family **Desmodoridae** Filipjev, 1922 (Steiner, 1927) (5 subfamilies, 48 genera, 418 species)¹⁷⁶

Subfamily **Desmodorinae** Filipjev, 1922 (20 genera, 201 species)

Species *waweri* Muthumbi & Vincx, 2016

Genus *Pseudochromadora* Daday, 1899 (14 species)¹⁸⁰

2007), although molecular evidence has the group as a subset of Chromadorida (Van Megen *et al.* 2009) or grouped with Desmoscolecida (Litvaitis *et al.* 2000) or split among other groups (Holterman *et al.* 2006). Morphologically, it has been classified as a subset of Chromadorida (Lorenzen 1994), but this is compatible with the current classification if the Chromadorida of Lorenzen (1994) is here equivalent to superorder Chromadorica.

176 Regarded as paraphyletic based on molecular analyses (Meldal *et al.* 2007, van Megen *et al.* 2009, Leduc & Zhao 2016), but holophyletic by Armenteros *et al.* (2014a). All the molecular analyses are based on a relatively few sequences, which do not cover all the proposed clades, however.

177 Originally created as a subgenus of *Desmodora*.

178 Considered a synonym of *Desmodora* by Lorenzen (1976).

179 Considered a valid genus by Gagarin & Thanh (2015).

180 Considered valid genera by Gagarin & Thanh (2015).

 Species *verae* Maria, Smol & Esteves, 2014

Subgenus *Neonyx* Cobb, 1933 (Gerlach, 1951) (1 species)

Genus *Metachromadoroides* Timm, 1961 (De Coninck, 1965) (2 species)
 Genus *Onyx* Cobb, 1891 (13 species)
 Species *rizhaoensis* Huang & Wang, 2015

181 Originally created as a subgenus of *Desmodora*.

¹⁸² Only 9 valid species according to Tsalolikhin (2014).

183 Originally established as tribe Spirinacea by Chitwood (1936). Raised to subfamily,
family and superfamily rank by De Coninck (1965). Gerlach & Murphy (1965) often incorrectly cited as authors (see Leduc & Verschelde
2015).

184 Originally created as a genus by Filipjev (1918), but reduced to subgenus of *Metachromadora* by Gerlach (1951) and Gerlach & Riemann (1973). Other subgenera were *Bradyaimus*, *Metachromadoroides* and *Neonyx*. Lorenzen (1994) also regarded as a subgenus of *Metachromadora* but with *Metonyx* as an additional subgenus. Considered as valid genera by Armenteros et al. (2014).

- Species *brevis* Gagarin & Thanh, 2019
- Species *obesus* Phan, Gagarin, Nguyen, Nguyen & Nguyen, 2017

186 Created as subfamily Draconematini by Filipjev (1918).

187 Proposed as family by Allen & Noffsinger (1978) but as subfamily by Lorenzen (1981), a suggestion followed by Decraemer (1989).

188 Considered a separate Order Microlaimida by Leduc *et al.* (2018), based on molecular evidence, but the number and range of taxa for which sequences are available within the proposed Microlaimida and related Desmodorida and Chromadorida are very limited, and so this conclusion requires further confirmation. These authors noted a lack of any morphological synapomorphies between Desmodoroidea and Microlaimoidea.

189 Synonymized with the genus *Microlaimus* by Kovalyev & Tchesunov (2005), but considered valid in the latest revision (Tchesunov 2014).

190 Species according to Leduc (2016).

191 Molgolaimidae is a separate, valid family, based on molecular evidence, according to Leduc *et al.* (2018).

192 Placed in Desmodoridae by Lorenzen on the basis of reflexed ovaries and testis, but in Microlaimidae by Platt & Warwick (1988) because of great overall similarity to Microlaimidae in all other characters. Note that Lorenzen transferred some species without reflexed ovaries and testis back to Microlaimidae to make the genus monophyletic. I have agreed with Platt & Warwick (1988). Leduc & Zhao (2016) on the basis of molecular evidence from a single species regard it as having closer affinities with Microlaimidae. Sequences from a species found and described subsequently confirmed the affinities with Microlaimidae (Leduc *et al.* 2018), but because consistent morphological differences remain, a separate family within Microlaimoidea is justified.

193 First classified in Chromadoridae (Kreis 1929), but later moved to Monoposthiidae on the basis of cuticular pattern (Hope & Murphy 1972). Lorenzen (1994) evaluated cuticular ornamentation as not very useful as a differential character for genera and hence returned the genus to Family Chromadoridae. Decraemer & Smol (2006) evaluated the taxonomic position of the genus as unclear because the definition is based on a poor description of a single species, and Tchesunov (2014) omitted the genus from his review without any comment. Venekey *et*

 Tribe **Meyliini** De-Coninck, 1965 *

al. (2019) accepted the conclusions of Hope & Murphy (1972) and considered the genus as part of Monoposthiidae.

194 Originally named order Desmoscolecata (Filipjev 1929) prior to adoption of current system of uniform endings of higher-ranked taxon names. First used in current form by De Coninck (1965).

195 Originally named suborder Desmoscoleata (Chitwood 1933) prior to adoption of current system of uniform endings of higher-ranked taxon names. First used in current form by De Coninck (1965).

196 Includes 4 species from the synonymised genus *Southernia* Allgen 1929

197 Fossil, cretaceous, Norway.

198 Classified in a separate family Captivonematidae by Poinar (2011), on the basis of available characters being inadequate to place it either family Greeffiellinae or Epsilonematodae. The size, shape, coarseness of annulation and pattern of body hairs are sufficient to place it within Meyliidae.

Genus *Tridentulus* Eyualem & Coomans, 1995 (6 species)

Genus *Tripylum* Cobb, 1920 (2 species)

Superfamily *Sphaerolaimoidea* Filipjev, 1918 (De-Coninck, 1965) (2 families, 5 subfamilies, 59 genera, 650

201 Monhysteridae according to Eyualem & Coomans (1995) and Jacobs (1987), but Syringolaiminae Rhabdolaimidae according to Lorenzen (1981, 1994). The former is more parsimonious than the latter if all characters are considered; the latter is favoured by many fewer characters, but perhaps they are more phylogenetically informative. Because the phylogenetic content of some of the characters favoured by Lorenzen has not always been supported, the former is favoured.

- species)
- Family **Xyalidae** Lorenzen, 1977 (3 subfamilies, 53 genera, 563 species)

Subfamily **Thelonematinae** Bussau, 1993 (1 genus, 4 species)

- Tribe **Thelonematini** Bussau, 1993 *
- Subtribe **Thelonematinii** Bussau, 1993 *

206 Synonymy not accepted but also not mentioned by Holovachov (2019).

207 Lorenzen (1994) regarded all the genera described by Allgen (1930) as dubious and their placement not fully certain.

208 Synonymized with *Paralinhomoeus* by Hendelberg (1979), but retained as a valid, separate genus by Lorenzen (1994).

Genus *Thelonema* Bussau, 1993 (4 species)²⁰⁹
 Species *clarki* Leduc, 2015

219 Fossil, Lebanese amber.

220 Fossil, Dominican amber.

221 Fossil, Dominican amber.

222 Type species is *Yeatesinia* Holovachov & Bostrom 2014. Diagnostic features are: the dorsal position of the mouth opening; unequal size and asymmetrical arrangement of anterior sensory structures (sensilla and setae) possibly related to the subterminal position of the oral opening; the presence of large, lateral, horn-like projections at the anterior end; dorsal annules narrower than ventral annules and separated by broad grooves rather than narrow grooves; and lateral alae appearing as a ridge, formed by extensions of annules from dorsal body surface overlapping annules of ventral body surface and with a shingle-like appearance. In other subfamilies the mouth is terminal; the anterior sensillae are similar in size and symmetrical; anterior projections are absent; annules are nearly equally spaced dorsally and ventrally; and the annules do not overlap or form a shingle-like ridge. Otherwise with the features of the family.

223 There is ongoing controversy over the rendering of names ending in "gaster" with a suffix. See note 233: cited as either Chronogastriidae (Siddiqi 2003, Holovachov 2004, Mountport 2005, Holovachov & De Ley 2006), or Chronogasteridae (Ettema *et al.* 2000, Gagarin 1993, Gagarin *et al.* 2003, Hodda 2003, 2007, Lorenzen 1981, Poinar & Sarbu 1994, Zullini *et al.* 2002).

 Genus *Neurella* Cobb, 1920 (1 species)

 Genus *Onchiolista* Blome, 2002 (3 species)

 Genus *Onchium* Cobb, 1920 (10 species)

224 Metateratocephalidae (including the genera *Metateratocephalus* and *Euteratocephalus*) have been included in Teratocephalidae on morphological grounds (Lorenzen 1981, 1994). Other morphological evidence (Bostrom 1989) and molecular studies (Holtermann *et al.* 2006, Van Megen *et al.* 2009) have indicated separate evolutionary paths.

225 Camacolaiminae was regarded as a subfamily of Leptolaimidae by Lorenzen (1994), but there was no morphological apomorphy to justify this placement. Molecular evidence suggests affinities with Plectoidea, so it is placed there (Van Megen *et al.* 2009).

Species *longispiculum* Holovachov, 2015
 Genus *Procamacolaimus* Gerlach, 1954 (7 species)
 Genus *Smithsoninema* Hope & Tchesunov, 1999 (1 species)

Superfamily **Haliplectoidea** Chitwood, 1951 (Andrassy, 1974) (2 families, 2 subfamilies, 4 genera, 39 species)

 Genus *Trophomera* Rubtsov & Platonova, 1974 (2 species)

Superorder **Teratocephalica** Hodda, 2007 (1 order, 1 suborder, 1 superfamily, 1 family, 1 subfamily, 2 genera, 22 species)²²⁹

Order **Teratocephalida** Goodey, 1963 (1 suborder, 1 superfamily, 1 family, 1 subfamily, 2 genera, 22 species)
 Suborder **Teratocephalina** Andrassy, 1974 (1 superfamily, 1 family, 1 subfamily, 2 genera, 22 species)
 Superfamily **Teratocephaloidea** Andrassy, 1958 (Andrassy, 1974) (1 family, 1 subfamily, 2 genera, 22 species)
 Family **Teratocephalidae** Andrassy, 1958 (1 subfamily, 2 genera, 22 species)

226 Subfamily created by Vitiello & De Coninck (1968).

227 Subfamily created by Chitwood (1951).

228 Benthimerithida was unplaced in previous classifications (De Ley & Blaxter 2004, De Ley *et al.* 2006, Hodda 2007). Morphological evidence of phylogeny is unclear. Molecular evidence is lacking. Provisionally placed in Plectida on the basis of some similarity to Cama-colaimus (Miljutin 2006, Miljutin & Tchesunov 2001, Tchesunov 1997).

229 After a long period of uncertainty regarding phylogeny, Teratocephalidae was placed in a separate order on morphological evidence (Goodey 1963). Other interpretations have placed the family in Leptolaimina or Rhabditida (Lorenzen 1994, Andrassy 1976) or as unresolved (Zhang & Baldwin 2001, Blaxter *et al.* 2000). Early molecular evidence suggested either a suborder within Rhabditida or Plectida (Holterman *et al.* 2006, Meldal *et al.* 2007) or an unresolved position (De Ley & Blaxter 2004). As a result of the conflicting evidence, an unresolved polytomy was suggested (Hodda 2007). The most recent molecular analysis placed the family as a separate, resolved clade equivalent with Rhabditida (Van Megen *et al.* 2009), hence confirming status as a superorder, but now resolved. Several authors have commented on the apparently very different phylogeny of this group, and speculated that such a high taxonomic level is not justified (eg Goodey 1963). However, current evidence means that this is the only viable status, and the Teratocephalidae is well supported molecularly (Van Megen *et al.* 2009).

Subfamily **Teratocephalinae** Andrassy, 1958 (2 genera, 22 species)
 Tribe **Teratocephalini** Andrassy, 1958 *
 Subtribe **Teratocephalinii** Andrassy, 1958 *
 Genus *Steratocephalus* Andrassy, 1984 (1 species)
 Genus *Teratocephalus* De-Man, 1876 (21 species)
 Species *indicus* Shikha & Chaubey, 2019
 Superorder **Rhabditica** Hodda, 2007 (6 orders, 20 suborders, 50 superfamilies, 150 families, 278 subfamilies, 1809 genera, 16765 species)
 Order **Diplogasterida** Inglis, 1983 (3 suborders, 4 superfamilies, 9 families, 14 subfamilies, 71 genera, 540 species)
 Suborder **Chambersiellina** Hodda, 2007 (1 superfamily, 1 family, 2 subfamilies, 7 genera, 22 species)²³⁰
 Superfamily **Chambersielloidea** Thorne, 1937 (Hodda, 2007) (1 family, 2 subfamilies, 7 genera, 22 species)

 Tribe **Myolaimini** Goodey, 1963 *
 Subtribe **Myolaiminii** Goodey, 1963 *
 Genus *Cuticularia* Van-Der-Linde, 1938 (6 species)²³³
 Genus *Daubaylia* Chitwood & Chitwood, 1934 (9 species)
 Genus *Deleyia* Holovachov & Bostrom, 2006 (2 species)
 Genus *Myolaimus* Cobb, 1920 (9 species)
 Species *ibericus* Abolafia & Pena-Santiago, 2017
 Species *mycophilus* Slos & Bert in Slos, Couvreur & Bert, 2018
 Genus *Peplorhabditis* Ivanova, 1960 (1 species)²³⁴

230 On morphological evidence the family has been placed as unresolved in Rhabditia (Lorenzen 1994). On molecular evidence, the family has been unresolved within Diplogasterida (De Ley & Blaxter 2004). More research is clearly needed to place the few species in the mono-generic family, superfamily and suborder into anything other than a separate suborder under Diplogasterida, equivalent in rank to Myolaimina (Goodey 1963).

231 Following Abolafia & Pena-Santiago (2014).

232 Affinities with Diplogasterida were suggested by most molecular analyses (De Ley & Blaxter 2004, Holterman *et al.* 2006, Meldal *et al.* 2007), except where Myolaimidae was unresolved in the latest molecular analysis (Baerman *et al.* 2009, Slos *et al.* 2018, Van Megen *et al.* 2009). Morphologically, affinities with Rhabditida have been suggested also (Goodey 1963).

233 Assigned to Myolaimidae rather than Rhabditidae following the discussion of Sudhaus (2011). Synonymized with *Poikilolaimus* on the basis that monotypic genera are cladistically uninformative by Sudhaus (2011). This is rejected because of the morphological novelty of the genus, and because other species may be found subsequently.

234 Assigned to Myolaimidae rather than Rhabditidae following the discussion of Sudhaus (2011). Synonymized with *Poikilolaimus* on the basis that monotypic genera are cladistically uninformative by Sudhaus (2011). This is rejected because of the morphological novelty of the genus, and because other species may be found subsequently.

Genus *Praeputirhabditis* Khera, 1969 (1 species)²³⁵
 Genus *Poikilolaimus* Fuchs, 1930 (6 species)
 Superfamily **Carabonematoidea** Stammer & Wachek (Hodda, 2007) (1 family, 1 subfamily, 1 genus, 1 species)

 Genus *Goffartia* Hirschmann, 1952 (7 species)

235 Assigned to Myolaimidae rather than Rhabditidae following the discussion of Sudhaus (2011).

236 Molecular evidence of phylogeny of Carabonematidae is lacking (De Ley & Blaxter 2004, Van Megen *et al.* 2009). The position of the family is either unresolved within Rhabditina on morphological evidence (Stammer & Wachek 1952) or within Myolaimina (Inglis 1983). The family contains few, poorly-known species, and more investigation required.

237 There is controversy over the correct rendering of names based on the genus name *Diplogaster*, resting on formation of Latin adjectives and the form of nouns (Sudhaus & von Lieven 2003). The original use as a suborder was the form “Diplogasterata n. subord” (Paramonov 1952). Here, the most frequently used form is adopted. The position of the (well-defined) suborder was unresolved within Rhabditica on molecular evidence (Holterman *et al.* 2006, Meldal *et al.* 2007, Van Megen *et al.* 2009), but sometimes placed within Rhabditida (De Ley & Blaxter 2004). A separate clade of equal rank to Rhabditina and Tylenchina on morphological evidence (Lorenzen 1994).

238 Fossil, Dominican amber.

239 Created as a Family by Farooqui (1967).

syn *Myctolaimus* Cobb, 1920 (Susoy & Hermann, 2012)

syn *Cylindrogaster* T. Goodey, 1927 (Susoy & Hermann, 2012) (nec *Cylindrogaster* Stal, 1855)

syn *Goodeyus* Chitwood, 1933 (Susoy & Hermann, 2012)

syn *Cylindrocorpus* T. Goodey, 1939 (Susoy & Hermann, 2012)

syn *Protocylindrocorpus* Ruehm, 1959 (Susoy & Hermann, 2012)

251 Fossil, Dominican amber.

252 Fossil, Dominican and Mexican amber.

253 A valid genus according to Kanzaki Woodruff & Tanaka (2014), although poorly differentiated from *Parasitodiplogaster* and *Koerneria*.

254 Created as a family by Goodey (1936).

255 Included in Rhabditida by Hodda (2007), placed in Diplogasterida on molecular evidence (Van Megen *et al.* 2009), the evidence for morphological placement has long been in doubt.

256 Both species in this genus were described by Anand (2005, 2006), and both were found in association with fig wasps. The pharynx morphology and shape of the gymnostom suggest they may be in the enlarged genus *Rhabditolaimus*, but Susoy & Hermann (2012) could not unambiguously place them there, treating them instead as species incertae sedis pending further study. The differences are here regarded as sufficient to provisionally accept generic status.

- syn *Dirhabdilaimus* Paramonov & Turlygina, 1955 (Susoy & Herrmann, 2012)
 syn *Neodiplogasteroides* Ruehm in Koerner, 1954 (Meyl, 1960)

 Subtribe **Bunonematinii** Micoletzky, 1922 *
 Genus *Aspidonema* Sachs, 1949 (7 species)
 Species *formosa* Tahseen, Khan & Ahlawat, 2016

258 Created as a subfamily by Koerner (1954).

259 Placed in Pseudodiplogasteroididae on the basis of molecular evidence (Shokoohi *et al.* 2015).

260 Spermatogenesis and development provide evidence for the separation of Spirurida, Rhabditida and Panagrolaimida (Yushin & Malakhov 2004, Schierenberg & Lahl 2004).

261 On morphological evidence the family has been placed as unresolved in Rhabditida (Lorenzen 1994). On molecular evidence, the family has been unresolved within Rhabditida (De Ley & Blaxter 2004, Holterman *et al.* 2006, Meldal *et al.* 2007, Van Megen *et al.* 2009). In all cases a resolution between Rhabditina and Diplogasterina has not been possible. Hence regarded as a separate suborder..

262 Created as a subfamily by Paramonov (1956).

263 Diplogastrina [*sic*] and *Bunonema* have been regarded as closely related on the basis of five morphological synapomorphies: mainly related to fine structure of buccal cavity, but also genital papillae (Von Lieven & Sudhaus 2000). It is unclear what group(s) these characters are synapomorphies of: potentially they could be synapomorphies of Rhabditica, in which case these characters would not conflict with the molecular evidence placing *Bunonema* in Rhabditida (Holterman *et al.* 2006), but the affinities of Bunonematidae are unresolved in other analyses (Van Megen *et al.* 2009). Placed in Rhabditida on the basis of morphological similarity (De Ley *et al.* 2006, Goodey 1963, Hodda 2007), but as a separate suborder.

- Subfamily **Choriorhabditinae** n. subfam. * (3 genera, 7 species)

264 A subfamily according to Filipjev & Schuurmans Stekhoven (1941).

265 A separate superfamily pending resolution of affinities, which are currently unresolved on morphological or molecular evidence (Andrassy 1974, Meldal *et al.* 2007). Includes the genus *Rhabditoides* (Andrassy 1976), and clearly within Rhabditida (Andrassy 1976, De Ley *et al.* 2006, Hodda 2007). Andrassy (1976) originally proposed subfamily Ablechroiulinae to include the genera *Ablechroiulus* and *Rhabditoides* Goodey 1929, both genera having in common the possession of bundles of cirri-like bristles on lip region, among other features. Sudhaus & Fitch (2001) provided an updated classification of Rhabditidae Oerley 1980, but maintained on the basis of morphological and molecular data that *Ablechroiulus* was a junior synonym of *Rhabditis* (*Rhabditis*), one of the 15 subgenera in which Sudhaus (1976) subdivided the genus. Andrassy (1976, 1983, 1984, 2005) did not accept Sudhaus' scheme. Molecular phylogenies showed that one species of *Ablechroiulus* (*A. dudichi* or *Choriorhabditis dudichi* in Sudhaus' scheme), is not distinctly clustered with other representatives of the subgenus *Rhabditis*. This result was also obtained by Holterman *et al.* (2006). Kiontke & Fitch (2005) included three *Ablechroiulus* species in their molecular study (*A. brassicae*, *A. cristatus* and *A. dudichi*): *A. brassicae* clustered with *Rhabditis* species and the other two formed a clade at the base of the Eurhabditis group. The genus was re-examined by Abolafia & Pena Santiago (2009, 2011), who briefly discussed the identity of *Ablechroiulus*, and characterized it mainly on the basis of the presence of short labial setae, classifying it under the subfamily Rhabditinae Oerley, 1880, and regarding Ablechroiulinae Andrassy, 1976 as a junior synonym of that taxon. Sudhaus (2011) suggested *Choriorhabditis*, *Discoditis*, *Paradoxorhabditis* and the synonymized *Amplirhabditis* formed a monophyletic group with *Ablechroiulus* which was synonymized with *Choriorhabditis*. In view of the highly unresolved position of the group, either morphologically or molecularly, it is here regarded as a separate clade. The cirri-like bristles are a unique apomorphy.

266 Type genus is *Choriorhabditis* (Osche 1952). Diagnostic features are: lips with tufts of bristles; wall of gymnostome reinforced; GP2 & GP3 close together; and GP5 & GP6 close together. Lips without bristle tufts; wall of gymnostome normal; and GP 2/3 and 5/6 spaced in other families. Otherwise with the features of the superfamily.

Species *dominicana* Poinar, 2011

Genus *Uniovaria* Khera, 1969 (1 species)²⁷⁴

Subfamily **Crustorhabditinæ** n. subfam. (5 genera, 15 species)²⁷⁵

267 Type genus is *Rhabditoides* T. Goodey 1929. Diagnostic features are: lips closed; glottis present; 3 denticles in each sector of stoma; and GP arranged radially. Lips open; glottis absent; less than 3 denticles; and GP not arranged radially in other families. Otherwise with the features of the superfamily.

268 A separate lineage associated with *Mesorhabditis* and *Pelodera* according to Sudhaus (2011). Type genus is *Haematozoon* Leisering 1865. Diagnostic features are: long narrow stoma with posterior cup-shaped; separate spicules; and radial GP. Stoma shorter with posterior not cup-shaped; spicules partially fused; and GP arranged otherwise in other families. Otherwise with the features of the superfamily.

269 Created as a subfamily by Andrassy (1976).

270 Synonymized with *Mesorhabditis* on the basis that monotypic genera are uninformative by Sudhaus (2011). This is rejected because of the morphological novelty of the genus, and because other species may be found subsequently.

271 Synonymized with *Mesorhabditis* on the basis that monotypic genera are uninformative by Sudhaus (2011). This is rejected because of the morphological novelty of the genus, and because other species may be found subsequently.

272 Fossil, Baltic amber.

273 Fossil, Dominican amber.

274 Synonymized with *Mesorhabditis* on the basis that monotypic genera are uninformative by Sudhaus (2011). This is rejected because of the morphological novelty of the genus, and because other species may be found subsequently.

275 Distinct from *Mesorhabditis* and related genera (Sudhaus 2011). Type genus is *Crustorhabditis* Sudhaus 1974. Diagnostic feature is: spicules fused for at least 1/3 of their length. Spicules fused less in other subfamilies. Otherwise with the features of the family.

syn *Entomelas sylvestris* Baker, 1982 Tkach, Halajian & Kuzmin, 2014

Genus *Serpentirhabdias* Tkach, Kuzmin & Snyder, 2014 (18 species)

Species *attracti* Kuzmin, De-Vasconcelos-Melo & Dos-Santos, 2014

Species *atroxi* Kuzmin, Giese, De-Vasconcelos, Francisco, Ferreira, Borges-da-Costa, Maschio & Dos-Santos, 2016

276 The genus *Parasitorhabditis* was previously placed in Rhabditidae, but it is unambiguously a separate clade associated with Peloderina on molecular evidence (Holterman *et al.* 2006, Meldal *et al.* 2007). According to Sudhaus (2011), related to *Pelodera*, but more closely related to *Mesorhabditis*. Hence regarded as a separate family related to both.

277 A distinct lineage arising independently of *Caenorhabditis*, and *Heterorhabditis* and *Rhabditis* according to Sudhaus (2011).

278 A separate clade according to the molecular analysis of Chilton *et al.* (2006)

279 Fossil, Baltic amber.

280 Fossil, Burmese amber.

281 A distinct lineage associated with *Mesorhabditis* and *Pelodera* according to Sudhaus (2011). Type genus is *Cruznema* Artigas 1927. Diagnostic features are: glottis present; labial hooks absent; and phasmid anterior to GP7. Glottis absent; labial hooks present; and phasmid position variable in other families. Otherwise with the features of the superfamily.

282 Diagnostic features are: phasmids at anus level and ray-like; and 8 GP.

283 Type genus is *Rhabpanus* Massey 1971. Diagnostic features are: phasmids inconspicuous and at base of GP7; and 8 or 9 GP. Phasmids at anus level and ray-like; and 8 GP in the other subfamily. Otherwise with the features of the family.

Tribe **Rhabpanini** n. tribe *

Subtribe **Rhabpaninii** n. subtribe *

Species *parvicauda* Stevens, Felix, Beltran, Braendle, Caurcel, Fausett, Fitch,

284 Also proposed as a subfamily by Chitwood & Chitwood (1937), see Goodey (1963)..

285 Type genus is *Sclerorhabditis* Ahmad Shah & Mahamood 2007. Diagnostic feature is the structure of the cuticularized plates on the anterior surface of the mouth (less elaborated in other tribes). This justifies a separate tribe. Otherwise with the features of the subfamily. Shares the cuticularized plates on the anterior surface around the mouth with other members of the subfamily.

286 Originally created as a subfamily by Timm (1961).

287 Type genus is *Caenorhabditis* Osche 1952. Diagnostic features are: teeth absent in stoma; GP6 thickened; and GP5 & GP7 not dorsal. Teeth absent or small; GP6 normal; and GP5 & GP7 not dorsal in other tribes. Otherwise with the features of the subfamily.

288 Excluding many species described by Felix *et al.* (2014).

- syn *Rhabditis reciproca* Sudhaus, 1974 (Kanzaki, Kiontke, Tanaka, Hirooka, Schwarz, Muller-Reichert, Chaudhuri & Pires-Da-Silva, 2017)

Species *rhodensis* Kanzaki, Kiontke, Tanaka, Hirooka, Schwarz, Muller-Reichert, Chaudhuri & Pires-Da-Silva, 2017

Species *seurati* (Maupas, 1916) Kanzaki, Kiontke, Tanaka, Hirooka, Schwarz,

293 According to Ross *et al.* (2018).

294 The 3 genera *Auanema*, *Cephaloboides*, and *Rhabditella* were shown to form a distinct clade by molecular and biological evidence by Kanzaki *et al.* (2017), but no formal grouping was named, and sampling was sparse.

295 Created as a family by Andrassy (1983).

296 First used as a subgenus of *Rhabditis* Rahm (1928). Full diagnosis by Sudhaus (1976). Species number according to Tahseen et al. (2017).

297 Type genus is *Diploscapteroides* Rahm 1928. Diagnostic features are: all GP post cloacal; and tail sexually dimorphic—long conoid in females and spike-like in males. Some GP pre cloacal; and tail not sexually dimorphic—either long conoid in both sexes or spike-like in both sexes in other tribes. Otherwise with the features of the subfamily.

298 Type genus is *Rhabditella* Cobb 1929. Diagnostic features are: some GP pre cloacal; and tail not sexually dimorphic—long conoid in both sexes. Either all GP post-cloacal or tail spike-like in both sexes in other tribes. Otherwise with the features of the subfamily.

Species *basothovii* Lephoto & Gray, 2019

Species *citri* Tabassum, Shahina, Nasira & Erum, 2016

299 Type genus is *Litoditis* Sudhaus 2011. Diagnostic features are: cheilstome normal; glottis present; strong median oesophageal bulb; and weak terminal bulb. Cheilstome prominent; glottis absent; median bulb absent; and terminal bulb weak in other subfamilies. Otherwise with the features of the family.

300 Type genus is *Oryctonema* Poinar 1970. Diagnostic features are: cheilstome normal; glottis absent; no median oesophageal bulb; and weak terminal bulb. Cheilstome prominent; glottis present; median bulb present; and terminal bulb strong in other subfamilies. Otherwise with the features of the family.

301 Type genus is *Oscheius* Andrassy 1976. Diagnostic feature is reflexed ovaries. Outstretched in other subfamilies. Otherwise with the features of the family.

302 Divided into the Dolichura group and the Insectivora group (Sudhaus 2011). Species in the Dolichura group generally have a slender body, peloderan bursa, inconspicuous posterior phasmids and spicules with straight tip (no distal hook), while species in the Insectivora group generally have a wide body with 4 to 6 incisions in the lateral fields, pseudopeloderan/leptoderan bursa, more conspicuous phasmids posterior to the last genital papillae and needle-like spicules with distal hooks (Kumar *et al.* 2019). Species identification of the genus is very challenging since morphological characters are very similar. Of the valid species, 32 belong to the Insectivora group and 15 to the Dolichura group (Tabassum *et al.* 2016), plus more recently described species.

Genus *Parapoteriostomum* Hartwich, 1986 (7 species)

307 There is little doubt that Strongyloidea are phylogenetically derived from an ancestor classified as Rhabditina. However, there has been extensive radiation within the group leading to a very large number of species and lineages, and hence taxa of a number of different ranks. The result has been classifications with ranks extending as high as Order level (Strongylida) to accommodate this substantial diversity (Durette-Desset & Chabaud 1993, Durette-Desset *et al.* 2017). Others have accommodated the diversity within lower taxonomic ranks, such as within a superfamily (Gibbons 2010). Within these different classification schemes various sub-groups have been defined, and although there is some disagreement over the ranks of these taxa, there is broad agreement among taxonomists working on the group of a considerable hierarchy of names within a classification including a substantial number of ranks. There is, however, an issue with fitting this classification within that of the broader scheme of Phylum Nematoda because those studying the group are, by and large, different to those studying the larger group from which they evolved, the Rhabditina. Strongyles are internal parasites of vertebrates (“helminths”) studied by different methods and with mostly different taxonomically-informative attributes to their presumed progenitors the rhabditids, many of which are free living. The result is a serious mis-match of ranks in the respective classifications such that the accepted evolution of the various groups is not reflected in the taxon ranks afforded groups in the different schemes. For example, the Order Strongylida is a clade within suborder Rhabditina. As raising the rank of Rhabditina to ensure that the classification reflects evolution would result in changes to many other accepted higher taxonomic names in a substantial portion of the Phylum, the ranks of many helminths is lower than in many of the classifications proposed for them in the absence of the wider context of Phylum Nematoda as a whole. There is no satisfactory resolution to this issue other than a classification eschewing ranks altogether to accommodate the large diversity of nematodes. Although such schemes have been proposed (Sudhaus 2011), there is still debate over their utility and how they should operate, and so a more traditional approach using taxonomic ranks to indicate the size and inclusivity of the various clades within Nematoda has been adopted. Because other than nominotypical tribes and subtribe ranks are used within Strongyloidea to accommodate and reflect the clades identified within the superfamily but are not so used in other superfamilies, the counts within Strongyloidea only include the ranks of tribes and subtribes.

308 The authorities of supra-generic taxa in this group have been discussed extensively (Dougherty 1944).

309 Originally created as tribe Deletrocephalinea by Railliet & Henry (1912), and also raised to family Deletrocephalidae by M.B. Chitwood (1969).

310 First used as a subfamily by Railliet (1885).

 Genus *Diaphanocephalus* Diesing, 1851 (1 species)
 Genus *Kalicephalus* Molin, 1861 (40 species)
 Subgenus *Inermiformis* Schad, 1962 (2 species)
 Subgenus *Kalicephaloides* Yeh, 1956 (1 species)
 Subgenus *Kalicephalus* Molin, 1861 (33 species)
 Subgenus *Occipitodontus* Ortlepp, 1923 (1 species)
 Subgenus *Rectiphiloides* Schad, 1962 (2 species)
 Subgenus *Variabiliformis* Schad, 1962 (1 species)

Family **Metastrongylidae** Molin, 1861 (8 subfamilies, 10 tribes, 10 subtribes, 65 genera, 311 species)³⁵¹
 Subfamily **Angiostrongylinae** Boehm & Gebauer, 1934 (1 tribe, 1 subtribe, 23 genera, 85 species)³⁵²
 Tribe **Angiostrongylini** Boehm & Gebauer, 1934 * (1 subtribe, 23 genera, 85 species)
 Subtribe **Angiostrongylinii** Boehm & Gebauer, 1934 * (23 genera, 85 species)
 Genus *Aelurostrongylus* Cameron, 1927 (6 species)
 Subgenus *Aelurostrongylus* Cameron, 1927 (4 species)
 Subgenus *Perostrongylus* Schlegel, 1933 (2 species)
 Genus *Andersonstrongylus* Webster, 1978 (2 species)
 Genus *Angiostrongylus* Kamensky, 1905 (24 species)³⁵³
 Genus *Antechinostrongylus* Spratt, 1981 (1 species)
 Genus *Cercogylus* Petter & Brochier, 1989 (1 species)
 Genus *Cosmostrongylus* Spratt, 1984 (1 species)
 Genus *Didelphostrongylus* Prestwood, 1976 (1 species)
 Genus *Filostrongylus* Mackerras, 1955 (2 species)
 Genus *Gallegostrongylus* Mas-Coma, 1978 (4 species)³⁵⁴
 Genus *Gurltia* Wolffhügel, 1933 (1 species)
 Genus *Heterostrongylus* Travassos, 1925 (1 species)
 Genus *Madafilaroides* Chabaud & Brygoo, 1960 (1 species)

348 Originally created as tribe Acheilostominea by Lichtenfels (1980).

349 Originally created as tribe Bunostominea by Railliet & Henry (1909).

350 Created as a family by Travassos (1920).

351 Created as a subfamily with the current spelling by Leiper (1908), but already defined earlier as family “Metastrongylida” by Molin (1861). Superfamily Metastrongyloidea defined by Lane (1917). For full history, see Cowie (2019)..

352 Raised to family by Anderson (1978).

353 Classification follows Cowie (2019), which does not recognize the type subgenus *Angiostrongylus* Kamensky 1905 or *Parastromyulus* Baylis 1928. Census includes 3 species regarded as probably valid by Cowie (2019), 1 of which is of uncertain genus placement, and 2 of which have proposed type specimens recorded and in a recognized collection but currently lack published descriptions.

354 Classification follows Cowie (2019).

- Genus *Madangiostrongylus* Chabaud & Brygoo, 1960 (1 species)
- Genus *Malayometastrongylus* Gibbons & Krishnasamy, 1986 (1 species)
- Genus *Marsupostrongylus* Mackerras & Sandars, 1933 (11 species)
- Genus *Procyonostrostrongylus* Anderson, Prestwood & Strelive, 1979 (1 species)
- Genus *Pulmostrongylus* Hsu, 1935 (3 species)
- Genus *Rodentocaulus* Schulz, Orlov & Kutass, 1938 (1 species)³⁵⁵
- Genus *Sobolevingylus* Romanov, 1952 (3 species)
- Genus *Stefanskostrostrongylus* Drozdz, 1970 (10 species)³⁵⁶
- Genus *Thaistrostrongylus* Ohbayashi, Kamiya & Bhaibulaya, 1979 (1 species)
- Genus *Trilobostrostrongylus* Anderson, 1963 (1 species)
- Genus *Viverrostrongylus* Asakawa, Ohbayashi & Ow-Yang, 1986 (1 species)
- Subfamily **Crenosomatinae** Schulz, 1951 (Popova, 1952) (1 tribe, 1 subtribe, 6 genera, 28 species)³⁵⁷
- Tribe **Crenosomatini** Schulz, 1951 * (1 subtribe, 6 genera, 28 species)
- Subtribe **Crenosomatinii** Schulz, 1951 * (6 genera, 28 species)
- Genus *Crenosoma* Molin, 1861 (16 species)
- Genus *Molinofilaria* Vuylstéke, 1956 (1 species)
- Genus *Otostrostrongylus* De-Bruyn, 1933 (2 species)
- Genus *Paracrenosoma* Yun & Kontrimavichus, 1963 (4 species)
- Genus *Prestwoodia* Anderson, 1978 (1 species)
- Genus *Troglostrostrongylus* Vevers, 1923 (4 species)
- Subfamily **Dictyocaulinae** Skryabin, 1933 * (1 tribe, 1 subtribe, 3 genera, 18 species)^{358 359}
- Tribe **Dictyocaulini** Skryabin, 1933 * (1 subtribe, 3 genera, 18 species)
- Subtribe **Dictyocaulinii** Skryabin, 1933 * (3 genera, 18 species)
- Genus *Bronchonema* Monnig, 1932 (1 species)
- Genus *Cardiostrostrongylus* Sakamoto & Malgor, 1995 (1 species)
- Genus *Dictyocaulus* Railliet & Henry, 1907 (16 species)
- Species *cervi* Pyziel, Laskowski, Demiaszkiewicz & Hoglund, 2017
- Subfamily **Filaroidinae** Schulz, 1951 (1 tribe, 1 subtribe, 6 genera, 35 species)
- Tribe **Filaroidini** Schulz, 1951 * (1 subtribe, 6 genera, 35 species)
- Subtribe **Filaroidinii** Schulz, 1951 * (6 genera, 35 species)
- Genus *Chabaudistrostrongylus* Kontrimavichus & Delyamure, 1979 (3 species)
- Genus *Filariopsis* Van-Thiel, 1926 (4 species)
- Genus *Filaroides* Van-Beneden, 1858 (13 species)
- Genus *Oslerus* Hall, 1921 (2 species)
- Subgenus *Anafilaroides* Gericher, 1948 (1 species)³⁶⁰
- Subgenus *Oslerus* Hall, 1921 (1 species)
- Genus *Parafilaroides* Dougherty, 1946 (11 species)
- Genus *Rauschivingylus* Kontrimavichus & Delyamure, 1979 (2 species)
- Subfamily **Metastrongylinae** Molin, 1861 (Leiper, 1908) (1 tribe, 1 subtribe, 4 genera, 11 species)³⁶¹
- Tribe **Metastrongylini** Molin, 1861 * (1 subtribe, 4 genera, 11 species)
- Subtribe **Metastrongylinii** Molin, 1861 * (4 genera, 11 species)
- Genus *Mariostrongylus* Teixeira-De-Freitas & Franco, 1967 (1 species)
- Genus *Metastrongylus* Molin, 1861 (7 species)
- Genus *Micronematomodum* Castelli, 1926 (1 species)

355 Classification follows Cowie (2019).

356 Classification follows Cowie (2019).

357 Originally created as a family by Schulz (1951).

358 Created as a family by Skryabin (1941).

359 Generally placed in the clade that is herein termed Trichstrongylidae (Durette-Desset & Chabaud 1981), but recent molecular evidence suggests affinities with the clade herein termed Metastrongylida (Beveridge pers. comm., on the basis of work by Neil Chilton).

360 Originally as genus, first used as subgenus by Anderson (1978).

361 Created as a subfamily by Leiper (1908) in ignorance of Molin's earlier (1861) designation as family "Metastrongylida".

Genus *Posthalocercus* Delyamure in Skryabin, 1942 (2 species)

Subfamily **Protostrongylinae** Leiper, 1926 * (1 tribe, 1 subtribe, 15 genera, 81 species)³⁶²

Tribe **Protostrongylini** Leiper, 1926 * (1 subtribe, 15 genera, 81 species)³⁶³

Subtribe **Protostrongylinii** Leiper, 1926 * (15 genera, 81 species)

Genus *Cystocaulus* Schulz, Orlov & Kutass, 1933 (4 species)

Genus *Dukerostrongylus* Dinnik & Boev, 1982 (1 species)

Genus *Elaphostrongylus* Cameron, 1931 (5 species)

Genus *Imparispiculus* Luo, Jianzhong, Duo, Jiecaidan & Chen-Gan, 1988 (1 species)

Genus *Muellerius* Cameron, 1927 (3 species)

Genus *Neostongylus* Gebauer, 1932 (2 species)

Genus *Orthostrongylus* Dougherty & Goble, 1946 (1 species)

Genus *Parelaphostrongylus* Boev & Schulz, 1950 (3 species)

Genus *Pneumocaulus* Schulz & Andreeva, 1948 (1 species)

Genus *Pneumostrongylus* Moennig, 1932 (3 species)

Genus *Protostrongylus* Kamensky, 1905 (37 species)

Subgenus *Davtianostongylus* Boev, 1950 (2 species)

Subgenus *Kochostongylus* Shultz & Boev in Skryabin, 1952 (2 species)

Subgenus *Protostrongylus* Kamensky, 1905 (19 species)

Subgenus *Pulmostongyles* Boev, 1984 (14 species)

Genus *Skrjabinocaulus* Boev & Sulimov, 1963 (1 species)

Genus *Spiculocaulus* Schulz, Orlov & Kutass, 1933 (4 species)

Genus *Umingmakstrongylus* Hoberg, Polley, Gunn & Nishi, 1995 (1 species)

Genus *Varestrongylus* Bhalerao, 1932 (14 species)

Species *alces* Demidova & Naumitscheva, 1953³⁶⁴

Species *eleguneniensis* Verocai, Kutz, Simard & Hoberg, 2015

Subfamily **Pseudaliinae** Railliet & Henry, 1909 (3 tribes, 3 subtribes, 7 genera, 46 species)³⁶⁵

Tribe **Halocercini** Delyamure, 1951 * (1 subtribe, 2 genera, 17 species)³⁶⁶

Subtribe **Halocercinii** Delyamure, 1951 * (2 genera, 17 species)

Genus *Halocercus* Baylis & Daubney, 1925 (14 species)

Genus *Skrjabinalius* Delyamure, 1942 (3 species)

Tribe **Pseudaliini** Railliet & Henry, 1909 * (1 subtribe, 1 genus, 3 species)

Subtribe **Pseudaliinii** Railliet & Henry, 1909 * (1 genus, 3 species)

Genus *Pseudalius* Dujardin, 1845 (3 species)

Tribe **Stenurini** Skryabin, 1942 * (1 subtribe, 4 genera, 26 species)³⁶⁷

Subtribe **Stenurinii** Skryabin, 1942 * (4 genera, 26 species)

Genus *Pharurus* R. Leuckart, 1848 (10 species)

Species cf *dalli* Colon-Llavina, Mattiucci, Nascetti, Harvey, Williams & Mignucci-Giannoni, 2019

Genus *Stenuroides* Gerichter, 1951 (1 species)

Genus *Stenurus* Dujardin, 1845 (13 species)

Species cf *minor* Colon-Llavina, Mattiucci, Nascetti, Harvey, Williams & Mignucci-Giannoni, 2019

Genus *Torynurus* Baylis & Daubney, 1925 (2 species)

362 Originally created as a family by Leiper (1926).

363 6 subfamilies were recognised in Protostrongylidae by Boev (1975), here corresponding to tribes, but they were not recognized by either Anderson (1978) or Gibbons (2010).

364 *Varestrongylus alces* is distinct on molecular and morphological evidence from *V. capreoli* (Verocai Hoberg Vikoren Handeland Ytrehus Rezansoff Davidson Gillean & Kutz, 2014).

365 Also family Pseudaliidae Railliet (1916).

366 Originally proposed as subfamily by Delamure (1951).

367 Originally proposed as subfamily by Skryabin (1942).

Subfamily **Skrjabingylinae** Skryabin, 1933 * (1 tribe, 1 subtribe, 1 genus, 7 species)³⁶⁸

Tribe **Skrjabingylini** Skryabin, 1933 * (1 subtribe, 1 genus, 7 species)

Subtribe **Skrjabingylinii** Skryabin, 1933 * (1 genus, 7 species)

Genus *Skrjabingylus* Petrov, 1927 (7 species)

Family **Trichostrongylidae** Leiper, 1908 (Leiper, 1912) (3 subfamilies, 15 tribes, 33 subtribes, 257 genera, 1626 species)^{369 370 371}

Subfamily **Trichostrongylinae** Leiper, 1908 (3 tribes, 8 subtribes, 56 genera, 428 species)

Tribe **Cooperiini** Skryabin & Schulz, 1937 (3 subtribes, 20 genera, 94 species)³⁷²

Subtribe **Cooperiinii** Skryabin & Schulz, 1937 * (10 genera, 60 species)

Genus *Chabaudstrongylus* Durette-Desset & Denke, 1978 (2 species)

Genus *Cooperia* Ransom, 1907 (33 species)

Genus *Gazellostrongylus* Yeh, 1956 (1 species)

Genus *Impalaia* Moennig, 1923 (4 species)

Genus *Megacooperia* Khalil & Gibbons, 1976 (1 species)

Genus *Minutostrongylus* Le-Roux, 1936 (1 species)

Genus *Neocooperia* Fotedar & Bambroo, 1971 (1 species)

Genus *Paracooperia* Travassos, 1935 (9 species)

Genus *Paracooperoides* Boomker, Horak & de Vos, 1981 (1 species)

Genus *Pseudostertagia* Orloff, 1933 (7 species)

Subtribe **Libyostrongylinii** Durette-Desset & Chabaud, 1977 * (5 genera, 20 species)³⁷³

Genus *Cnizostongylus* Chabaud, Durette-Desset & Houin, 1967 (1 species)

Genus *Laurostrongylus* Durette-Desset & Chabaud, 1992 (1 species)

Genus *Libyostongylus* Lane, 1923 (6 species)

Genus *Paralibyostongylus* Ortlepp, 1939 (5 species)

Genus *Pararhabdonema* Kreis, 1945 (7 species)

Subtribe **Obeliscoidinii** Durette-Desset, Hugot, Darlu & Chabaud, 1999 * (5 genera, 14 species)³⁷⁴

Genus *Biogastranema* Rohrbacher & Ehrenford, 1954 (1 species)

Genus *Hoazinstrongylus* Magalhaes, Pinto & Correa-Gomes, 1985 (1 species)

Genus *Obeliscoides* Grabyll, 1924 (4 species)

Genus *Tapironema* Durette-Desset, Chabaud & Sutton, 1997 (1 species)

Genus *Teporingonema* Harris, 1985 (7 species)

Tribe **Haemonchini** Skryabin & Shultz, 1937 * (2 subtribes, 14 genera, 193 species)³⁷⁵

Subtribe **Haemonchinii** Skryabin & Schulz, 1937 (5 genera, 30 species)

Genus *Ashworthius* Le-Roux, 1930 (9 species)

Genus *Boehmiella* Gebauer, 1932 (2 species)

Genus *Haemonchus* Cobb, 1898 (14 species)

Genus *Leiperiatus* Sandground, 1929 (1 species)

Genus *Mecistocirrus* Railliet & Henry, 1912a (4 species)

Subtribe **Ostertaginii** Skryabin & Schulz, 1937 * (9 genera, 163 species)^{376 377}

Genus *Camelostrongylus* Orloff, 1933 (20 species)

Genus *Graphidium* Railliet & Henry, 1909 (1 species)

368 Originally proposed as family by Skryabin (1933).

369 Attributed also to Witenberg (1925) by De Ley & Blaxter (2002).

370 Classification follows Beveridge *et al.* (2014) and Durette Dessel *et al.* (1999) except generally 1 full taxonomic rank lower.

371 Ichthyostongylidae Yamaguti 1961 of doubtful validity as a group and included here (Beveridge *et al.* 2010).

372 Created as a subfamily by Skryabin & Schikhobalova (1952).

373 Created as a tribe by Durette-Desset & Chabaud (1977).

374 Created as a subfamily by Durette-Desset *et al.* (1999).

375 Created as a subfamily by Skryabin & Schultz (1952).

376 Includes the former Graphidiinae Travassos 1937, see Durette-Desset *et al.* (1999).

377 Raised to subfamily by Lopez-Neyra 1947. Originally created as a tribe by Skryabin & Shultz 1937.

- Genus *Hyostrongylus* Hall, 1921 (7 species)
- Genus *Longistrongylus* Le-Roux, 1931 (9 species)
- Genus *Marshallagia* Orloff, 1933 (23 species)
- Genus *Ostertagia* Ransom, 1907 (53 species)
- Genus *Parostertagia* Schwartz & Alicata, 1933 (1 species)
- Genus *Spiculopteragia* Orloff, 1933 (24 species)
- Genus *Teladorsagia* Andreeva & Satubaldin, 1954 (25 species)
- Tribe **Trichostrongylini** Leiper, 1908 * (3 subtribes, 22 genera, 141 species)
- Subtribe **Amidostomatini** Travassos, 1919 * (8 genera, 50 species)^{378 379}
- Genus *Amidostomoides* Petrova, 1987 (15 species)
- Species *acutum* (Lundahl, 1848) Lomakin, 1991³⁸⁰
- Species *monodon* (Linstow, 1882) Lomakin, 1991
- Species *petrovi* (Shakhtahtinskaya, 1956) Lomakin, 1991
- Genus *Amidostomum* Railliet & Henry, 1909 (7 species)
- Genus *Epomidiostomum* Skryabin, 1915 (15 species)
- Genus *Hexapapillostomum* Lomakin, 1991 (1 species)
- Genus *Mesamidostomum* Lomakin, 1991 (2 species)
- Genus *Paramidostomum* Freitas & Mendonca, 1950 (1 species)
- Genus *Pseudamidostomum* Boulenger, 1926 (4 species)
- Genus *Quasiamidostomum* Lomakin, 1991 (5 species)
- Subtribe **Filarinematinii** Skryabin & Schikhobalova, 1937 * (3 genera, 19 species)³⁸¹
- Genus *Filarinema* Moennig, 1929 (13 species)
- Species *chiltoni* Beveridge, 2019
- Genus *Peramelistrongylus* Mawson, 1960 (1 species)
- Genus *Profilarinema* Durette-Desset & Beveridge, 1981 (5 species)
- Subtribe **Trichostrongylini** Leiper, 1908 * (11 genera, 72 species)
- Genus *Arnfieldia* Sarwar, 1957 (1 species)
- Genus *Graphidioides* Cameron, 1923 (9 species)
- Genus *Graphinema* Guerrero & Rojas, 1969 (1 species)
- Genus *Lagostonema* Sutton & Durette-Desset, 1987 (1 species)
- Genus *Linustrongylus* Vaucher & Durette-Desset, 1986 (1 species)
- Genus *Mainspinostrongylus* Kalyankar & Palladwar, 1989 (1 species)
- Genus *Schikhobalovia* Ali & Deshpande, 1969 (1 species)
- Genus *Travassosius* Khalil, 1922 (2 species)
- Genus *Trichostrongyella* Dikov, 1961 (1 species)
- Genus *Trichostrongylus* Looss, 1905 (53 species)
- Genus *Websternema* Vaucher & Durette-Desset, 1986 (1 species)
- Subfamily **Heligmosominae** Travassos, 1914 (8 tribes, 15 subtribes, 127 genera, 782 species)³⁸²
- Tribe **Cylicostrongylini** Yamaguti, 1961 * (1 subtribe, 1 genus, 3 species)³⁸³
- Subtribe **Cylicostrongylini** Yamaguti, 1961 *
- Genus *Neocylicostrongylus* Arya & Johnson, 1977 (3 species)³⁸⁴
- Tribe **Heligmosomini** Travassos, 1914 (1 subtribe, 11 genera, 159 species)
- Subtribe **Heligmosomini** Travassos, 1914 * (11 genera, 159 species)

378 Created as a subfamily by Travassos (1919) and family by Baylis & Daubney (1926)

379 There is evidence for 2 clades within the tribe Amidostomatini (labelled as subfamilies Amidostomatinae and Epomidiostomatinae within a family Amidostomatidae by Durette-Desset & Chabaud (1981)). These are given no formal designation in the present classification.

380 Not synonyms of *Amidostomum acutum* (Lundahl 1848) Lomakin, 1991 on molecular evidence (Kavetska *et al.* 2015).

381 Created as a tribe by Skryabin & Schikhobalova (1937).

382 Raised to family by Cramm (1927).

383 Created as a family by Yamaguti (1961).

384 Placed in Camallanidae by Spencer-Jones & Gibson (1987), but as a separate family Cylicostrongylidae Yamaguti 1961 by Gibbons (2010).

Genus *Citellinema* Hall, 1916 (7 species)
 Genus *Citellinoides* Dikmans, 1939 (1 species)
 Genus *Dessetia* Genov & Janchev, 1981 (1 species)
 Genus *Heligmodentostoma* Skryabin & Schulz, 1952 (1 species)
 Genus *Heligmoptera* Nadtochiy, 1977 (4 species)
 Genus *Heligmosomoides* Hall, 1916 (36 species)
 Species *americanus* Durette-Desset Kinsella & Forester, 1972³⁸⁵
 Species *polygyrus* (Dujardin, 1845) Boulenger, 1922³⁸⁶
 Genus *Heligmosomum* Railliet & Henry, 1909 (28 species)
 Subgenus *Heligmosomum* Railliet & Henry, 1909 (19 species)
 Subgenus *Paraheligmosomum* Asakawa & Satoh, 1987 (9 species)
 Genus *Longistriata* Schulz, 1926 (71 species)
 Genus *Ischilinema* Carolina-Serrano & Digiani, 2016 (1 species)
 Species *baldoi* Carolina-Serrano & Digiani, 2016
 Genus *Ohbayashinema* Durette-Desset, 1974 (5 species)
 Genus *Suncinema* Durette-Desset, 1974 (4 species)
 Tribe **Heligmonellini** Skryabin & Schikhobalova, 1952 (5 subtribes, 80 genera, 455 species)^{387, 388}
 Subtribe **Heligmonellini** Skryabin & Schikhobalova, 1952 * (41 genera, 178 species)
 Genus *Alippistrongylus* Celina-Digiani & Kinsella, 2014 (1 species)
 Species *bicaudatus* Celina-Digiani & Kinsella, 2014
 Genus *Asakawanema* Durette-Desset & Digiani, 2019 (1 species)
 Species *siamense* (Asakawa Kamiya & Ohbayashi, 1986) Durette-Desset & Digiani, 2019
 syn *Yatinema siamensis* Asakawa Kamiya & Ohbayashi, 1986
 Genus *Bunomystrongylus* Hasegawa & Mangali, 1996 (4 species)
 Species *Ilami* Smales, 2015
 Genus *Chisholmia* Durette-Desset & Digiani, 2015 (4 species)
 Species *bainae* (Beveridge & Durette-Desset, 1992) Durette-Desset & Digiani, 2015
 Species *mawsonae* (Durette-Desset, 1969) Durette-Desset & Digiani, 2015
 syn *Odilia mawsonae* Durette-Desset, 1969
 Genus *Equilophos* Durette-Desset & Digiani, 2015 (4 species)
 Species *polyrhabdote* (Mawson, 1961) Durette-Desset & Digiani, 2015
 syn *Odilia polyrhabdote* (Mawson, 1961) Durette-Desset, 1973
 Species *similis* (Smales, 2009) Durette-Desset & Digiani, 2015
 syn *Odilia similis* Smales, 2009
 Genus *Flannerystrongylus* Smales, 2019 (1 species)
 Species *abulus* Smales, 2019
 Genus *Fukumotonema* Durette-Desset & Digiani, 2019 (6 species)
 Species *orientale* (Asakawa, Kamiya & Ohbayashi, 1986) Durette-Desset & Digiani, 2019
 syn *Neoheligmonella orientalis* Asakawa, Kamiya & Ohbayashi, 1986
 Species *deborahae* Durette-Desset & Digiani, 2019
 syn *Yatinema japonicum* sensu Asakawa, 1989 nec Asakawa & Ohbayashi, 1986
 Species *myodesi* (Asakawa, 1989) Durette-Desset & Digiani, 2019
 syn *Morganiella myodesi* sensu Asakawa, 1989 nec Yin & Zhang, 1981

385 Not a subspecies of *H. polygyrus* (Harris *et al.* 2015).

386 See Behnke & Harris (2010) for a discussion of the identity and nomenclature of species *Heligmosomoides bakeri* and *Heligmosomoides polygyrus*, and the former name *Nematospirodes dubium* Baylis 1926. *Heligmosomoides polygyrus* is used widely as a laboratory model for intestinal helminth infection and its interaction with host immune systems.

387 Included here following Beveridge *et al.* (2014).

388 Created as a subfamily by Durette-Desset & Chabaud (1977).

- Genus *Guerrerostrongylus* Sutton & Durette-Desset, 1991 (4 species)
 Species *marginalis* Weirich Catzeflis & Jimenez, 2016
- Genus *Hasegawanema* Durette-Desset & Digiani, 2015 (10 species)
 Species *mamasaense* (Hasegawa, Miyata & Syafruddin, 1999) Durette-Desset & Digiani, 2015
 Species *mallomyos* (Hasegawa & Syafruddin, 1994) Durette-Desset & Digiani, 2015
 syn *Odilia mallomyos* Hasegawa & Syafruddin, 1994
 Species *maxomyos* (Hasegawa, Miyata & Syafruddin, 1999) Durette-Desset & Digiani, 2015
 syn *Odilia maxomyos* Hasegawa, Miyata & Syafruddin, 1999
 Species *moatensis* (Hasegawa, Miyata & Syafruddin, 1999) Durette-Desset & Digiani, 2015
 syn *Odilia moatense* Hasegawa, Miyata & Syafruddin, 1999
 Species *yumense* Smales, 2019
- Genus *Hasanuddinia* Hasegawa & Syafruddi, 1994 (5 species)
 Species *pogonomyos* Smales, 2014
 Species *hasegawai* Smales, 2015
- Genus *Heligmonella* Moennig, 1927 (4 species)³⁸⁹
 Genus *Hughjonestrongylus* Digiani & Durette-Desset, 2014 (20 species)
 Species *amplicaudae* (Smales & Heinrich, 2010) Celina-Digiani & Durette-Desset, 2014
 syn *Paraheligmonelloides amplicaudae* Smales & Heinrich, 2010 (Celina-Digiani & Durette-Desset, 2014)
 Species *ennisae* (Smales & Heinrich, 2010) Durette-Desset & Digiani, 2015
 syn *Paraheligmonelloides ennisae* Smales & Heinrich, 2010 (Durette-Desset & Digiani, 2015)
 Species *implexa* (Smales, 2008) Durette-Desset & Digiani, 2015
 syn *Odilia implexa* Smales, 2008
 Species *mirzai* (Smales, 2009) Celina-Digiani & Durette-Desset, 2014
 syn *Heligmonoides mirzai* Smales, 2009 (Celina-Digiani & Durette-Desset, 2014)
 Species *singauwaensis* (Smales, 2009) Celina-Digiani & Durette-Desset, 2014
 syn *Paraheligmonelloides singauwaensis* Smales, 2009 (Celina-Digiani & Durette-Desset, 2014)
 Species *pervulgatus* Smales, 2019
 Species *vaniensis* Smales, 2019
 Species *wanumaensis* Smales, 2019
 Species *woolloiae* Smales, 2017
 Species sp. (Smales, 2011) Digiani & Durette-Desset, 2014
 syn *Paraheligmonelloides* sp. Smales, 2011 (Digiani & Durette-Desset, 2014)
- Genus *Krishnasamyos* Celina-Digiani & Durette-Desset, 2014 (1 species)
 Species *triangulus* (Ow-Yang, Durette-Desset & Ohbayashi, 1983) Celina-Digiani & Durette-Desset, 2014
 syn *trianglus* Ow-Yang, Durette-Desset & Ohbayashi, 1983 (Celina-Digiani & Durette-Desset, 2014)
- Genus *Lagostrongylus* Fukumoto, Kamiya & Ohbayashi, 1986 (3 species)
 Genus *Lesleyella* Durette-Desset & Digiani, 2015 (1 species)
 Species *wauensis* (Smales, 2010) Durette-Desset & Digiani, 2015
- Genus *Macrostrongylus* Ow-Yang, Durette-Desset & Ohbayashi, 1983 (3 species)
 Species *ingens* Smales, 2008
- Genus *Malaistrongylus* Ow-Yang, Durette-Desset & Ohbayashi, 1983 (1 species)

389 Species number according to Durette-Desset et al. (2017).

- Genus *Mawsonema* Smales & Heinrich, 2010 (3 species)
 Species *mokwanensis* Smales & Heinrich, 2010
 Genus *Maxomystrongylus* Hasegawa & Syafruddi, 1997 (2 species)
 Genus *Mikenema* Durette-Desset, Digiani, Kilani & Geffard -Kuriyama, 2017 (7 species)
 Species *kinsellai* (Digiani, Carrena & Durette-Desset, 2009) Durette-Desset,
 Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Paraheligonella kinsellai* Digiani, Carrena & Durette-Desset, 2009 (Durette-
 Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species *lamothei* (Digiani, Carrena & Durette-Desset, 2009) Durette-Desset,
 Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Paraheligonella lamothei* Digiani, Carrena & Durette-Desset, 2009 (Durette-
 Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species *perfida* (Travassos, 1943) Durette-Desset, Digiani, Kilani & Geffard-
 Kuriyama, 2017
 Syn *Longistriata perfida* Travassos, 1943 (Durette-Desset, Digiani, Kilani &
 Geffard-Kuriyama, 2017)
 Species *romerolagi* (Gibbons & Kumar, 1980) Durette-Desset, Digiani, Kilani &
 Geffard-Kuriyama, 2017
 Syn *Boreostrongylus romerolagi* Gibbons & Kumar, 1980 (Durette-Desset, Digiani,
 Kilani & Geffard-Kuriyama, 2017)
 Genus *Melomystrongylus* Smales, 2009 (5 species)
 Species *sepikensis* Smales, 2009
 Species *somoroensis* Smales & Heinrich, 2010
 Genus *Montistrongylus* Smales & Heinrich, 2010 (4 species)
 Species *ingati* Smales & Heinrich, 2010
 Species *kaindiensis* Smales, 2015
 Genus *Nugininema* Smales, 2016 (1 species)
 Species *titokis* Smales, 2016
 Genus *Odilia* Durette-Desset, 1973 (35 species)
 Species *brachybursa* (Mawson, 1961) Durette-Desset, 1973
 Species *carinatae* Smales, 2008
 Species *emanuelae* (Mawson, 1961) Durette-Desset, 1973
 Species *hageinannae* Smales, 2016
 Species *helgeni* Smales, 2015
 Species *mackerrasae* (Mawson, 1961) Durette-Desset, 1973
 Species *melomyos* (Mawson, 1961) Durette-Desset, 1973
 Species *tasmaniensis* Gibbons & Spratt, 1995
 Species *uromyos* (Mawson, 1961) Durette-Desset, 1973
 Species *whittingtoni* Smales, 2015
 Genus *Paraheligonella* Durette-Desset, 1971 (1 species)
 Genus *Paraheligonelloides* Fukumoto, Kamiya & Suzuki, 1980 (8 species)
 Species *amplicaudae* Smales & Heinrich, 2010
 Species *ennisae* Smales & Heinrich, 2010
 Species *kenyensis* Fukumoto, Kamiya & Suzuki, 1980
 Species *singauwaensis* Smales, 2009
 Genus *Parasabanema* Smales & Heinrich, 2010 (4 species)
 Species *szalayi* Smales & Heinrich, 2010
 Species *praeputialis* (Gibbons & Spratt, 1995) Durette-Desset & Digiani, 2015
 syn *Odilia praeputialis* Gibbons & Spratt, 1995
 Genus *Parvinema* Smales, 2017 (4 species)
 Species *bafunminensis* Smales, 2017
 Species *helgeni* Smales, 2017

Genus *Pogonomystongylus* Smales, 2014 (3 species)
 Species *domaensis* Smales, 2014
 Genus *Rattustrongylus* Ow-Yang, Durette-Desset & Ohbayashi, 1983 (2 species)
 Genus *Rodentanema* Smales, 2016 (1 species)
 Species *aenigma* Smales, 2016
 Genus *Sabanema* Ow-Yang, Durette-Desset & Ohbayashi, 1983 (5 species)
 Genus *Sanduanensis* Durette-Desset & Digiani, 2015 (2 species)
 Species *dividua* (Smales, 2010) Durette-Desset & Digiani, 2015
 syn *Odilia dividua* Smales, 2010
 Genus *Sciuricola* Durette-Desset, 1983 (2 species)
 Genus *Spalacina* Biserkov Durette-Desset & Genov, 1995 (3 species)
 Genus *Syafruddinema* Celina-Digiani & Durette-Desset, 2014 (6 species)
 Species *annandalei* (Ow-Yang, Durette-Desset & Ohbayashi, 1983) Celina-Digiani & Durette-Desset, 2014
 syn *Paraheligonelloides annandalei* (Ow-Yang, Durette-Desset & Ohbayashi, 1983) Celina-Digiani & Durette-Desset, 2014
 Species *eropeplios* (Hasegawa, Miyata & Syafruddin1999) Celina-Digiani & Durette-Desset, 2014
 syn *Paraheligonelloides eropeplios* (Hasegawa, Miyata & Syafruddin1999) Celina-Digiani & Durette-Desset, 2014
 Species *paruromyos* (Hasegawa, Miyata & Syafruddin1999) Celina-Digiani & Durette-Desset, 2014
 syn *Paraheligonelloides paruromyos* (Hasegawa, Miyata & Syafruddin1999) Celina-Digiani & Durette-Desset, 2014
 Genus *Trichofreitasia* Sutton & Durette-Desset, 1991 (1 species)
 Genus *Trichotravassosia* Lent & Freitas, 1938 (1 species)
 Genus *Viguerastrongylus* Durette-Desset, Digiani, Kilani & Geffard -Kuriyama, 2017 (1 species)
 Species *cubaensis* (Perez-Vigueras, 1943) Durette-Desset, Digiani, Kilani & Geffard -Kuriyama, 2017
 Syn *Paraheligonella cubaensis* Perez-Vigueras, 1943 (Durette-Desset, Digiani, Kilani & Geffard -Kuriyama, 2017)
 Genus *Xericola* Durette-Desset, 1974 (1 species)
 Genus *Yatinema* Asakawa & Ohbayashi, 1986 (3 species)
 Species *niigataee* Durette-Desset & Digiani, 2019
 syn *japonicum* sensu Asakawa & Ohbayashi, 1986 partim
 Subtribe **Pudicinii** Skryabin & Schikhobalova, 1952 * (10 genera, 55 species)³⁹⁰
 Genus *Acanthostrongylus* Travassos, 1937 (3 species)
 Species *secundus* Guerrero, 2019
 Genus *Durettestrongylus* Guerrero, 1983 (4 species)³⁹¹
 Genus *Freitasstrongylus* Goncalves, Pinto & Durett-Desset, 2007 (1 species)
 Genus *Fuellebornema* Travassos & Darriba, 1929 (7 species)³⁹²
 Genus *Heligmostrongylus* Travassos, 1917 (9 species)³⁹³
 Genus *Justinema* R'kha & Durette-Desset, 1991 (3 species)
 Genus *Pseudoheligmosomum* Travassos, 1937 (1 species)

390 Created as a subfamily by Durette-Desset (1971) and as a tribe by Skryabin & Schikhobalova (1952).

391 Including 2 species regarded as of uncertain affinities according to Durette-Desset *et al.* (2017).

392 Including a species originally designated as *Heligmosomum agoutii* Neiva Cunha & Travassos 1914 and transferred to the new genus *Fuellebornema* by Travassos & Darriba (1929) in the sense of Travassos 1937 partim, which was formally described as *Fuellebornema neivai* Cassone & Durette-Desset 1991. This species was regarded as *Fuelleborna* sp. and the formal name was not accepted by Durette-Desset *et al.* (2017).

393 Species according to Durette-Desset *et al.* (2017).

Genus *Pudica* Travassos & Darriba, 1929 (19 species)
 Species *cattani* Digiani, Landaeta-Aqueveque, Carolina-Serrano & Notanicola, 2017
 Species *degusi* (Babero & Cattan, 1975) Digiani, Landaeta-Aqueveque, Carolina-Serrano & Notanicola, 2017
 syn *Longistriata degusi* Babero & Cattan, 1975 (Digiani, Landaeta-Aqueveque, Carolina-Serrano & Notanicola, 2017)
 Species *minima* Serrano, Durette-Desset & Digiani, 2019
 Genus *Sciurodendrium* Durette-Desset, 1971 (7 species)³⁹⁴
 Genus *Squamasnema* Cordeiro, De-Vasconcelos-Melo, Furtado, Giese, Maldonado & Dos-Santos, 2015 (1 species)
 Species *amazonica* Cordeiro, De-Vasconcelos-Melo, Furtado, Giese, Maldonado & Dos-Santos, 2015
 Subtribe **Brevistriatinii** Durette-Desset, 1971 * (10 genera, 69 species)³⁹⁵
 Genus *Brevistriata* Travassos, 1937 (5 species)³⁹⁶
 Genus *Calypsostrongylus* Schmidt in Schmidt, Myers & Kuntz, 1967 (3 species)³⁹⁷
 Genus *Cordicauda* Durette-Desset, 1971 (12 species)³⁹⁸
 Genus *Doanhnema* Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017 (12 species)
 Species *longipene* (Durette-Desset & Chabaud, 1967) Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Brevistriata longipene* Durette-Desset & Chabaud, 1967 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species *malayense* (Durette-Desset, 1976) Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Calypsostrongylus malayense* Durette-Desset, 1976 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species *nepalese* (Durette-Desset, 1974) Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Brevistriata nepalense* Durette-Desset, 1974 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species *ogdeni* (Durette-Desset, 1969) Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Brevistriata ogdeni* Durette-Desset, 1969 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species “sp.” Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Brevistriata skrjabini* Schulz & Lubimov, 1932 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species *titasuthi* (Kliks & Durette-Desset, 1976) Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Calypsostrongylus titasuthi* Kliks & Durette-Desset, 1976 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)

394 Species according to Durette-Desset *et al.* (2017).

395 Created as a subfamily by Durette-Desset (1971).

396 Including *Brevistriata callosciuri* sensu Matsudate *et al.*, 2003 nec Wang 1981, which is regarded as uncertain by Durette-Desset *et al.* (2017).

397 Including a species originally designated as *Brevistriata skrjabini* Schulz & Lubimov 1932, which was informally described as *Calypsostrongylus* sp. and the previous formal name was not accepted but a new combination was formally proposed by Durette-Desset *et al.* (2017). Also including *Calypsostrongylus critatus* (Gedoelst 1917) Durette-Desset 1976, which is of uncertain placement according to Durette-Desset *et al.* (2017).

398 Species according to Durette-Desset *et al.* (2017).

Genus *Fissicauda* Durette-Desset & Krishnasamy, 1976 (7 species)³⁹⁹
 Genus *Glistrongylus* Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017 (1 species)
 Species *gracilis* (Leuckart, 1842) Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *Strongylus gracilis* Leuckart, 1842 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Genus *Kuala* Durette-Desset & Krishnasamy, 1976 (2 species)⁴⁰⁰
 Genus *Paraheligmonina* Ortlepp, 1939 (20 species)⁴⁰¹
 Genus *Quentinstrongylus* Durette-Desset, 1969 (1 species)
 Genus *Srivastavanema* Singh, 1962 (6 species)⁴⁰²
 Subtribe **Nippostrongylinii** Durette-Desset, 1971 * (16 genera, 132 species)⁴⁰³
 Genus *Carolinensis* Travassos, 1937 (7 species)
 Genus *Euzetoda* Elias & Durette-Desset, 2003 (1 species)
 Genus *Gobindonema* Sood & Parshad, 1974 (1 species)
 Genus *Hassalstrongylus* Durette-Desset, 1971 (19 species)
 Species *luquei* Costa, Maldonado-Junior, Boia, Lucio & Simoes, 2014
 Genus *Heligmonina* Baylis, 1928 (20 species)
 Genus *Heligmonoides* Baylis, 1928 (13 species)
 Genus *Hypocristata* Durette-Desset, 1971 (3 species)
 Genus *Malvinema* Digiani, Sutton & Durette-Desset, 2003 (4 species)
 Genus *Mammanidula* Sadovskaja, 1952 (3 species)
 Genus *Metheligmonella* Durette-Desset, 1971 (2 species)
 Genus *Missimstrongylus* Smales, 2018 (1 species)
 Species *oweni* Smales, 2018
 Genus *Neoheligmonella* Durette-Desset, 1971 (15 species)
 Genus *Nippostrongylus* Lane, 1923 (8 species)
 Species *smalesae* Hasegawa, Dewi, Fitriana & Asakawa, 2017
 Genus *Orientostrongylus* Durette-Desset, 1971 (6 species)
 Genus *Stilestrongylus* Freitas, Lent & Almeida, 1937 (26 species)
 Species *kaaguyporai* Panisse & Digiani, 2018
 Species *rolandoi* Boullosa, Simoes, Andrade-Silva, Gentile & Maldonado, 2019
 Genus *Suttonema* Digiani & Durette-Desset, 2003 (3 species)
 Subtribe **Tricholinsowinii** Durette-Desset, Kilani & Geffard-Kuriyama, 2017 * (2 genera, 15 species)⁴⁰⁴
 Genus *Moguranema* Yamaguti, 1941 (3 species)
 Species "sp." Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *nipponicum* sensu Yokohata, Abe & Kamiya, 1988 nec Yamaguti, 1941
 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Genus *Tricholinstowia* Travassos, 1937 (12 species)
 Species "sp. 1" Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *talpae* sensu Yokohata, Abe, Jiang & Kamiya, 1989 nec Morgan, 1928
 (Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017)
 Species "sp. 2" Durette-Desset, Digiani, Kilani & Geffard-Kuriyama, 2017
 Syn *talpae* sensu Sakata & Asakawa, 2003 nec Morgan, 1928 (Durette-Desset,

399 Including 2 species originally designated as *Brevistriata sundasiuri* Schmidt Myers & Kunz 1967, and formally described as such, but which was changed to the combination *Fissicauda sundasiuri* (Schmidt Myers & Kunz 1967) Durette-Desset 1976, and part of which was then designated as "sp. 1" and part as "sp.2" by Durette-Desset *et al.* (2017).

400 Species according to Durette-Desset *et al.* (2017).

401 Species according to Durette-Desset *et al.* (2017).

402 Species according to Durette-Desset *et al.* (2017).

403 Created as a subfamily by Durette-Desset (1971).

404 Created as a subfamily by Durette-Desset *et al.* (2017).

Digiani, Kilani & Geffard-Kuriyama, 2017)

Tribe **Herpetostrongylini** Skryabin & Schulz, 1937 * (2 subtribes, 11 genera, 54 species)^{405 406}

Subtribe **Globocephaloidinii** Inglis, 1968 * (2 genera, 4 species)⁴⁰⁷

Genus *Amphicephalooides* Beveridge, 1979 (1 species)

Genus *Globocephalooides* Yorke & Maplestone, 1926 (3 species)

Subtribe **Herpetostrongylini** Skryabin & Schulz, 1937 * (9 genera, 50 species)⁴⁰⁸

Genus *Austrostrongylus* Chandler, 1924 (13 species)

Genus *Beveridgiella* Humphery-Smith, 1981 (4 species)

Genus *Dessetostrongylus* Humphery-Smith, 1981 (3 species)

Genus *Herpetostrongylus* Baylis, 1931 (4 species)

Species *paramelomysi* Smales & Heinrich, 2010

Genus *Nasistongylus* Durette-Desset & Beveridge, 1982 (1 species)

Genus *Paraustrostrongylus* Mawson, 1973 (6 species)

Genus *Patriciaalina* Inglis, 1968 (6 species)

Genus *Vaucherius* Durette-Desset, 1980 (3 species)

Genus *Woolleya* Mawson, 1973 (10 species)

Tribe **Ichthyostongylini** Yamaguti, 1961 * (1 subtribe, 2 genera, 5 species)⁴⁰⁹

Subtribe **Ichthyostongylini** Yamaguti, 1961 * (2 genera, 5 species)

Genus *Ichthyostongylus* Mawson, 1954 (2 species)

Genus *Neoichthyostongylus* Naqvi & Gupta, 1987 (3 species)

Tribe **Nicollinini** Skryabin & Shultz, 1937 (1 subtribe, 2 genera, 10 species)^{410 411}

Subtribe **Nicollinini** Skryabin & Schulz, 1937 * (2 genera, 10 species)

Genus *Copemania* Durette-Desset & Beveridge, 1981 (1 species)

Genus *Nicollina* Baylis, 1930 (9 species)

Tribe **Ornithostongylini** Travassos, 1937 * (2 subtribes, 11 genera, 43 species)⁴¹²

Subtribe **Inglaminii** Durette-Desset, Denke & Murua * (1 genus, 2 species)⁴¹³

Genus *Inglamidum* Durette-Desset, Denke & Murua, 1976 (2 species)

Subtribe **Ornithostongylini** Travassos, 1937 * (10 genera, 41 species)⁴¹⁴

Genus *Allintoshius* Chitwood, 1937 (8 species)

Genus *Columbostrongylus* Puyleart, 1968 (1 species)

Genus *Lutznema* Lent & Freitas, 1934 (1 species)

Genus *Ornithonema* Travassos, 1935 (1 species)

Genus *Ornithostongylus* Travassos, 1914 (10 species)

Genus *Oswaldostrongylus* Lent & Freitas, 1934 (2 species)

Genus *Passeristongylus* Jansen, 1985 (1 species)

Genus *Sutarostrongylus* Beveridge & Durette-Desset, 1986 (2 species)

Genus *Vexillata* Travassos, 1937 (11 species)

Genus *Wanaristongylus* Jones, 1987 (4 species)

Tribe **Viannaiini** Neveu-Lemaire, 1944 * (2 subtribes, 9 genera, 53 species)⁴¹⁵

Subtribe **Viannainii** Neveu-Lemaire, 1944 * (8 genera, 52 species)

Genus *Avellaria* Freitas & Lent, 1934 (2 species)

405 Included here by Ben Slimane *et al.* (1996).

406 Created as a subfamily by Skryabin & Shultz (1937), and as a family by Durette-Desset & Chabaud (1981).

407 Created as a subfamily by Inglis (1968).

408 Created as a subfamily by Skryabin & Shultz (1937), and as a family by Durette-Desset & Chabaud (1981).

409 Originally created as a family by Yamaguti (1961).

410 Placed here on the basis of similarity to Herpetostongylinae (Beveridge *et al.* 2010).

411 Raised to family by Durette-Desset & Chabaud (1981).

412 Created as a subfamily by Travassos (1937), and as a family by Durette-Desset & Chabaud (1981).

413 Created as a subfamily by Durette-Desset *et al.* (1976).

414 Created as a subfamily by Travassos (1937), and as a family by Durette-Desset & Chabaud (1981).

415 Created as a subfamily by Neveu-Lemaire (1944), and as a family by Durette-Desset & Chabaud (1981).

Genus *Ierestrongylus* Cameron, 1935 (1 species)
 Genus *Nesomystrongylus* Durette-Desset, Lethonen & Haukisalmi, 2002 (1 species)

Suborder **Agfaina** Hodda, 2007 (1 superfamily, 1 family, 1 subfamily, 1 genus, 3 species)⁴³¹
 Superfamily **Agfoidea** Dougherty, 1955 (Hodda, 2007) (1 family, 1 subfamily, 1 genus, 3 species)

429 Created as a subfamily by Neveu Lemaire (1934).

430 Created as a subfamily by Hall (1916).

431 Placed with moderate support in Peloderidae on molecular evidence (Ross *et al.* 2010), but other molecular evidence is lacking (De Ley & Blaxter 2004). The position of Agfidae is unresolved on morphological evidence (Ribas & Casanova 2002, Inglis 1983), and it has been placed within Cylindrocorporoidea, Myolaimidae and Rhabditomorpha. There are only 3 species of the family, which are all parasites of slugs. All have an unusual combination of characters, some of which may be plesiomorphic for Rhabditina, and some of which may be apomorphic hence its current placement as a suborder. More investigation is required.

Family **Agfidae** Dougherty, 1955 (1 subfamily, 1 genus, 3 species)

 Subgenus *Punctocamallanus* Moravec & Scholz, 1991 (1 species)
 Subgenus *Spirococamallanus* Olsen, 1952 (115 species)
 Species *bothi* Moravec & Justine, 2019

432 Spermatogenesis and development provide evidence for the separation of Spirurida, Rhabditida and Panagrolaimida (Yushin & Malakhov 2004, Schierenberg & Lahl 2004).

433 Originally named suborder Spirurata (Railliet & Henry 1915) prior to adoption of current system of uniform endings of higher-ranked taxon names. First used in current form by Chitwood (1937).

434 Proposed as a genus by Khera (1956).

- Superfamily **Habronematoidea** Chitwood & Wehr, 1932 (Anderson, Chabaud & Wilmott, 1974) (4 families, 8 subfamilies, 50 genera, 488 species)⁴⁴³
- Family **Cystidicolidae** Skryabin, 1946 (Skryabin, Shikhobalova & Sobolev, 1949) (1 subfamily, 22 genera, 192 species)⁴⁴⁴
- Subfamily **Cystidicolinae** Skryabin, 1946 (22 genera, 192 species)
- Tribe **Cystidicolini** Skryabin, 1946 *
- Subtribe **Cystidicolinii** Skryabin, 1933 *
- Genus *Ascarophis* Van-Beneden, 1871 (47 species)
- Species *morronei* Aguilar-Aguilar, Ruiz-Campos, Martorelli, Montes & Martinez-Aquino, 2019

⁴⁴³ This superfamily should be designated Tetrameroidae because the family Tetrameridae Travassos 1914 has priority over Hedrurinae Railliet 1916, and Histocephalinae Gendre 1922, and Habronematinae Chitwood & Wehr 1932 (Chabaud 1974). However, to preserve stability and because the other families are unusual for the group, Habronematoidea was chosen as the name for the group (Chabaud 1974).

⁴⁴⁴ Created as a subfamily by Skryabin (1946).

Genus *Foleyellides* Caballero, 1935 (16 species)

Species *mayenae* Romero-Mayen & Leon-Regagnon, 2016

Species *rhinellae* Garcia-Prieto, Ruiz-Torres, Osorio-Sarabia & Merlo-Serna, 2014

Genus *Madochotera* Bain & Brunhes, 1968 (1 species)

Genus *Ochoterenella* Caballero, 1944 (16 species)

Genus *Paramadochotera* Esslinger, 1986 (1 species)

Subfamily **Onchocercinae** Lieper, 1911 (44 genera, 306 species)

Tribe **Dirofilariini** Sandground, 1921 *⁴⁵³

Subtribe **Dirofilariinii** Sandground, 1921 *

Genus *Bostrichodera* Sandground, 1938 (1 species)

Genus *Dirofilaria* Railliet & Henry, 1910 (47 species)

Genus *Dirofilariaeformia* Lubimov, 1935 (1 species)

Genus *Edesonofilaria* Yeh, 1960 (2 species)

Genus *Macacanema* Schad & Anderson, 1963 (1 species)

Genus *Skrjabinodera* Gnedenina & Vsevolodov, 1947 (3 species)

Genus *Tawila* Khalil, 1932 (14 species)

Tribe **Onchocercini** Leiper, 1911 *

Subtribe **Onchocercinii** Leiper, 1911 *

Genus *Loxodontofilaria* Berghe & Gillain, 1939 (13 species)⁴⁵⁴

450 Placed in Filarioidea by Anderson & Bain (1976), but placed here on the basis of multi-gene evidence presented by Lefoulon *et al.* (2015).

451 Described as a subfamily by Anderson (1958).

452 Described as a subfamily by Bain & Prod'hon (1974).

453 Described as a subfamily by Sandground (1921).

454 Molecular evidence places this as a sister group to *Onchocerca* and related genera (Lefoulon *et al.* 2015), whereas morphology suggests

- Subgenus *Molinema* Freitas & Lent, 1939 (8 species)
 Subgenus *Orihelia* Chabaud & Bain, 1976 (5 species)
 Genus *Onchocerca* Diesing in Hermann, 1841 (37 species)
 Species *takaokai* Uni, Fukuda, Agatsuma, Bain, Otsuka, Nakatani, Matsabayashi,
 Harada, Omar, Ramli, Hashim, Azirun & Takaoka, 2015
- Tribe **Dipetalonematinii** Wehr, 1935 *⁴⁵⁵
- Subtribe **Dipetalonematini** Wehr, 1935 *
- Genus *Dipetalonema* Diesing, 1861 (38 species)
 Subgenus *Alafilaria* Yates & Jorgenson, 1983 (2 species)
 Subgenus *Dasypafilaria* Eberhard, 1982 (1 species)
 Subgenus *Dipetalonema* Diesing, 1861 (35 species)
- Subtribe **Acanthochielonemini** Faust, 1939^{456 457}
- Genus *Acanthocheilonema* Cobbold, 1870 (12 species)⁴⁵⁸
 Genus *Ackertia* Vaz, 1934 (4 species)
 Genus *Agamofilaria* Stiles, 1907 (2 species)
 Genus *Andersonfilaria* Bartlett & Bain, 1987 (2 species)
 Genus *Bisbalia* Bain & Guerrero, 2003 (1 species)
 Genus *Cercopithifilaria* Eberhard, 1980 (25 species)
 Genus *Chabfilaria* Bain, Dedet & Purnom, 1983 (2 species)
 Genus *Cherylia* Bain, Petit, Jacquet, Viallet & Houin, 1985 (1 species)
 Genus *Courduriella* Chabaud, Brygoo & Petter, 1961 (1 species)
 Genus *Cruorifilaria* Eberhard, Morales & Orihel, 1976 (1 species)
 Genus *Cystofilaria* Skryabin & Schikhobalova, 1948 (1 species)
 Genus *Dessetfilaria* Bartlett & Bain, 1987 (2 species)
 Genus *Elaeophora* Railliet & Henry, 1912b (4 species)
 Genus *Filarissima* Chabaud, 1974 (1 species)
 Genus *Fuscicorpa* Wehr, 1936 (1 species)
 Genus *Josefilaria* Moorhouse, Bain & Wolf, 1979 (1 species)
 Genus *Litomosa* Yorke & Maplestone, 1926 (17 species)
 Genus *Litomosoides* Chandler, 1931 (40 species)
 Species *ysoguazu* Notarnicola & De-La-Sancha, 2015
 Genus *Loaina* Eberhard & Orihel, 1984 (2 species)
 Genus *Macdonaldius* Khanna, 1933 (4 species)
 Genus *Microfilaria* Cobbold, 1882 (6 species)
 Genus *Migonella* Lent, Freitas & Proenca, 1946 (1 species)
 Genus *Molossinema* Georgi, Georgi, Jiang & Frongillo, 1987 (1 species)
 Genus *Monanema* Anteson, 1968 (4 species)
 Genus *Paraechoterenella* Purnomo & Bangs, 1999 (1 species)
 Genus *Paraprocta* Maplestone, 1931 (1 species)
 Genus *Paulianfilaria* Chabaud, Petter & Golvan, 1961 (1 species)
 Genus *Pseudolitomosa* Yamaguti, 1941 (1 species)
 Genus *Rumenfilaria* Lankester & Snider, 1982 (1 species)
 Genus *Serofilaria* Wu & Yun in Wu, Yun, Jia, Xu & Xiao-Nin, 1979 (1 species)
 Genus *Skrjabinofilaria* Travassos, 1925 (3 species)
 Genus *Sprattianema* nom. nov. pro *Sprattia* Chabaud & Bain, 1976 nec *Sprattia* O.
 Boettger, 1883 (Mollusca, Pulmonata) (2 species)
 Genus *Strianema* Eberhard Orihel & Campo-Aasen, 1993 (1 species)

a subgenus of *Dipetalonema* (Gibbons 2010). As the molecular analysis included many genes, it has been preferred.

455 Originally created as a subfamily by Wehr (1935).

456 Originally created as a family and subfamily by Faust (1939).

457 Based on molecular evidence Lefoulon *et al.* (2015).

458 Raised from a subgenus of *Dipetalonema* on molecular evidence (Lefoulon *et al.* 2015).

Genus *Yatesia* Bain Baker & Chabaud, 1982 (1 species)
 Subfamily **Setariinae** Yorke & Maplestone, 1926 (2 genera, 49 species)
 Tribe **Setariini** Yorke & Maplestone, 1926 *
 Subtribe **Setariini** Yorke & Maplestone, 1926 *
 Genus *Papillosetaria* Vevers, 1922 (3 species)
 Genus *Setaria* Viborg, 1795 (46 species)
 Subfamily **Splendidofilariae** Chabaud & Choquet, 1953 (27 genera, 268 species)
 Tribe **Loaini** n. tribe ⁴⁵⁹
 Subtribe **Loainii** n. subtribe *
 Genus *Foleyella* Seurat, 1917 (10 species)
 Genus *Loa* Stiles, 1905 (4 species)
 Genus *Pelecitus* Railliet & Henry, 1910 (34 species)
 Tribe **Splendidofilarii** Chabaud & Chocquet, 1953 *
 Subtribe **Breinliini** n. subtribe ⁴⁶⁰
 Genus *Breinlia* Yorke & Maplestone, 1926 (22 species)
 Subgenus *Breinlia* Yorke & Maplestone, 1926 (20 species)
 Species *jittapalapongi* Veciana, Bain, Morand, Chaisiri, Douangboupha, Miquel &
 Ribas, 2015
 Subgenus *Johnstonema* Yeh, 1957 (2 species)
 Genus *Mansonella* Faust, 1929 (29 species)
 Subgenus *Cutifilaria* Bain & Schulz-Key, 1974 (2 species)
 Subgenus *Esslingeria* Chabaud & Bain, 1976 (4 species)
 Subgenus *Filiamagutia* Bain & Uni, 2011 (1 species)
 Species *akItensis* (Uni, 1983) Bain & Uni, 2011
 Subgenus *Mansonella* Faust, 1929 (9 species)
 Subgenus *Pseudolitosoma* Bain & Uni, 2011 (1 species)
 Species *musabi* (Yamaguti, 1941) Bain & Uni, 2011
 Subgenus *Tetrapetalonema* Faust, 1935 (11 species)
 Subgenus *Tupainema* Eberhard & Orihel, 1984 (1 species)
 Genus *Sandnema* Chabaud & Bain, 1976 (Bain, Mutafchiev, Junker, Guerrero, Martin,
 Lefoulon & Uni, 2015) (21 species)
 Subtribe **Splendidofilarii** Chabaud & Chocquet, 1953 *
 Genus *Aproctella* Cram, 1931 (13 species)
 Genus *Aproctoides* Chandler, 1929 (3 species)
 Genus *Avifilaris* Chapman Saunders, 1955 (2 species)
 Genus *Cardianema* Alicata, 1933 (1 species)
 Genus *Cardiofilaria* Strom, 1937 (9 species)
 Genus *Chandlerella* Yorke & Maplestone, 1926 (25 species)
 Genus *Dunnifilaria* Mullin & Balasingham, 1973 (3 species)
 Genus *Madathamugadia* Chabaud, Anderson & Brygoo, 1959 (7 species)
 Genus *Meningonema* Orihel & Esslinger, 1973 (1 species)
 Genus *Micipsella* Seurat, 1921 (2 species)
 Genus *Onchocercella* Yorke & Maplestone, 1931 (1 species)
 Genus *Paronchocerca* Peters, 1936 (12 species)
 Genus *Protofilaria* Chandler, 1929 (1 species)
 Genus *Pseudlemdana* Sonin & Shumilo, 1964 (1 species)
 Genus *Pseudothamugadia* Lopez-Neyra, 1956 (1 species)
 Genus *Splendidofilaria* Skryabin, 1923 (19 species)
 Subgenus *Arteriosfilaria* Lopez, Caballero & Jiminez-Millan, 1979 (1 species)

459 Type genus is *Loa* Stiles 1905. Based on molecular evidence (Lefoulon *et al.* 2015). Otherwise with the features of the family.

460 Type genus is *Breinlia* Yorke & Maplestone 1926. Based on molecular evidence (Lefoulon *et al.* 2015). Otherwise with the features of the family.

- Subgenus *Avifilaria* Lopez, Caballero & Jiminez-Millan, 1979 (1 species)
 Subgenus *Soninella* Lopez, Caballero & Jiminez-Millan, 1979 (1 species)
 Subgenus *Splendidofilaria* Skryabin, 1923 (16 species)
- Genus *Striatofilaria* Lubimov, 1927 (2 species)
 Genus *Thamugadia* Seurat, 1917 (6 species)
- Tribe **Wuchererini** n. tribe⁴⁶¹
- Subtribe **Wuchererini** n. subtribe *
- Genus *Brugia* Buckley, 1960 (10 species)
 Subgenus *Brugia* Buckley, 1960 (9 species)
 Subgenus *Brugiella* Dissanaike & Paramananthan, 1961 (1 species)
- Genus *Malayfilaria* Uni, Mat-Udin & Takaoka in Uni, Udin, Agatsuma, Sajntha, Junker, Ramli, Omar, Lim, Sivanandam, Lefoulon, Martin, Belabut, Kasim, Halim, Zainuri, Bhassu, Fukuda, Matsabayashi, Harada, Low, Chen, Suganuma, Hashim, Takaoka & Azirun, 2017 (1 species)
- Species *sofiani* Uni, Mat-Udin & Takaoka in Uni, Udin, Agatsuma, Sajntha, Junker, Ramli, Omar, Lim, Sivanandam, Lefoulon, Martin, Belabut, Kasim, Halim, Zainuri, Bhassu, Fukuda, Matsabayashi, Harada, Low, Chen, Suganuma, Hashim, Takaoka & Azirun, 2017
- Genus *Wuchereria* Silva-Araujo, 1877 (28 species)
- Superfamily **Aproctoidea** Yorke & Maplestone, 1926 (Chabaud, 1975) (2 families, 3 subfamilies, 10 genera, 69 species)
- Family **Aproctidae** Yorke & Maplestone, 1926 (Skryabin & Schikhobalova, 1945) (2 subfamilies, 6 genera, 59 species)
- Subfamily **Aprocinae** Yorke & Maplestone, 1926 (5 genera, 57 species)
- Tribe **Aprocini** Yorke & Maplestone, 1926 *
- Subtribe **Aprocinii** Yorke & Maplestone, 1926 *
- Genus *Aprocota* Linstow, 1883 (39 species)
 Genus *Hovorkonema* Jurasek, 1977 (3 species)
 Genus *Mawsonfilaria* Anderson & Chabaud, 1958 (1 species)
 Genus *Pseudaprocta* Schikhobalova, 1930 (8 species)
 Genus *Squamofilaria* Schmerling, 1925 (6 species)
- Subfamily **Tetracheilonematinae** Wehr, 1935 (1 genus, 2 species)
- Tribe **Tetracheilonematini** Wehr, 1935 *
- Subtribe **Tetracheilonematini** Wehr, 1935 *
- Genus *Tetracheilonema* Diesing, 1861 (2 species)
- Family **Desmidocercidae** Cram, 1927 (1 subfamily, 4 genera, 10 species)
- Subfamily **Desmidocercinae** Cram, 1927 (4 genera, 10 species)
- Tribe **Desmidocercini** Cram, 1927 *
- Subtribe **Desmidocercinii** Cram, 1927 *
- Genus *Desmidocerca* Skryabin, 1916 (1 species)
 Genus *Desmidocercella* Yorke & Maplestone, 1926 (4 species)
 Genus *Diomedenema* Johnston & Mawson, 1952 (3 species)
- Species *tavaresi* Knoff, Santos, Giese, Gomes & Silva-Sousa, 2018
 Genus *Skrjabinocercella* Gushanskaya, 1953 (2 species)
- Superfamily **Diplotriaenoidea** Skryabin, 1916 (Anderson, 1958) (1 family, 2 subfamilies, 13 genera, 111 species)
- Family **Diplotriaenidae** Skryabin, 1916 (Anderson, 1958) (2 subfamilies, 13 genera, 111 species)
- Subfamily **Dicheilonematinae** Wehr, 1935 (8 genera, 41 species)
- Tribe **Dicheilonematini** Wehr, 1935 *
- Subtribe **Dicheilonematini** Wehr, 1935 *

461 Type genus is *Wuchereria* Silva-Araujo 1877. Based on molecular evidence (Lefoulon *et al.* 2015). Otherwise with the features of the family.

- Genus *Dicheilonema* Diesing, 1861 (10 species)
- Genus *Hamatospiculum* Skryabin, 1916 (9 species)
- Genus *Hastospiculum* Skryabin, 1923 (8 species)
- Genus *Heterospiculum* Schigin, 1951 (2 species)
- Genus *Monopetalonema* Diesing, 1861 (3 species)
- Genus *Petrovifilaria* Sonin, 1961 (1 species)
- Genus *Serratospiculoides* Sonin, 1968 (1 species)
- Genus *Serratospiculum* Skryabin, 1915 (7 species)
- Subfamily **Diplotriaeninae** Skryabin, 1916 (5 genera, 70 species)
- Tribe **Diplotriaenini** Skryabin, 1916 *
- Subtribe **Diplotriaenii** Skryabin, 1916 *
- Genus *Chabaudiella* Diaz-Ungria, 1963 (1 species)
- Genus *Diplotriaena* Railliet & Henry in Henry & O'Zoux, 1909 (65 species)
- Species *passeri* Chandio, Dharejo, Naz & Khan, 2015
- Species *saheefi* Soomro, Ghachal, Yusuf & Narejo, 2016
- Genus *Quadriplotriaena* Wehr, 1939 (2 species)
- Genus *Spinodiplotriaena* Kalyankar & Palladwar, 1989 (1 species)
- Genus *Versternema* Bain, Chabaud & Burger, 1992 (1 species)
- Superfamily **Lucionematoidea** Moravec, Molnar & Szekely, 1998 (Hodda, 2011) (1 family, 1 subfamily, 1 genus, 1 species)⁴⁶²
- Family **Lucionematidae** Moravec, Molnar & Szekely, 1998 (1 subfamily, 1 genus, 1 species)

- Tribe **Lucionematini** Moravec, Molnar & Szekely, 1998 *
- Subtribe **Lucionematinii** Moravec, Molnar & Szekely, 1998 *
- Genus *Lucionema* Moravec, Molnar & Szekely, 1998 (1 species)
- Suborder **Dracunculina** Hodda, 2007 (2 superfamilies, 8 families, 13 subfamilies, 40 genera, 325 species)⁴⁶³
- Superfamily **Dracunculoidea** Stiles, 1907 (Cameron, 1934) (7 families, 12 subfamilies, 38 genera, 320 species)
- Family **Daniconematidae** Moravec & Koie, 1987 (1 subfamily, 3 genera, 4 species)
- Subfamily **Daniconematinae** Moravec & Koie, 1987 * (3 genera, 4 species)
- Tribe **Daniconematini** Moravec & Koie, 1987 *
- Subtribe **Daniconematinii** Moravec & Koie, 1987 *
- Genus *Daniconema* Moravec & Koie, 1987 (1 species)
- Genus *Mexiconema* Moravec, Vidal & Salgado-Maldonado, 1992 (2 species)
- Genus *Syngnathinema* Moravec, Spangenberg & Frasca, 2001 (1 species)
- Family **Dracunculidae** Stiles, 1907 (Leiper, 1912) (1 subfamily, 3 genera, 16 species)⁴⁶⁴
- Subfamily **Dracunculiniae** Stiles, 1907 * (3 genera, 16 species)
- Tribe **Dracunculini** Stiles, 1907 *
- Subtribe **Dracunculinii** Stiles, 1907 *
- Genus *Avioserpens* Wehr & Chitwood, 1934 (4 species)
- Genus *Dracunculus* Reichard, 1759 (11 species)
- Genus *Lockenloia* Adamson & Caira, 1991 (1 species)
- Family **Guyanemidae** Petter, 1974 (1 subfamily, 4 genera, 11 species)
- Subfamily **Guyaneminae** Petter, 1974 (Petter, 1975) (4 genera, 11 species)
- Tribe **Guyanemini** Petter, 1974 *
- Subtribe **Guyaneminii** Petter, 1974 *

462 The sole species in the family Lucionematidae has an unusual suite of characters for Spirurida (Moravec *et al.* 1998), so is placed in a separate superfamily.

463 The affinities of Dracunculoidea have long been with Spirurida on morphological grounds (Chabaud 1974), and were unresolved in early molecular analyses (Holterman *et al.* 2006, De Ley & Blaxter 2004), when clear molecular evidence was presented it confirmed affinities with Spirurida (Van Megen *et al.* 2009).

464 Created as a subfamily by Stiles (1907).

- Genus *Guyanema* Petter, 1974 (5 species)
- Genus *Histodytes* Aragort, Alvarez, Iglesias, Leiro & Sanmartin, 2002 (1 species)

- Subfamily **Gyoeryiinae** Kloss, 1958 (5 genera, 28 species)

469 *Longior* *alius* Garcia & Coy 1994 was proposed as a synonym of *Longior longior* Morffe & Garcia, 2011, despite being the junior name.

470 Created as a subfamily by Chitwood (1932).

471 First subfamily Gyoeryiinae Kloss 1958, but with genus synonymization of genus *Gyoeryia* Kloss 1958 with *Pseudonymus* Diesing 1857 by Adamson & Van Waerebeke (1992), the name Gyoeryiinae is retained under ICZN article 40.1 which states that a family-group name is maintained even if the type genus is synonymized, as is the case here. The first name used as a family was Pseudonymidae Adamson & Van Waerebeke 1992, but this is more recent than Gyoeryiinae Kloss 1958 and by the principle of coordination Gyoeryiidae Kloss 1958.

syn *spheniscus* Johnston & Mawson, 1942 (Garbin Diaz & Navone, 2019)

Species *qudrripapillatum* Saad, Younis & Rabei, 2018

Species *rudolphii* Hartwich, 1964

syn *spiculigerum* (Rudolphi, 1809) Railliet & Henry, 1912b partim⁴⁸¹ (Hartwich, 1964)

Genus *Duplicaecum* Majumdar & Chakravarty, 1963 (1 species)

476 Originally created as family Acantocheilidae by Wuelker (1930).

477 Original spelling Anisakinea (Chabaud 1965).

478 Original spelling Contraeacinea (Mozgovoi & Shakhmatova 1971).

479 Including a species for which the “distinct morphological features are convincing and support the presence of a new *Contraeacum* species”, but without a formal description because “sufficient male specimens are lacking” (Garbin *et al.* 2019).

480 Reports of the species from pelicans only; reports from cormorants are *C. rudolphii* sensu lato, see Moravec (2009).

481 Reports of the species from cormorants only; reports from pelicans are *C. microcephalum*, see Moravec (2009).

 syn *Amplicaecum orientalis* Wang, 1965 (Sprent, 1988)
 Species *wangi* Li, Guo, Li & Zhang, 2014
 Genus *Polydelphis* Dujardin, 1845 (9 species)
 Subfamily **Ascaridinae** Baird, 1853 (18 genera, 203 species)
 Tribe **Ascaridini** Baird, 1853 *
 Subtribe **Ascaridinii** Baird, 1853 *
 Genus *Amphisakis* Chakravarty & Majumdar, 1960 (1 species)
 Genus *Ascaris* Linnaeus, 1758 (153 species)
 Genus *Ascarites* Poinar & Boucot, 2006 (3 species)⁴⁸⁶
 Species *rufferi* Da-Silva, Borba, Dutra, Leles, Da-Rosa, Ferreira & Araujo, 2014
 Genus *Bairdascaris* Sprent, 1982 (1 species)
 Genus *Bauruascaris* Cardia, Bertini, Camossi & Letizio, 2019 (4 species)⁴⁸⁷

482 *Phocascaris* Hoest 1932 was accepted as valid most recently by Gibbons (2010), and previously by Fagerholm (1991) and Hartwich (1974), based on morphological evidence. Soleim (1984) considered the distinguishing morphological characters (interlabia) inconsistent, and so formally synonymized the *Phocascaris* with *Contracaecum*. Molecular and biochemical evidence suggests *Phocascaris* is within a polyphyletic genus *Contracaecum* Railliet & Henry 1912 (eg Mattiucci *et al.* 2008, Nadler *et al.* 2000, 2005, Nascetti *et al.* 1993, 1997, Orecchia *et al.* 1986), while biological evidence suggests synonymy (Berland 1964). The almost certain polyphyly of the genus *Contracaecum* means that the genus *Phocascaris* may be a valid or invalid name, depending on the monophyletic units into which the genus is divided and the phylogenetic position and status of the type species *P. phocae* Hoest 1932 within the re-organized group. For this reason, *Phocascaris* is retained in the current classification *pro quo*.

483 Originally created as *Angusticaecinea* (Chabaud 1965).

484 Also *Ophidascaridinea* (Chabaud 1965).

485 Considered a synonym of *Ophidascaris piscatori* by Sprent (1988), but valid by Li Gibson & Zhang (2016).

486 Fossil, known from egg only.

487 Fossil, known from egg only.

Subgenus *Tepuinema* Diaz-Ungria, 1964 (1 species)

Genus *Travassalodapa* Lopez-Neyra, 1945 (1 species)

Family **Maupasinidae** Lopez-Neyra, 1945 (Inglis, 1960) (1 subfamily, 1 genus, 2 species)⁵⁰⁰

Subfamily **Maupasininae** Lopez-Neyra, 1945 (1 genus, 2 species)

Tribe **Maupasinini** Lopez-Neyra, 1945 *

Subtribe **Maupasininii** Lopez-Neyra, 1945 *

Genus *Maupasina* Seurat, 1913 (2 species)

Superfamily **Seuratoidea** Railliet, 1906 (Chabaud, Campanarouget & Brygaa, 1959) (5 families, 10 subfamilies, 41 genera, 390 species)

Family **Chitwoodchabaudiidae** Puylaert, 1970 (1 subfamily, 1 genus, 1 species)

Subfamily **Chitwoodchabaudiinae** Puylaert, 1970 * (1 genus, 1 species)

Tribe **Chitwoodchabaudiini** Puylaert, 1970 *

Subtribe **Chitwoodchabaudiinii** Puylaert, 1970 *

Genus *Chitwoodchabaudia* Puylaert, 1970 (1 species)

Family **Cucullanidae** Cobbold, 1864 (2 subfamilies, 5 genera, 264 species)

Subfamily **Campanarougetiinae** Le-Van-Hoa & Pham-Ngoc-Khue, 1971 (2 genera, 5 species)

Tribe **Campanarougetiini** Le-Van-Hoa & Pham-Ngoc-Khue, 1971 *

499 Proposed as a family by Berghe & Vuylsteke (1938).

500 Created as a subfamily by Lopez-Neyra (1945), but a synonym of Dubioxuridae Ortlepp 1937 which has not been used because the type genus *Duboxuris* Ortlepp 1937 has been synonymized with *Maupasina* Seurat 1913.

Subtribe **Campanaroougetiini** Le-Van-Hoa & Pham-Ngoc-Khue, 1971 *

- Genus *Campanaroougetia* Le-Van-Hoa & Pham-Ngoc-Khue, 1967 (2 species)
- Genus *Oceanicucullanus* Schmidt & Kuntz, 1969 (3 species)

Subfamily **Cucullaninae** Cobbold, 1864 (3 genera, 259 species)

Tribe **Cucullanini** Cobbold, 1864 *

Subtribe **Cucullanini** Cobbold, 1864 *

- Genus *Cucullanus* Mueller, 1777 (189 species)⁵⁰¹
 - Subgenus *Cucullanus* Mueller, 1777 (169 species)
 - Species *austropacificus* Moravec & Justine, 2018

Family **Aphelenchoididae** Skarbilovich, 1947 (Paramonov, 1953) (2 subfamilies, 16 genera, 312

514 Hodda (2007) considered the Superfamilies Aphelenchoioidea and Aphelenchoidea as belonging to the different suborders Panagrolaimina and Tylenchina, respectively, because of consistent differentiation with support on molecular evidence (De Ley & Blaxter 2004, Holterman *et al.* 2006, Meldal *et al.* 2006, Smythe *et al.* 2006). The most recent molecular evidence resolved the superfamilies into different clades with statistical support, but did not show closer affinities to either Panagrolaimina or Tylenchina (Van Megen *et al.* 2009). De Ley & Blaxter (2002) and De Ley *et al.* (2006), despite the clear molecular evidence, as well as morphological differences, considered the morphological similarities most important and put the two groups together (as families Aphelenchidae and Aphelenchoididae) in infraorder Tylenchomorpha (= suborder Tylenchina in the current classification). Here the superfamilies are regarded as separate, based on both the molecular evidence and morphology. Morphological differences include most notably the development of the posterior oesophagus, the presence or absence of bursae and gubernacula, as well as other features. The present classification reflects the morphological differences as being apomorphies within Aphelenchina defining the superfamilies, but the superfamilies are together regarded as a suborder on the basis of the long-noticed morphological apomorphies, most prominently the form of the median oesophageal bulb and the position of the oesophageal gland orifices (Hunt 1993, Geraert 1966, Thorne 1949). The suborder reflects the differentiation of both superfamilies from Panagrolaimina and Tylenchina, which has some molecular support (Sun *et al.* 2014).

515 Created as a subfamily by Fuchs (1937).

516 Fossil, Dominican amber.

517 Created as a subfamily by Skarbilovich (1947).

518 Described from material intercepted in China on plants shipped from USA.

519 Fossil, Dominican amber.

520 Including species partially characterized and not formally named (Davies *et al.* 2017a, b, Sriwati *et al.* 2017), as well as species indeterminata (Davies *et al.* 2015).

- Bartholomaeus, Zeng & Giblin-Davis, 2015
- syn *Schistonchus altissimus* Zeng, Ye, Huang, Li & Giblin-Davis, 2013
- Species *antherobenghalensis* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki,
Bartholomaeus, Herre, Esquivel & Giblin-Davis,
2017
- syn *antherobenghalensis* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki,
Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017
- Species *aureus* (De-Crappeo & Giblin-Davis, 2001) Davies, Ye, Kanzaki,
Bartholomaeus, Zeng & Giblin-Davis, 2015
- syn *Schistonchus aureus* (De-Crappeo & Giblin-Davis, 2001) Davies, Ye, Kanzaki,
Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species *auriculatae* Zen, Huang, Zhang, Zeng, Shi, Zhang, Peng, Ye & Giblin-Davis,
2019
- Species *bullenei* Davies, Ye, Kanzaki, Center, Bartholomaeus, Herre, Esquivel &
Giblin-Davis, 2017
- Species *benamina* (Bartholomaeus, Davies, Ye & Giblin-Davis, 2012) Davies, Ye,
Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- syn *Schistonchus benamina* Bartholomaeus, Davies, Ye & Giblin-Davis, 2013
- Species *centerae* (Zeng, Giblin-Davis & Ye, 2007) Davies, Ye, Kanzaki,
Bartholomaeus, Zeng & Giblin-Davis, 2015
- syn *Schistonchus centerae* Zeng, Giblin-Davis & Ye, 2007
- Species *costaricanus* Davies, Ye, Kanzaki, Center, Bartholomaeus, Herre, Esquivel
& Giblin-Davis, 2017
- Species *cuculloracemosus* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki,
Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017
- syn *cuculloracemosus* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki,
Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017
- Species *curtipes* Zhang, Zeng, Huang, Zeng, Peng, Ye, Huang & Giblin-Davis, 2019
- Species *fleckeri* (Davies, Bartholomaeus, Kanzaki, Ye & Giblin-Davis, 2013) Davies,
Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- syn *Schistonchus fleckeri* Davies, Bartholomaeus, Kanzaki, Ye & Giblin-Davis, 2013
- Species *kayai* Davies, Ye, Kanzaki, Center, Bartholomaeus, Herre, Esquivel &
Giblin-Davis, 2017
- Species *laevigatus* (DeCrappeo & Giblin-Davis, 2001) Davies, Ye, Kanzaki,
Bartholomaeus, Zeng & Giblin-Davis, 2015
- syn *Schistonchus laevigatus* DeCrappeo & Giblin-Davis, 2001
- Species *maxima* Davies, Ye, Center, Kanzaki, Bartholomaeus, Herre, Esquivel &
Giblin-Davis, 2017
- Species *microcarpus* (Zeng, Ye, Giblin-Davis, Li, Zhang & Du, 2011) Davies, Ye,
Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- syn *Schistonchus microcarpus* Zeng, Ye, Giblin-Davis, Li, Zhang & Du, 2013
- Species MSp.16 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species MSp.17 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species MSp.21 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species MSp.22 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species MSp.24 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species MSp.27 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species MSp.31 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species MSp.32 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species *mucrobenghalensis* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki,
Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017
- syn *mucrobenghalensis* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki,

Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017

Species *paraensis* Davies, Ye, Kanzaki, Center, Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017

Species *religiousus* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki, Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017

syn *religiousus* (Bajaj & Tomar, 2014) Davies, Ye, Center, Kanzaki, Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017

Species *virens* (Bartholomaeus, Davies, Kanzaki, Ye & Giblin-Davis, 2009) Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015

syn *Schistonchus virens* Bartholomaeus, Davies, Ye, Kanzaki & Giblin-Davis, 2009

Species *yoponensis* Davies, Ye, Center, Kanzaki, Bartholomaeus, Herre, Esquivel & Giblin-Davis, 2017

Species *zealandicus* (Zhao, Li, Ye & Davies, 2015) Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015

syn *Schistonchus zealandicus* Zhao, Li, Davies & Ye, 2015

Genus *Kashmira* Shah, Siddiqi & Handoo, 2015 (1 species)

Species *dimorphicauda* Shah, Siddiqi & Handoo, 2015

Genus *Japanema* Moosavi Aliramaji, Pourjam & Pedram, 2014 (1 species)

Species *entomophagus* (Nickle, 1970) Moosavi, Aliramaji, Pourjam & Pedram, 2014

syn *Sheraphelenchus entomophagus* Nickle, 1970

Genus *Laimaphelenchus* Fuchs, 1937 (19 species)

Species *hyrcanus* Miraeiz, Heydari, Maafi & Bert, 2015

syn *belgradiensis* Oro, 2015 (Maleita & Abrantes, 2018)

Species *suberensis* Nobre-Maleita, Costa & Abrantes, 2018

Genus *Martininema* Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015 (4 species)⁵²¹

Species *baculum* (Davies, Bartholomaeus, Kanzaki, Ye & Giblin-Davis, 2013) Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015

syn *Schistonchus baculum* Davies, Bartholomaeus, Kanzaki, Ye & Giblin-Davis, 2013

Species *fistulosus* (Zeng, Ye, Wang, Du & Giblin-Davis, 2013) Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015

syn *Schistonchus fistulosus* Zeng, Ye, Wang, Du & Giblin-Davis, 2013

Species *guangzhouense* (Zeng, Giblin-Davis & Ye, 2007) Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015

Species *semichordatae* Zhao, Zhang, Zeng & Huang, 2019

Genus *Oligaphelenchoides* Poinar, 1977 (5 species)⁵²²

Species *dominicanus* Poinar, 2011

Species *maximus* Poinar, 2011

Genus *Palaeoaphelenchoides* Poinar, 2011 (1 species)⁵²³

Species *balticus* Poinar, 2011

Genus *Ptychaphelenchus* Hodda, 2009c (1 species)

Genus *Punchaulus* De-Ley & Coomans, 1996 (1 species)

Genus *Robustodorus* Andrassy, 2007 (7 species)⁵²⁴

Species *arachidis* (Bos, 1977) Kanzaki, Shokoohi, Fourie, Swart, Muller & Giblin-Davis, 2018

521 None of the species not formally named in Davies *et al.* (2015, 2017a or 2017b) are in the clade that forms this genus, so none are counted here.

522 Fossil.

523 Fossil, Baltic amber.

524 Replacement name for *Megadorus* Goodey 1960 which is a homonym of *Megadorus* Linnauvori 1959 (Insecta: Hemiptera)

- syn *Aphelenchoides arachidis* Bos, 1977 (Kanzaki, Shokoohi, Fourie, Swart, Muller & Giblin-Davis, 2018)
- Species *helicus* (Heyns, 1964) Aliramaji, Pourjam, Alvarez-Ortega, Afshar & Pedram, 2018
- syn *Aphelenchoides helicus* Heyns, 1964
- Species *subtenius* (Cobb, 1926) Kanzaki, Shokoohi, Fourie, Swart, Muller & Giblin-Davis, 2018
- syn *Aphelenchus subtenius* Cobb, 1926
- syn *Aphelenchoides subtenius* (Cobb, 1926) Christie, 1942
- syn *Aphelenchoides hodsoni* Goodey, 1935 (Christie, 1942)
- Genus *Schistonchus* Cobb, 1927 (11 species)⁵²⁵
- Species *athertonensis* Davies, Bartholomaeus, Kanzaki & Giblin-Davis, 2013
- Species *cassowaryi* Davies, Bartholomaeus, Kanzaki, Ye & Giblin-Davis, 2013⁵²⁶
- Species *flagellobenghalensus* Bajaj & Tomar, 2014
- Species *flagelloracemosus* Bajaj & Tomar, 2014
- Species *hirtus* Zeng, Ye, Giblin-Davis, Li, Du & Zhao, 2010
- Species MSp. 5 Davies, Ye, Kanzaki, Bartholomaeus, Zeng & Giblin-Davis, 2015
- Species *molochi* Davies, Bartholomaeus, Kanzaki & Giblin-Davis, 2013
- Species *mucroracemosus* Bajaj & Tomar, 2014
- Species *superbus* Zeng, Ye, Li, Wang, Du & Giblin-Davis, 2013
- Genus *Sheraphelenchus* Nickle, 1970 (6 species)
- Species *brevigulonis* (Massey & Hinds, 1970) Hunt, 1993
- Species *entomophagus* Nickle, 1970
- Species *parabrevigulonis* Fang, Gu, Wang, Wang & Li, 2015
- Tribe **Albiziaphelenchini** n. tribe⁵²⁷
- Subtribe **Albiziaphelenchini** n. subtribe *
- Genus *Albiziaphelenchus* Bajaj, 2012 (1 species)
- Species *arthrorostris* Bajaj, 2012
- Subfamily **Anomyctinae** Goodey, 1960 (1 genus, 1 species)
- Tribe **Anomyctini** Goodey, 1960 *
- Subtribe **Anomyctinii** Goodey, 1960 *
- Genus *Anomyctus* Allen, 1940 (1 species)
- Family **Berntsenidae** Hodda, 2003 (1 subfamily, 1 genus, 2 species)
- Subfamily **Berntseninae** Hodda, 2003 * (1 genus, 2 species)
- Tribe **Berntsenini** Hodda, 2003 *
- Subtribe **Berntseninii** Hodda, 2003 *
- Genus *Berntsenus* Massey, 1974 (2 species)
- Family **Ektaphelenchidae** Paramonov, 1964 (1 subfamily, 4 genera, 95 species)
- Subfamily **Ektaphelenchinae** Paramonov, 1964 (4 genera, 95 species)
- Tribe **Ektaphelenchini** Paramonov, 1964 *
- Subtribe **Ektaphelenchinii** Paramonov, 1964 *
- Genus *Cryptaphelenchoides* J.B. Goodey, 1960 (5 species)
- Genus *Cryptaphelenchus* Fuchs, 1937 (34 species)
- Species *baujardi* Aliramaji, Miraeiz, Pourjam & Heydari, 2019
- Species *dominiclus* Poinar, 2011⁵²⁸
- Species *iranicus* Esmaeili, Heydari, Taheri, Fang & Li, 2016

525 Divided into 3 genera by Davies *et al.* (2015). Species indeterminata remain provisionally in *Schistonchus* sensu stricto.

526 *Species indeterminata* according to Davies *et al.* (2015). Here retained in original genus on the basis of morphological characters differentiating from other species and indicating affinities with the genus *Schistonchus*.

527 Type genus is *Albiziaphelenchus* Bajaj, 2012. Differentiated from Aphelenchoidini by shape of spicule, presence of preanal genital papillae and distinct oesophageal isthmus. Otherwise with the features of the family

528 Fossil, Dominican amber.

- Species *varicaudatus* Pedram, 2017
- Genus *Ektaphelenchoides* Baujard, 1984 (21 species)
- Species *caspensis* Aliramaji, Pourjam, Karegar, Atighi & Pedram, 2015
 - Species *fuchsi* Esmaeili, Heydari, Pourjam & Atighi, 2014
 - Species *maafiae* Golhasan, Esmaeili, Fang, Abolafia & Heydari, 2019
 - Species *persicus* Esmaeili, Golhasan, Tahmoures & Heydari 2918
 - Species *poinari* Aliramaji, Pourjam, Atighi, Ye, Roshan-Bakhsh & Pedram, 2014
 - Species *ruehami* Yaghoubi, Pourjam, Atighi & Pedram, 2014
 - Species *spondylus* Kanzaki, Giblin-Davis & Center, 2009
 - Species *tonekabonensis* Aliramaji, Pourjam, Miraeiz & Pedram, 2019
- Genus *Ektaphelenchus* Fuchs, 1937 (35 species)
- Species *berbericus* Alvani, Mahdikhani-Moghadam, Giblin-Davis & Pedram, 2016
 - Species *cupressi* Golhasan, Abdollahpour, Fang, Abolafia & Heydari, 2019
 - Species *kanzakii* Pedram, 2019
 - Species *koreanus* Gu, Maria, Fang & Liu, 2019
 - Species *oleae* Miraeiz, Heydari, Adeldoost & Ye, 2017
- Family **Entaphelenchidae** Nickle, 1970 (1 subfamily, 4 genera, 12 species)
- Subfamily **Entaphelenchinae** Nickle, 1970 (4 genera, 12 species)
- Tribe **Entaphelenchini** Nickle, 1970 *
- Subtribe **Entaphelenchinii** Nickle, 1970 *
- Genus *Entaphelenchus* Wachek, 1955 (6 species)
 - Genus *Peraphelenchus* Wachek, 1955 (3 species)
 - Species *orientalis* Kanzaki, Tanaka, Ikeda, Taki, Sugiura & Matsumoto, 2013
 - Genus *Praecocilenchus* Poinar, 1969 (2 species)
 - Genus *Roveaphelenchus* Nickle, 1970 (1 species)
- Family **Parasitaphelenchidae** Ruehm, 1956 (Siddiqi, 1980) (2 subfamilies, 5 genera, 217 species)
- Subfamily **Parasitaphelenchinae** Ruehm, 1956 (1 genus, 20 species)
- Tribe **Parasitaphelenchini** Ruehm, 1956 *
- Subtribe **Parasitaphelenchinii** Ruehm, 1956 *
- Genus *Parasitaphelenchus* Fuchs, 1929 (20 species)
 - Species *costati* Kanzaki, Ekino, Ide, Masuya & Degawa, 2018
 - Species *frontalis* Kanzaki, Ekino, Ide, Masuya & Degawa, 2018
- Subfamily **Bursaphelenchinae** Paramonov, 1964 (4 genera, 197 species)
- Tribe **Bursaphelenchini** Paramonov, 1964 *
- Subtribe **Bursaphelenchinii** Paramonov, 1964 *
- Genus *Bursaphelenchus* Fuchs, 1937 (174 species)
 - Species *andrassyi* Dayi, Calin, Akbulut, Gu, Schroder, Vieira & Braasch, 2014
 - Species *carpini* Kanzaki, Masuya, Ichihara, Maehara, Aikawa, Ekino & Ide, 2019
 - Species *cryphali* (Fuchs, 1930) Meyl, 1960
 - Subspecies *okhotskensis* Kanzaki, Masuya, Ichihara, Maehara, Aikawa, Ekino & Ide, 2019
 - Species *decremerae* Wang, Gu, Maria, Fang & Li, 2018
 - Species *fagi* Tomalak & Filipiak, 2014
 - Species *firmae* Kanzaki, Maehara, Aikawa & Matsumoto, 2012
 - Species *geraerti* Wang, Maria, Gu, Fang, Wang & Li, 2018
 - Species *gilliani* Schoenfeld, Braasch, Riedel & Gu, 2014
 - Species *hirsutae* Kanzaki, Ekino, Ide, Masuya & Degawa, 2018
 - Species *irokophilus* Torrini, Strangi, Mazza, Marianelli, Roversi & Kanzaki, 2019 ⁵²⁹
 - Species *kesiyae* Kanzaki, Aikawa, Maehara & Pham, 2016
 - Species *kiyoharai* Kanzaki, Maehara, Aikawa, Masuya & Giblin-Davis, 2011
 - Species *koreanus* Gu, Wang & Chen, 2013

⁵²⁹ Described from material intercepted in Italy but originally from Cameroon.

- Species *laciniatae* Kanzaki, Masuya, Ichihara, Maehara, Aikawa, Ekino & Ide, 2019
 Species *manipurensis* Chanu & Meitei, 2014
 Species *michaelseni* Tomalak & Filipiak, 2019
 Species *moensi* Wang, Maria, Gu, Fang, Wang & Li, 2018
 Species *mucronatus* Mamiya & Enda, 1979
 Subspecies *kolyensis* (Braasch, Gu & Burgermeister, 2011)
 Species *niphades* Tanaka, Tanaka, Akiba, Aikawa, Maehara, Takeuchi & Kanzaki, 2014
 Species *osumiana* Kanzaki, Akiba, Kanetani, Tetsuka & Ikegami, 2014
 Species *paraburgeri* Wang & Gu, 2012
 Species *paraluxuriosae* Gu, Wang, Braasch, Burgermeister & Schroeder, 2012
 Species *penai* Kanzaki, Giblin-Davis, Carillo, Duncan & Gonzalez, 2014
 Species *parantoniae* Munawar, Fang, He, Gu & Li, 2015
 Species *piceae* Tomalak & Pomorski, 2015
 Species *populi* Tomalak & Filipiak, 2010
 Species *posterovulvus* Gu, Wang, He, Wang, Chen & Wang, 2014
 Species *pterocarpi* Gu, Fang, Liu, Pedram & Li, 2019⁵³⁰
 Species *rockyi* Wang, Fang, Maria, Gu & Ge, 2019⁵³¹
 Species *saudi* Gu, Maria, Fang, He, Braasch & Li, 2016
 Species *sakishimanus* Kanzaki, Okabe & Kobori, 2015
 Species *similis* Poinar, 2011⁵³²
 Species *sycophilus* Kanzaki, Tanaka, Giblin-Davis & Davies, 2014
 Species *tadamiensis* Kanzaki, Taki, Masuya & Okabe, 2012
 Species *taprhorychi* Tomalak, Malewski, Gu & Fa-Qiang, 2017
 Species *tiliae* Tomalak & Malewski, 2014
 Species *trypophloei* Tomalak & Filipiak, 2011
 Species *ulmophilus* Ryss, Polyanina, Popovichev & Subbotin, 2015
 Species *yuyaoensis* Gu, He, Wang & Chen, 2014
 Genus *Chalcidonema* Poinar, 2011 (1 species)⁵³³
 Species *paradoxa* Poinar, 2011
 Genus *Devibursaphelenchus* Kakulia, 1967 (8 species)
 Species *wangi* Gu, Wang & Zheng, 2010
 Species *kheirii* Aliramaji, Pourjam, Atighi, Karegar & Pedram, 2014
 Genus *Ruehmaphelenchus* Goodey, 1963 (14 species)⁵³⁴
 Species *digitulus* Gu & Wang, 2012
 Species *formosanus* Kanzaki, Masuya, Taki, Okabe & Chen, 2013
 Species *juliae* Kanzaki Giblin-Davis, Gonzalez, Duncan & Carrillo, 2015
 Species *quercophilus* Maria, Gu, Tomalak, Fang & Li, 2017
 Species *siricus* Bajaj, 2012
 Species *thailandae* Gu & Wang, 2010
 Family *Seinuridae* Husain & Khan, 1967 (Baranovskaya, 1981) (1 subfamily, 4 genera, 60 species)⁵³⁵
 Subfamily *Seinurinae* Husain & Khan, 1967 (4 genera, 60 species)
 Tribe *Seinurini* Husain & Khan, 1967 *
 Subtribe *Seinurinii* Husain & Khan, 1967 *
 Genus *Aprutides* Scognamiglio, Talame & s'Jacob, 1970 (2 species)

530 Described from material intercepted in China but originally from Ghana.

531 Described from material intercepted in China but originally from Russia.

532 Fossil, Dominican amber associated with platypodid beetle.

533 Fossil, Tertiary, Dominican amber.

534 Hunt (1993, 2007a, b) placed *Ruehmaphelenchus* in Aphelenchoididae on morphological grounds, but molecular evidence clearly places the genus with, or even within, the genus *Bursaphelenchus* (Kanzaki *et al.* 2009, 2014).

535 Created as a subfamily by Husain & Khan (1967).

&

- Genus *Papuaphelenchus* Andrassy, 1973 (1 species)
Genus *Paraseinura* Timm, 1961 (1 species)
Genus *Seinura* Fuchs, 1931 (56 species)
Species *caverna* Kanzaki, Ekino & Masuya, 2019
Species *hyrcania* Adeldoost, Heydari, Miriaezi, Jalalinasab & Ashgari, 2016
Species *onondagensis* Kaisa, 2000
Species *persica* Adeldoost, Heydari, Miriaezi, Jalalinasab & Ashgari, 2016
Family **Typhlorenchidae** Kanzaki, Li, Lan & Giblin-Davis, 2014 * (1 subfamily, 3 genera, 22 species)
Subfamily **Typhlorenchinae** Kanzaki, Li, Lan & Giblin-Davis, 2014 (3 genera, 22 species)

Subtribe **Typhlorenchinii** Kanzaki, Li, Lan & Giblin-Davis, 2014 *
Genus *Basilaphelenchus* Pedram, Kanzaki, Giblin-Davis & Pourjam, 2018 (3 species)
Species *brevicaudatus* Fouladvand Pourjam Kanzaki, Giblin-Davis & Pedram, 2019
Species *gorganensis* Fouladvand, Pourjam, Kanzaki, Giblin-Davis & Pedram, 2019
Species *persicus* Pedram, Kanzaki, Giblin-Davis & Pourjam, 2018
Genus *Pseudaphelenchus* Kanzaki, Giblin-Davis, Scheffrahn, Center & Davies, 2009 (12 species)
Species *jiaae* (Huang, Ye, Liang, Lu & Zhang, 2011) Fang, Li, Maria & Bert, 2016
syn *Typhlorenchus jiaae* Huang, Ye, Liang, Lu & Zhang, 2011 (Fang, Li, Maria & Bert, 2016)
Species *scheffrajni* Kanzaki, Li, Lan & Giblin-Davis, 2014
Species *sui* Kanzaki, Li, Lan & Giblin-Davis, 2014
Species *vindai* Kanzaki & Giblin-Davis in Kanzaki, Giblin-Davis, Herre, Scheffrahn
Center, 2010
Species *yukiae* Kanzaki, Giblin-Davis, Scheffrahn, Center & Davies, 2009
Species *zhoushanensis* Fang, Li, Maria & Bert, 2016
Genus *Typhlorenchus* Ruehm, 1956 (7 species)
Superfamily **Paraphelenchoidea** Goodey, 1951 (Hodda, 2007) (1 family, 1 subfamily, 1 genus, 24 species)
Family **Paraphelenchidae** Goodey, 1951 (Goodey, 1960) (1 subfamily, 1 genus, 24 species)^{536 537}
Subfamily **Paraphelenchinae** Goodey, 1951 (1 genus, 24 species)
Tribe **Paraphelenchini** Goodey, 1951 *
Subtribe **Paraphelenchinii** Goodey, 1951 *
Genus *Paraphelenchus* Micoletzky, 1922 (24 species)
Suborder **Tylenchina** Chitwood, 1950 (4 superfamilies, 26 families, 63 subfamilies, 236 genera, 3453 species)

536 Created as a subfamily by T Goodey (1951).

537 Paraphelenchidae are different from Aphelenchidae in many of the same features used to separate Aphelenchoididae from Aphelenchidae. Hence the differences may reflect a deep divergence. Paraphelenchidae share a number of features with Tylenchidae, such as an oesophageal isthmus with nerve ring around it, oesophageal glands enclosed in a bulb, vulva a transverse slit, and cephalated spicules. Paraphelenchidae differ from Tylenchidae in the major characters: location of oesophageal gland orifices, development of median oesophageal bulb, formation of stylet, genital papillae and the presence of a bursa, plus others. Thus Paraphelenchidae differ from Aphelenchidae in similar features as those differentiating other superfamilies within Tylenchina. Hence Paraphelenchoidea may represent a unique line of evolution within Tylenchina, and it is afforded superfamily status, even though some molecular data show Paraphelenchidae form a clade with Aphelenchidae (Van Meegen *et al.* 2009).

Superfamily **Anguinoidea** Nicoll, 1935 * (2 families, 3 subfamilies, 19 genera, 218 species)^{538 539}

Family **Anguinidae** Nicoll, 1935 (2 subfamilies, 17 genera, 188 species)

Subfamily **Anguininae** Nicoll, 1935 (Nicoll, 1926) (16 genera, 185 species)⁵⁴⁰

Tribe **Anguinini** Nicoll, 1935 *

Subtribe **Anguininii** Nicoll, 1935 *

Genus *Anguina* Scopoli, 1777 (13 species)

Species *obesa* Mobasseri, Pedram, Pourjam & Bertozzi, 2017

Genus *Chitinotylenchus* Micoletzky, 1922 (5 species)⁵⁴¹

Genus *Diptenichus* Khan, Chawla & Seshadri, 1969 (1 species)

Genus *Ditylenchus* Filipjev, 1936 (89 species)⁵⁴²

Species *arachis* Zhang, Liu, Janssen, Zhang, Xiao, Li, Couvreur & Bert, 2014

Species *gilanicus* Yaghoubi, Pourjam, Ye, Castillo & Pedram, 2018

Species *laurae* Skwiercz, Kornobis, Winiszewska, Przybylska, Obrepalska-Steplowska, Gawlak & Subbotin, 2017

Species *oncogenus* Vovlas, Troccoli, Palomares-Rius, Luca, Cantalapiedra-Navarrete, Liebanas, Landa, Subbotin & Castillo, 2016

Species *paraparvus* Hashemi & Karegar, 2019

Species *persicus* Esmaili, Heydari, Castillo & Palomares-Rius, 2017

Species *crenatae* Kanzaki, Ichihawa, Aikawa, Ekino & Masuya, 2019

Genus *Nothanguina* Whitehead, 1959 (1 species)

Genus *Nothotylenchoides* Handoo, 1980 (1 species)

Genus *Nothotylenchus* Thorne, 1941 (55 species)

Species *andrassyi* Jalalinasab, Hosseini & Heydari, 2018

538 Whether the Anguinoidea have closer affinities to Tylenchoidea or Sphaerularioidae has been discussed for some time based on morphological and life history evidence (Siddiqi 1986, 2000). Molecular evidence does not resolve the issue unequivocally (Meldal *et al.* 2007, Holterman *et al.* 2006, Van Megen *et al.* 2009). A polytomy is assumed here.

539 Originally constituted as Family Anguillulinidae by Baylis & Daubney (1926), with the type genus *Anguillulina* Gervais & Van Beneden 1859, which was regarded as a senior synonym of the genus *Tylenchus* Bastian 1865. Chitwood (1935) re-established *Anguina* Scopoli 1777 and designated *Vibrio tritici* Steinbuch 1799 as type species by subsequent designation (syn *Rhabditis tritici* (Steinbuch 1799) Dujardin 1845, *Anguillula tritici* (Steinbuch 1799) Grube 1849, *Anguillulina tritici* (Steinbuch 1799) Gervais & Van Beneden 1859, *Tylenchus tritici* (Steinbuch 1799) Bastian 1865). The genus *Vibrio* refers to bacteria and Protozoa. The genus *Rhabditis* refers to a different genus. Thus, the oldest name is *Anguillulina tritici* (Steinbuch 1799) Gervais & Van Beneden 1859. This, however, was rejected as invalid by ICZN in rulings 329 & 341 (1958). After Chitwood's (1935) publication, Nicoll (in Zoological Record) proposed the replacement names Anguinidae and Anguinoidea, to replace the names Anguillulinidae and Anguillulinoidea (and, coincidentally Tylenchidae as well).

Paramonov (1962) proposed Anguininae, which was raised to Family rank by Siddiqi (1971).

540 This date (1926) refers to the date of the name rejected by ICZN (Anguillulinidae Baylis & Daubney 1926) because it is based on a junior objective synonym (Anguillulina Gervais & Van Beneden 1859) for the genus *Anguina* Scopoli 1799.

541 Proposed as a subgenus, first proposed as genus by Filipjev (1936).

542 The genus *Ditylenchus* was divided into 2 groups (the *D. triformis*-group, and the *D. dipsaci*-group based on morphological and biological characters (Siddiqi 1980), as well as molecular evidence (Qiao *et al.* 2016). The former was putatively synonymous with *Safianema* (Qiao *et al.* 2016), although no new evidence was presented, and the other source of supposed molecular evidence (Giblin Davis *et al.* 2010), also having no evidence for the synonymization. *Safianema* differs morphologically from the *D. triformis* group in having a long oesophageal gland lobe overlapping the intestine dorsally, which is normally regarded as a generic difference, so the two genera are not synonymized here. In the absence of any molecular evidence, no particular grouping of the 2 genera is proposed. More recently described species formed a third molecular group (Shokoohi *et al.* 2018)

The evolutionary affinities of the genus conflict among different analyses and gene regions (Qiao *et al.* 2016).

Genus *Neomisticius* Siddiqi, 1986 (1 species)

Genus *Paurodontella* Husain & Khan, 1968 (18 species)

Species *composticola* Esmaeili, Heydari, Kheiri & Ye, 2019

Species *persica* Esmaili, Heydari & Ye, 2017

Species *gilanica* Yaghoubi, Pourjam & Pedram, 2018

Species *iranica* Golhasan, Heydari & Miraeiz, 2016

Species *parapitica* Esmaeili, Heydari & Ye, 2016

Genus *Paurodontoides* Jairajpuri & Siddiqi, 1969 (2 species)

Genus *Paurodontus* Thorne, 1941 (10 species)

Subfamily **Rubzovinematae** Slobodyanyuk, 1999 (1 genus, 3 species)

Tribe **Rubzovinematini** Slobodyanyuk, 1999 *

Subtribe **Rubzovinematinii** Slobodyanyuk, 1999 *

Genus *Rubzovinema* Slobodyanyuk, 1991 (3 species)

Species "Sp. 1" Koshel, Eroshenko & Kutyrev, 2018

Family **Parasitylenchidae** Siddiqi, 1986 (5 subfamilies, 12 genera, 54 species)

Subfamily **Heteromorphotylenchinae** Siddiqi, 1986 (1 genus, 2 species)

Tribe **Heteromorphotylenchini** Siddiqi, 1986 *

Subtribe **Heteromorphotylenchinii** Siddiqi, 1986 *

558 Originally in Tylenchinae (?), but associated with beetles, and superficially similar morphologically, so transferred here pending further inquiry.

559 Described from packing wood from Canada & USA intercepted in Chinese quarantine.

560 Also as family by Massey (1967).

Genus *Heteromorphotylenchus* Remillet & Van-Waerebeke, 1978 (2 species)

Subfamily **Heterotylenchinae** Siddiqi, 1986 (3 genera, 8 species)

Tribe **Heterotylenchini** Siddiqi, 1986 *

Subtribe **Heterotylenchini** Siddiqi, 1986 *

Genus *Heterotylenchus* Bovien, 1937 (3 species)

Genus *Paregletylenchus* Slobodyanyuk, 1984 (1 species)

Genus *Wachekitylenchus* Slobodianiuk, 1986 (4 species)

Subfamily **Kurochkinitylenchinae** Slobodyanyuk, 1999 (1 genus, 1 species)

Tribe **Kurochkinitylenchini** Slobodyanyuk, 1999 *

Subtribe **Kurochkinitylenchini** Slobodyanyuk, 1999 *

Genus *Kurochkinitylenchus* Slobodyanyuk, 1999 (1 species)

Subfamily **Parasitylenchinae** Siddiqi, 1986 (4 genera, 18 species)

Tribe **Parasitylenchini** Siddiqi, 1986 *

Subtribe **Parasitylenchini** Siddiqi, 1986 *

Genus *Anguillonema* Fuchs, 1938 (4 species)

Species *iranicum* Yaghoubi, Pourjam & Pedram, 2019

Genus *Helionema* Brzeski, 1962 (1 species)

Genus *Parasitylenchus* Micoletzky, 1922 (12 species)

Species *pseuobifurcatus* Camino, Rodriguez, Robredo & Gonzalez, 2019

Genus *Robleus* Massey, 1974 (1 species)

Subfamily **Spilotylenchinae** Slobodyanyuk, 1999 (3 genera, 25 species)

Tribe **Spilotylenchini** Slobodyanyuk, 1999 *

Subtribe **Spilotylenchini** Slobodyanyuk, 1999 *

Genus *Incurvinema* Deunff, Launay & Beaucornu, 1985 (1 species)

Genus *Psyllotylenchus* Poinar & Nelson, 1973 (16 species)

Genus *Spilotylenchus* Launay, Deunff & Bain, 1983 (8 species)

Family **Sphaerulariidae** Lubbock, 1861 (Skarbilovich, 1947) (1 subfamily, 4 genera, 32 species)

Subfamily **Sphaerulariinae** Lubbock, 1861 (4 genera, 32 species)

Tribe **Sphaerulariini** Lubbock, 1861 *

Subtribe **Sphaerulariini** Lubbock, 1861 *

Genus *Prothallonema* Christie, 1938 (25 species)

Genus *Sphaerularia* Dufour, 1837 (1 species)

Genus *Tripius* Chitwood, 1935 (5 species)

Species *balticus* Poinar, 2011⁵⁶¹

Species *gyraloura* Poinar & Thomas, 2014

Genus *Veleshkinema* Miraeiz, Heydari, Alvarez-Ortega, Pedram & Atighi, 2015 (1 species)

Species *iranicum* Miraeiz, Heydari, Alvarez-Ortega, Pedram & Atighi, 2015

Superfamily **Tylenchoidea** Oerley, 1880 (Chitwood & Chitwood, 1937) (14 families, 36 subfamilies, 127 genera, 2040 species)⁵⁶²

Family **Atylenchidae** Skarbilovich, 1959 (2 subfamilies, 2 genera, 7 species)

561 Fossil, Baltic amber.

562 The arrangement of the families Tylenchidae, Boleodoridae, Ecphyadophoridae, Atylenchidae, Tylodoridae and Psilenchidae differs markedly among different analyses of relationships using both morphological and molecular evidence. Siddiqi (2000) regarded Tylenchidae, Ecphyadophoridae, Atylenchidae, Tylodoridae and Psilenchidae as separate families, but with Boleodorinae as subfamily of Tylenchidae (along with several others) and Psilenchidae in a separate suborder. Geraert (2008) regarded Atylenchinae, Boleodorinae, Ecphyadophorinae, Tylenchinae and Tylodoridae as subfamilies of a greater Tylenchidae and did not recognise Psilenchidae because it was embedded within Tylenchinae. Holterman *et al.* (2006, 2008) and Bert *et al.* (2008) identified Tylodoridae as divergent from the other families and Ecdyaphoridae as unresolved. Van Megen *et al.* (2009) resolved Tylenchidae into at least two different resolved clades (Tylenchinae and Duosulciinae), and Ecphyadophoridae was resolved from both, with the relationships of the other families unresolved. In view of this conflicting evidence, all the clades clearly identifiable by either molecular or morphological analyses are regarded as separate families arising separately from a polytomy. Only extensive analyses of many species from each of these clades, analysed using multiple genetic and morphological characters, is likely to satisfactorily resolve this situation.

- Subfamily **Atylenchinae** Skarbilovich, 1959 (1 genus, 1 species)
- Tribe **Atylenchini** Skarbilovich, 1959 *
- Subtribe **Atylenchinii** Skarbilovich, 1959 *
- Genus *Atylenchus* Cobb, 1913 (1 species)

- Genus *Afritylenchus* Singbo, Ieden & Nesterov, 1988 (1 species)
- Genus *Apratylenchoides* Sher, 1973 (3 species)
- Genus *Hoplotyulus* s'Jacob, 1960 (5 species)
- Genus *Pratylenchoides* Winslow, 1958 (31 species)
- Species *persicus* Azizi, Eskandari, Karegar, Ghaderi, Van-Den-Elsen, Holterman & Helder, 2017

568 Classification follows Ghaderi (2019).

569 Recent molecular phylogenetic studies suggest this is a distinct lineage and hence a valid genus (Subbotin *et al.* 2018).

570 Originally regarded as related to Pratylenchidae (Thorne 1949), recent molecular studies show a clear affinity to Hoplolaimidae (Gafur 2014). After re-evaluation, some morphological features also support affinities with Hoplolaimidae (Gafur 2014). However, the overall appearance remains very close to Pratylenchidae, even if this is perhaps superficial and convergent.

- Genus *Radopholoides* De-Guiran, 1967 (4 species)
- Species *japonicus* Maria, Gu, Fang, He, Castillo & Li, 2017⁵⁷¹
- Genus *Radopholus* Thorne, 1949 (25 species)
- Genus *Zygradus* Siddiqi, 1991 (2 species)

 - Tribe **Rotylenchulini** Husain & Khan, 1967 *
 - Subtribe **Rotylenchulinii** Husain & Khan, 1967 *
 - Genus *Rotylenchulus* Linford & Oliveira, 1940 (14 species)
 - Species *macrosomoides* Berg, Palomares-Rius, Vovlas, Tiedt, Castillo & Subbotin, 2016
 - Genus *Senegalonema* Germani Luc & Baldwin, 1984 (1 species)
 - Subfamily **Verutinae** Esser, 1981 (2 genera, 4 species)
 - Tribe **Verutini** Esser, 1981 *
 - Subtribe **Verutinii** Esser, 1981 *
 - Genus *Bilobodera* Sharma & Siddiqi, 1992 (2 species)
 - Genus *Verutus* Esser, 1981 (2 species)
- Family **Telotylenchidae** Siddiqi, 1960 (Loof, 1987) (4 subfamilies, 20 genera, 416 species)⁵⁷⁴
- Subfamily **Macrotrophurinae** Fotedar & Handoo, 1978 (1 genus, 1 species)
 - Tribe **Macrotrophurini** Fotedar & Handoo, 1978 *
 - Subtribe **Macrotrophurinii** Fotedar & Handoo, 1978 *
 - Genus *Macrotraphurus* Loof, 1958 (1 species)
 - Subfamily **Meiodorinae** Siddiqi, 1976 (1 genus, 4 species)
 - Tribe **Meiodorini** Siddiqi, 1976 *
 - Subtribe **Meiodorinii** Siddiqi, 1976 *
 - Genus *Meiodorus* Siddiqi, 1976 (4 species)
 - Subfamily **Merliniinae** Siddiqi, 1971 (6 genera, 132 species)
 - Tribe **Merliniini** Siddiqi, 1971 *
 - Subtribe **Merliniinii** Siddiqi, 1971 *
 - Genus *Amplimerlinius* Siddiqi, 1976 (22 species)
 - Species *uramanatiensis* Ghaderi & Karegar, 2014
 - Genus *Geocenamus* Thorne & Malek, 1968 (21 species)
 - Species *conicaudatus* Ghaderi & Karegar, 2016
 - Species *vietnamensis* Nguyen, Le, Nguyen, Liebanas, Nguyen & Trinh, 2019
 - Genus *Merlinius* Siddiqi, 1970 (36 species)
 - Species *nagerensis* Sagir & Erum, 2017
 - Genus *Nagelus* Thorne & Malek, 1968 (28 species)

⁵⁷⁴ Created as a subfamily by Siddiqi (1960). Telotylenchidae first used at family level by Loof (1987) when transferring the genus *Telotylenchus* to the family Tylenchorhynchidae Eliava 1964.

- Genus *Scutylendonchus* Jairajpuri, 1971 (21 species)
- Genus *Telomerlinius* Siddiqi & Sturhan, 2014 (4 species)
- Species *mellumensis* Siddiqi & Sturhan, 2014
- Species *teleosus* Siddiqi & Sturhan, 2014
- Subfamily **Telotylenchinae** Siddiqi, 1960 (12 genera, 279 species)
- Tribe **Telotylenchini** Siddiqi, 1960 *
- Subtribe **Telotylenchini** Siddiqi, 1960 *
- Genus *Bitylenchus* Filipjev, 1934 (32 species)
- Species *hispaniertsis* Handoo, Palomares-Rius, Cantalapiedra-Navarrete, Liebanas, Subbotin & Castillo, 2014
- Genus *Histotylenchus* Siddiqi, 1971 (7 species)
- Genus *Neodolichorhynchus* Jairajpuri & Hunt, 1984 (17 species)
- Subgenus *Mulkorhynchus* Jairajpuri, 1988 (8 species)
- Subgenus *Neodolichorhynchus* Jairajpuri & Hunt, 1984 (8 species)
- Subgenus *Prodolichorhynchus* Jairajpuri, 1985 (1 species)
- Genus *Paratrophurus* Arias, 1970 (14 species)
- Genus *Quinisulcius* Siddiqi, 1971 (17 species)⁵⁷⁵
- Genus *Sauertylenchus* Sher, 1974 (5 species)
- Genus *Telotylenchoides* Siddiqi, 1971 (3 species)
- Genus *Telotylenchus* Siddiqi, 1960 (21 species)
- Species *manipurensis* Chanu, Meitei & Shah, 2016
- Genus *Trichotylenchus* Whitehead, 1959 (8 species)
- Species *gorganiensis* Ghaderi, Karegar & Miraeiz, 2018
- Genus *Trophurus* Loof, 1956 (16 species)
- Species *wuhuensis* Li, Du, Wang, Wang & Li, 2018
- Genus *Tylenchorhynchus* Cobb, 1913 (131 species)
- Species *clarus* Allen, 1955
- syn *variannus* Mavlianov, 1978 (Ghaderi & Karegar, 2016)
- Species *iranensis* Azmia, Mahdikhani-Moghadam, Rouhan & Memari, 2016
- Species *mediterraneus* Handoo, Palomares-Rius, Cantalapiedra-Navarrete, Liebanas, Subbotin & Castillo, 2014
- Genus *Uliginotylenchus* Siddiqi, 1971 (8 species)
- Family **Tylenchidae** Oerley, 1880 (Marcinowski, 1909) (3 subfamilies, 24 genera, 321 species)⁵⁷⁶
- Subfamily **Duosulciinae** Siddiqi, 1979 (7 genera, 93 species)
- Tribe **Duosulciini** Siddiqi, 1979 *
- Subtribe **Duosulciini** Siddiqi, 1979 *
- Genus *Allotylenchus* Andrassy, 1984 (1 species)
- Genus *Duosulcius* Siddiqi, 1979 (2 species)
- Genus *Malenchus* Andrassy, 1968 (46 species)
- Subgenus *Malenchus* Andrassy, 1968 (38 species)
- Species *cylindricus* Qing, Pereira, Slos, Couvreur & Bert, 2018
- Species *geraerti* Pedram, Soleymanzadeh, Pourjam & Mobasseri, 2018
- Species *herrerai* Mundo-Ocampo, Holovachov & Pereira, 2015
- Species *sexlineatus* Qing, Sanchez-Monge, Janssen, Couvreu & Bert, 2016
- Subgenus *Neomalenchus* Siddiqi, 1979 (3 species)
- Subgenus *Telomalenchus* Siddiqi, 2000 (5 species)
- Species *gilanensis* Jalalinasab, Adeldoost, Abolafia & Heydari, 2019
- Genus *Miculenchus* Andrassy, 1959 (7 species)
- Species *brevisalvus* Panahandeh, Pourjam, Alvarez-Ortega, Afshar & Pedram,

⁵⁷⁵ According to Hussain *et al.* (2019).

⁵⁷⁶ Qing & Bert (2019) suggested the family comprised 44 genera and 412 nominal species, and that the family should be split into several families, but this was not done formally.

2019

- Species *muscus* Panahandeh, Pourjam, Alvarez-Ortega, Afshar & Pedram, 2019

 Genus *Chiloplacus* Thorne, 1937 (33 species)
 Species *magnus* Rashid & Heyns, 1990
 syn *similis* Orselli & Vinciguerra, 2002 (Abolafia & Pena-Santiago, 2017)
 Species *mysteriosus* Abolafia & Pena-Santiago, 2018a
 Species *spannatus* (Waceke, Bumbarger, Mundo-Ocampo, Subbotin & Baldwin, 2005) Abolafia & Pena-Santiago, 2018a
 syn *Zeldia spannata* Waceke, Bumbarger, Mundo-Ocampo, Subbotin & Baldwin, 2005 (Abolafia & Pena-Santiago, 2018a)
 Genus *Nothacrobeles* Allen & Noffsinger, 1971 (15 species)

578 Also created as a family by Allen & Sher (1967), but in September. Paramonov published the same name in June.

579 Cephalobina and Rhabditina have been traditionally placed together in an Order Rhabditida. Molecular evidence consistently places the Cephalobina with Panagrolaimina (De Ley & Blaxter 2004, Holterman *et al.* 2006, Meldal *et al.* 2007, Van Megen *et al.* 2009). In addition, it appears that the origin of nerve cells in the oesophagus may be different in Rhabditidae to that in Cephalobidae and Panagrolaimidae (Borgonie *et al.* 2000). Early development is also different in *Caenorhabditis elegans* (Rhabditida) and *Acobeloides nanus* (Cephalobina) (Schierenberg 2000). The monophyly of the Cephalobina is supported on molecular evidence (Nadler *et al.* 2006).

580 Created as an Infraorder by De Ley & Blaxter (2002).

581 Created as subfamily by Artigas (1929) in a thesis, and Filipjev (1934).

- Genus *Onychonema* Baylis, 1943 (3 species)
- Genus *Siconema* Timm, 1966 (24 species)
- Genus *Siconemooides* Timm, 1966 (1 species)
- Genus *Sucamphida* Timm, 1966 (1 species)
- Genus *Synoecnema* Magalhaes, 1905 (23 species)
- Species *watinagii* Ivanova, Sumaya & Spiridonov, 2015
- Genus *Timmungella* Ivanova, Kozodoi & Spiridonov, 1987 (1 species)
- Subfamily **Ungellinae** Chitwood, 1950 (Spiridonov & Ivanova, 2005) (6 genera, 15 species)
- Tribe **Ungellini** Chitwood, 1950 *
- Subtribe **Ungellinii** Chitwood, 1950 *
- Genus *Acanthungella* Ivanova & Hope, 2004 (1 species)
- Genus *Patagoniella* Ivanova & Vaucher, 2005 (1 species)
- Genus *Plesioungella* Yeates, Spiridonov & Blakemore, 1998 (1 species)
- Genus *Thainema* Ivanova, Kozodoi & Spiridonov, 1987 (2 species)
- Genus *Ungella* Cobb, 1928 (9 species)
- Genus *Yagansiella* Ivanova & Vaucher, 2005 (1 species)
- Family **Homungellidae** Timm, 1966 (1 subfamily, 2 genera, 12 species)
- Subfamily **Homungellinae** Timm, 1966 * (2 genera, 12 species)
- Tribe **Homungellini** Timm, 1966 *
- Subtribe **Homungellinii** Timm, 1966 *
- Genus *Homungella* Timm, 1966 (9 species)
- Genus *Perodira* Baylis, 1943 (3 species)
- Family **Pharyngonematidae** Chitwood, 1950 (Timm, 1959) (1 subfamily, 3 genera, 4 species)
- Subfamily **Pharyngonematinae** Chitwood, 1950 (3 genera, 4 species)
- Tribe **Pharyngonematini** Chitwood, 1950 *

Subtribe **Pharyngonematinii** Chitwood, 1950 *

Genus *Athusia* Anwar & Jairajpuri, 1976 (2 species)

Genus *Macramphida* Timm, 1966 (1 species)

Genus *Pharyngonema* Pierantoni, 1923 (1 species)

Family **Creagrocercidae** Baylis, 1943 (1 subfamily, 1 genus, 1 species)

Subfamily **Creagrocercinae** Baylis, 1943 * (1 genus, 1 species)

Tribe **Creagrocercini** Baylis, 1943 *

Subtribe **Creagrocercinii** Baylis, 1943 *

Genus *Creagrocercus* Baylis, 1943 (1 species)

Family **Mesidionematidae** Poinar, 1978 (1 subfamily, 2 genera, 6 species)

Subfamily **Mesidionematinae** Poinar, 1978 * (2 genera, 6 species)

Tribe **Mesidionematini** Poinar, 1978 *

Subtribe **Mesidionematinii** Poinar, 1978 *

Genus *Mesidionema* Poinar, 1978 (3 species)

Genus *Nemanoke* Yeates & Spiridonov, 1996 (3 species)

Family **Scolecophilidae** Baylis, 1943 (1 subfamily, 1 genus, 4 species)

Subfamily **Scolecophilinae** Baylis, 1943 * (1 genus, 4 species)

Tribe **Scolecophilini** Baylis, 1943 *

Subtribe **Scolecophilinii** Baylis, 1943 *

Genus *Scolecophilus* Baylis & Daubney, 1922 (4 species)

Fossil taxon originally described as a nematode but now thought to be a seta of a larger organism⁵⁸³

Genus *Scorpiophagus* Stormer, 1963 (4 species)

Species *baculiformis* Stormer, 1963

Species *latus* Stormer, 1963

Endnotes

* nominotypical taxon not explicitly used by the author(s), and not used previously. I included to aid automated indexing.

Nominotypical taxa of lower rank than the original proposal which are not explicitly named in the original proposal of a name have only this identification. For example, a nominotypical subfamily automatically created under Article 36 of the ICZN but not explicitly named when a new family is created is designated as having the same author and date as that of the family, but in the text denoted by the additional mark “*”.

Nominotypical taxa of higher rank than the original proposal are explicitly identified by the additional identification “n. rank”. For example, a superfamily automatically created under Article 36 of the ICZN when a new family is created is designated as having the same author and date as that of the family, but in the text denoted by the addition of “n. rank” following the author name and date. When a name has been used explicitly previously at a different rank to the original proposal (either higher or lower, and including sub- or super-taxa), the author(s) first defining or using the name at the different taxonomic rank is cited in parentheses after the original author. Namea with no designation are the rank of the original proposal.
