ASHLEY A. DEDERICH, SUSAN E. HALBERT & CAROL D. VON DOHLEN (2022) Description of a new species of *Hamamelistes* forming galls on *Fothergilla* spp. (Hamamelidaceae) and the generic limits of Hormaphidini (Sternorrhyncha: Aphididae: Hormaphidinae). *Zootaxa*, 5183 (1), 203–219.

During the revision stage, an updated Figure 2 was inadvertently not incorporated into the final publication. Here we provide the updated figure, showing the correct specific epithet for the new *Hamamelistes* species.

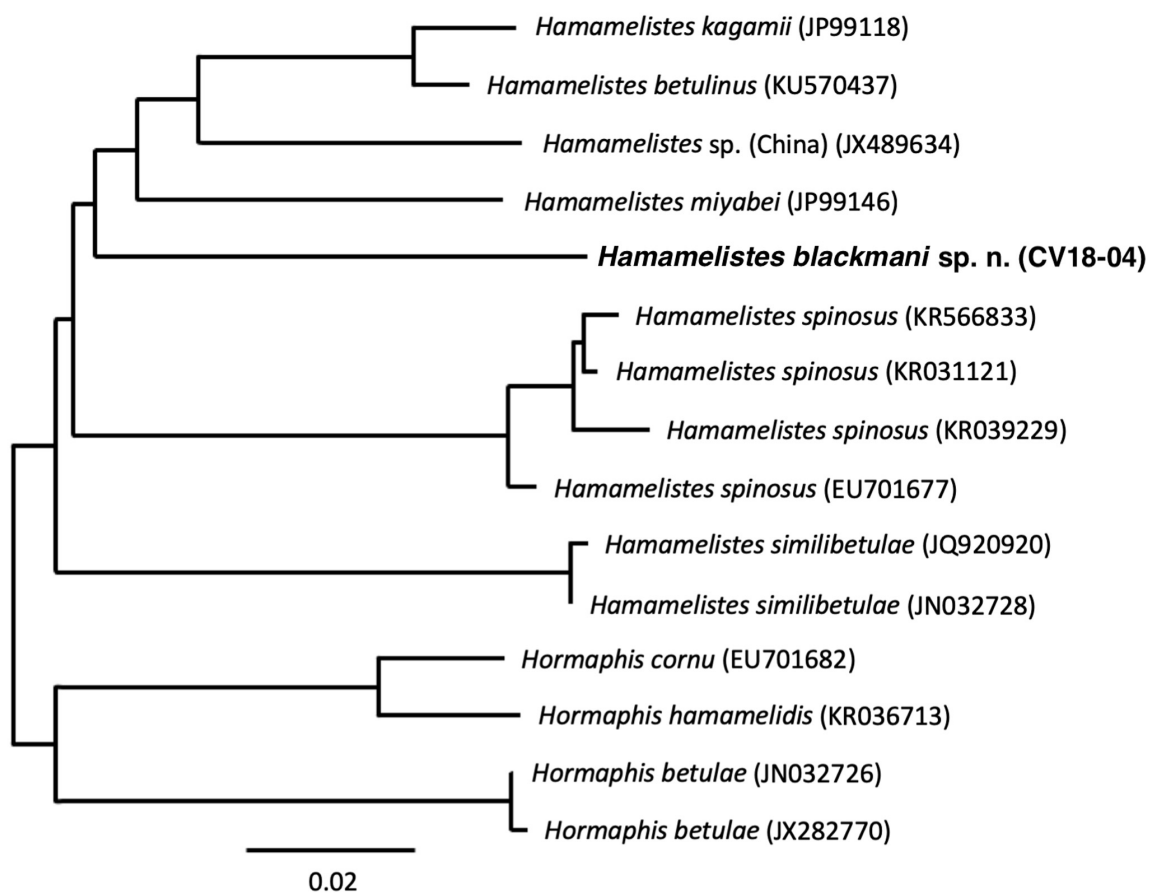

FIGURE 2. Neighbor-joining dendrogram from COI barcode DNA sequences, estimated under the K2P model of evolution. *Hamamelistes blackmani* sp. n. is shown in bold, clustered most closely to several Asian *Hamamelistes* species.
