LINDSAY W. POPPLE (2017) A revision of the *Ewartia oldfieldi* (Distant) species complex (Hemiptera: Cicadidae: Cicadettinae) with five new species from eastern and northern Australia. *Zootaxa*, 4263 (3): 401–449.

On page 432, the locality listed for the holotype of *Ewartia etesia* was erroneous. The error affected cross-referencing of localities for some of the paratypes listed on pages 432 and 433. A corrected type material list (including type locality) for *Ewartia etesia* is provided below, along with an image of the holotype specimen and labels (image provided by Suzanne Horner, Collections Manager, Natural Sciences, Museum and Art Gallery Northern Territory; reproduced with permission).
